SIMULATION STUDY
Name of the model   : (none)
Population size     : 10000
Agents' data        : (none)
Number of entities  : 0
Days (duration)     : 100 (of 100)
Number of viruses   : 1
Last run elapsed t  : 16.00ms
Last run speed      : 59.75 million agents x day / second
Rewiring            : off
Global events:
 (none)
Virus(es):
 - covid 19 (baseline prevalence: 50 seeds)
Tool(s):
 - vaccine (baseline prevalence: 50.00%)
Model parameters:
 (none)
Distribution of the population at time 100:
  - (0) Susceptible :  9950 -> 0
  - (1) Exposed     :    50 -> 0
  - (2) Recovered   :     0 -> 9399
  - (3) Removed     :     0 -> 601
Transition Probabilities:
 - Susceptible  0.87  0.13  0.00  0.00
 - Exposed      0.00  0.83  0.15  0.01
 - Recovered    0.00  0.00  1.00  0.00
 - Removed      0.00  0.00  0.00  1.00
```

Chapter 2

Benchmarking

Here we keep a list of scenarios where we compare epiworld with other ABM simulation engines. Although the comparison is made at the speed level, we also list features of capabilities and main differences between the engines.

Chapter 3

Contributor Code of Conduct

As contributors and maintainers of this project, we pledge to respect all people who contribute through reporting issues, posting feature requests, updating documentation, submitting pull requests or patches, and other activities.

We are committed to making participation in this project a harassment-free experience for everyone, regardless of level of experience, gender, gender identity and expression, sexual orientation, disability, personal appearance, body size, race, ethnicity, age, or religion.

Examples of unacceptable behavior by participants include the use of sexual language or imagery, derogatory comments or personal attacks, trolling, public or private harassment, insults, or other unprofessional conduct.

Project maintainers have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct. Project maintainers who do not follow the Code of Conduct may be removed from the project team.

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported by opening an issue or contacting one or more of the project maintainers.

This Code of Conduct is adapted from the Contributor Covenant (http://contributor-covenant.org), version 1.0.0, available at http://contributor-covenant.org/version/1/0/0/

Chapter 4

epiworld c++ template library

4.1 Main features

This C++ template-header-only library provides a general framework for epidemiologic simulation. The main features of the library are:

1. Four key classes: `Model`, `Person`, `Tool`, and `Virus`.
2. The model features a social networks of `Persons`.
3. `Persons` can have multiple `Tools` as a defense system.
4. `Tools` can reduce contagion rate, transmissibility, death rates, and improve recovery rates.
5. `Viruses` can mutate (generating new variants).
6. `Models` can feature multiple states, e.g., `HEALTHY`, `SUSCEPTIBLE`, etc.
7. `Models` can have an arbitrary number of parameters.
8. **REALLY FAST** About 6.5 Million person/day simulations per second.

4.2 Algorithm

Setup

- Create viruses.
- Create tools (arbitrary).
- Set model parameters (arbitrary).
- Create global events (e.g., surveillance).
- Set up the population: small world network (default).
- Set up rewiring (optional).
- Set states (arbitrary number of them).

Run

1. Distribute the tool(s) and virus(es)
2. For each t in 1 -> Duration:
    - Update state for susceptible/infected/removed(?)
    - Mutate virus(es) (each individual)
    - Run Global events (e.g., surveillance)
    - Run rewiring algorithm

Along update:

- Contagion events are applied recorded.
- New variants are recorded.
- Optional user data is recorded.

4.3 Hello world (C++)

```
#include "include/epiworld/epiworld.hpp"
int main()
{
  // Creating a virus
  epiworld::Virus<> covid19("covid 19", .01, true);
  covid19.set_infectiousness(.8);

  // Creating a tool
  epiworld::Tool<> vax("vaccine", .5, true);
  vax.set_contagion_reduction(.95);
  // Creating a model
  epiworld::Model<> model;
  // Adding the tool and virus
  model.add_virus(covid19);
  model.add_tool(vax);
  // Generating a random pop
  model.population_from_adjlist(
    epiworld::rgraph_smallworld(1000, 5, .2)
  );
  // Initializing setting days and seed
  model.init(60, 123123);
  // Running the model
  model.run();
  model.print();
  return;
}
```

4.4 Surveillance simulation

- Incubation time of the disease $\sim$ `Gamma(3, 1)`
- Duration of the disease $\sim$`Gamma(12, 1)`
- Probability of becoming symptomatic: 0.9
- Prob. of transmission: 1.0.
- Vaccinated population: 25%
- Vaccine efficacy: .9.
- Vaccine reduction on transmission: 0.5.
- Surveillance program of x% of the population at random.
- Individuals who test positive become isolated.

4.4.1 Preliminary results

```
# With low surveillance
pop_size <- 20e3
pop_seed <- pop_size * .01
s_levels <- c(0.0001, 0.002)
system(sprintf("./07-surveillance.o %i %i 100 %.04f 2>&1", pop_seed, pop_size, s_levels[1]), intern = TRUE)
       |>
  cat(sep = "\n")
```

```

  ))
)
ggplot(survdat, aes(x = Date, y = n + 1, colour = Type)) +
  geom_line() +
  facet_wrap(~Id) +
  scale_y_log10() +
  labs(y = "Counts (log)")
```

Chapter 5

General parameters

The following are parameters used for both ABM and Compartmental models.

```
EPI_BETA  <- 0.75
EPI_GAMMA <- 0.33
EPI_LATENCY <- 1/0.33
EPI_N     <- 10000
EPI_0     <- 0.01
EPI_NDAYS <- 50
Sys.setenv( # nolint
    EPI_BETA  = EPI_BETA,
    EPI_GAMMA = EPI_GAMMA,
    EPI_LATENCY = EPI_LATENCY,
    EPI_N     = EPI_N,
    EPI_0     = EPI_0,
    EPI_NDAYS = EPI_NDAYS
)
```

5.1 Compartmental Models

5.1.1 SIR Model

```
library(deSolve)
library(ggplot2)
library(data.table)
# Code from
# Chapter 2: SIR
# Book "Epidemics: Models and Data using R."
# By: Ottar N. Bjørnstad
sirmod <- function(t, y, parms) {
    # Pull state variables from the vector y
    S = y[1]
    I = y[2]
    R = y[3]

    # Pull parameter values from parms vector
    beta  = parms["beta"]
    mu    = parms["mu"]
    gamma = parms["gamma"]
    N     = parms["N"]

    # Define equations
    dS  = mu * (N - S) - beta * S * I/N
    dI  = beta * S * I/N - (mu + gamma) * I
    dR  = gamma * I - mu * R
    res = c(dS, dI, dR)

    # Return list of gradients
    list(res)
}
# Initial parameters
times <- seq(0, EPI_NDAYS, by = 1)
parms <- c(mu = 0, N = EPI_N, beta = EPI_BETA, gamma = EPI_GAMMA)
start <- c(S = EPI_N * (1 - EPI_0), I = EPI_N * EPI_0, R = 0)
out <- ode(y = start, times = times, func = sirmod, parms= parms)
out <- as.data.frame(out)
out <- rbind(
```

```
    with(out, data.table(date = time, state = "Susceptible", counts = S)),
    with(out, data.table(date = time, state = "Infected", counts = I)),
    with(out, data.table(date = time, state = "Recovered", counts = R))
)
```

Now we visualize the model

```
ggplot(out, aes(x = date, y = counts)) +
    geom_line(aes(colour = state)) +
    labs(title = "Compartmental SIR")
```

5.1.2 SEIR Model

```
# Code adapted from
# Chapter 2: SIR
# Book "Epidemics: Models and Data using R"
# By: Ottar N. Bjørnstad
seirmod <- function(t, y, parms) {
    # Pull state variables from y vector
    S = y[1]
    E = y[2]
    I = y[3]
    R = y[4]

    # Pull parameter values from parms vector
    beta  = parms["beta"]
    mu    = parms["mu"]
    alpha = parms["alpha"]
    gamma = parms["gamma"]
    N     = parms["N"]

    # Define equations
    dS  = mu * (N - S) - beta * S * I/N - mu * S
    dE  = beta * S * I/N - (mu + alpha) * E
    dI  = alpha * E - (mu + gamma) * I
    dR  = gamma * I - mu * R
    res = c(dS, dE, dI, dR)

    # Return list of gradients
    list(res)
}
# Initial parameters
parms <- c(
    mu = 0, N = EPI_N, beta = EPI_BETA,
    alpha = 1/EPI_LATENCY, gamma = EPI_GAMMA
    )
start <- c(S = EPI_N * (1 - EPI_0), E = EPI_N * EPI_0, I = 0, R = 0)
out_seir <- ode(y = start, times = times, func = seirmod, parms = parms)
out_seir <- as.data.frame(out_seir)
out_seir <- rbind(
    with(out_seir, data.table(date = time, state = "Susceptible", counts = S)),
    with(out_seir, data.table(date = time, state = "Exposed", counts = E)),
    with(out_seir, data.table(date = time, state = "Infected", counts = I)),
    with(out_seir, data.table(date = time, state = "Recovered", counts = R))
)
```

Now we visualize the model

```
ggplot(out_seir, aes(x = date, y = counts)) +
    geom_line(aes(colour = state)) +
    labs(title = "Compartmental SEIR")
```

5.2 Agent-Based Model Approach

Calculation of the expected number of days in state a when prob of changing state equals α is $1/\alpha$

```
set.seed(712)
a <- .3
R <- matrix(runif(2e5 * 50), ncol = 50)
dat <- apply(R, 1, \(x) {
    which.max(x < a)
})
mean(dat) - 1 / a
```

```
[1] -0.01049333
```

5.2.1 Mathematical preliminaries

That agent i becomes infected can be computed as follows:

At the same time, the probability of not becoming infected equals to the probability of no infected agent transmitting the infection. The probability that agent j infects i equals

In this case, β is parametrized such that its values are within $(0,1)$. Since transmission from the I infected agents happens independently, we finally have the following:

With the above equation, we can now calculate the change in the number of susceptible agents. In this case, it equals the expected number of new infections:

With the same parametrization in the canonical SIR model (Kermack and McKendrick), the instantaneous change in the number of susceptible agents equals $\frac{\delta}{\delta t}S = -S \beta I$. Given S and I, we can show that, as $\beta\downarrow 0$, i.e., the population grows, both rates converge to the same number. Formally:

The same can be shown for the change in the number recovered.

5.2.2 Simulation study

Now, what happens with `epiworld`.

```
system("./09-sir-connected.o -n $EPI_N -b $EPI_BETA -d $EPI_NDAYS -p $EPI_0 -r $EPI_GAMMA -i 1.0 -s555599")
library(ggplot2)
epiworld <- data.table::fread("total_hist.txt")
ggplot(epiworld, aes(x = date, y = counts)) +
    geom_line(aes(colour = state)) +
    labs(title = "ABM SIR")
system("./09-seir-connected.o -n $EPI_N -b $EPI_BETA -d $EPI_NDAYS -p $EPI_0 -r $EPI_GAMMA -i 1.0 -s555599
       -l $EPI_LATENCY")
library(ggplot2)
epiworld <- data.table::fread("total_hist.txt")
ggplot(epiworld, aes(x = date, y = counts)) +
    geom_line(aes(colour = state)) +
    labs(title = "ABM SEIR")
```

5.3 Comparing ABM with Compartmental Models

To this end, we will compare the results of the first run of the Compartmental model with 100 runs of the ABM, compute the confidence interval, and see how likely is the compartmental model to fall within the trajectory of the ABM simulation.

5.3.1 SIR

```
system("./09-sir-connected.o -n $EPI_N -b $EPI_BETA -d $EPI_NDAYS -p $EPI_0 -r $EPI_GAMMA -i 1.0 -s555599 -e
       100")
library(ggplot2)
library(data.table)
epiworld <- data.table::fread("09-sir-connected-experiments.csv")
epiworld <- epiworld[, .(
    min  = quantile(counts, probs = .025),
    mean = mean(counts),
    max  = quantile(counts, probs = .975)), by = .(date, state)]
# Merging Compartmental
epiworld <- merge(
    epiworld,
    out[, .(date = date, state = state, compartmental = counts)],
    by = c("date", "state")
)
setorder(epiworld, state, date)
ggplot(epiworld, aes(x = date, y = mean)) +
    geom_ribbon(aes(ymin = min, ymax = max, colour = state), alpha = 0.1) +
    geom_line(aes(x = date, y = compartmental, colour = sprintf("%s (compt)", state)))
```

It seems that, although both yield the same equilibria, compartmental models reach the highest point of the simulation earlier. This makes sense as within a single day of the ABM simulation, compartmental models have more events taking place. Nonetheless, as predicted, as $\beta\downarrow 0$, the differences become lesser. Furthermore, we could use the fact that the transition rates are known to compute an adjustment.

5.3.2 SEIR

```
system("./09-seir-connected.o -n $EPI_N -b $EPI_BETA -d $EPI_NDAYS -p $EPI_0 -r $EPI_GAMMA -i 1.0 -s555599
       -e 100 -l $EPI_LATENCY")
library(ggplot2)
library(data.table)
epiworld_seir <- data.table::fread("09-seir-connected-experiments.csv")
epiworld_seir <- epiworld_seir[, .(
    min  = quantile(counts, probs = .025),
    mean = mean(counts),
    max  = quantile(counts, probs = .975)), by = .(date, state)]
# Merging Compartmental
epiworld_seir <- merge(
    epiworld_seir,
    out_seir[, .(date = date, state = state, compartmental = counts)],
    by = c("date", "state")
)
setorder(epiworld_seir, state, date)
ggplot(epiworld_seir, aes(x = date, y = mean)) +
    geom_ribbon(aes(ymin = min, ymax = max, colour = state), alpha = 0.1) +
    geom_line(aes(x = date, y = compartmental, colour = sprintf("%s (compt)", state)))
```

5.3.3 Rates

```
S <- 1000
rate_comp <- function(I,B) S * B * I
rate_abm <- function(I,B) S * (1 - (1 - B)^I)
op <- par(mfrow = c(3, 2))
for (i in c(1, 10, 100)) {
    curve(rate_comp(i, x), from = .01, to = 0.05)
    curve(rate_abm(i, x), from = .01, to = 0.05, add = FALSE, lty = 2)
}
par(op)
```

Chapter 7

model1

The dynamics of the simulation process are:

1. Discrete Markov process.
2. The simulation has the following parameters:

   a. New variant emergence at rate `X.` b. For each variant `k`:

   - Unvaccinated individuals become sick rate `C(k),`
   - Mortality rate `D(k),`
   - Recovery rate `H(k),`
   - Vaccines have an efficaccy rate `E(v,k)` and pseudo vaccines (recovered) have efficacy rate `E(r,k) < E(v,k).` In general, the probability of `i` acquiring the disease `k` from `j` will be equal to

   ``` P(i gets the disease from j | their states) = C(k) * (1 - E(i,k)) * (1 - E(j, k)) ```

   where `(i,j) in (u,v,r).` Efficacy rate for unvaccinated is zero.

   - Vaccinated individuals have a reduced mortality rate `D(k,v) > D(k),` and recovered individuals `D(k,r) in (D(k,v), D(k)]`
   - Vaccinated individuals have an increased recovery rate `H(k,v) > H(k)`, whereas recovered's rate `H(k,r) in [H(k), H(k,v)).`

   The sum of mortality and recovery rates is less than one since the difference represents no change.

   c. Each country vaccinates citizens at rate `V` function of `A` (availability) and `B` (citizens' acceptance rate.) d. In each country `i,` the entire population `N(i)` distributes between the following states:

   - Healthy unvaccinated (`N(i,t,u)`),
   - Healthy vaccinated (`N(i,t,v)`),
   - Deceased (`N(i,t,d)`),
   - Recovered (`N(i,t,r)`),
   - Unvaccinated and sick with variant (`N(i,t,s,k|u)`) `k.`, and
   - Vaccinated and sick with variant (`N(i,t,s,k|v)`) `k.`

   Total sick are `N(i,t,k,s) = sum(g in {u,v}) N(i,t,k,s|g)`

   Globally, we keep track of the prevalence of new variants. Variants can disappear if no more individuals port the variant, i.e., the prevalence rate `P(k,t)=sum(i) N(i,s,k)` equals zero.

   d. Vaccines are manufactured at each country at rates `M(i)` and uniformly shared with other countries at rate `S(i).` c. Population flows between each country pair `(i,j)` at a rate `F(i,j).` Flows between countries do not change Population and are symmetric.
   ```

3. The simulation process is as follows:

   (a) Countries are initialized with a total population `N(i)`.

   (b) Variant zero initializes at a random location `i`, with an initial prevalence `P(k,t) = N(i,t,k)`.

   (c) For time `t` in `(0,T)` do:

   a. Unvaccinated individuals can become sick of variant `k` with probability:

   ``` Pr(h->s|i,t,k,u) ∼ sum(g in {u,v}) (N(i,t - 1,s,k|g) + sum(j != i) F(i,j) ∗ N(j,t-1,s,k|g)) ∗ C(k) / (N(i) + sum(j != i) N(j)) ```

   b. Vaccinated individuals can become sick of variant `k` with probability: `Pr(v->s|i,t,k,v) ∼ Pr(h->s|i,t,k) * (1 - E(v,k))`.

   b. Recovered individuals can become sick of variant `k` with probability: `Pr(v->s|i,t,k,r) ∼ Pr(h->s|i,t,k) * (1 - E(r,k))`.

   c. Sick individuals with variant `k` die with probability `D(k)` or recover with probability `H(k)`, otherwise they stay infected; with the rates depending on their vaccination status `v` or `n`.

   d. Unvaccinated individuals vaccinate in country `i` with probability `P(u->v) ∼ V(A(i,t), B(i))`.

   e. The country vaccine supply changes.
   ```

Chapter 8

Mixing probabilities in connected model

George G. Vega Yon, Ph.D. 2024-04-25

8.1 Case 1: No grouping

We will look into the probability of drawing infected individuals to simplify the algorithm. There are I infected individuals at any time in the simulation; thus, instead of drawing from $Bern(c/N, N)$, we will be drawing from $↩ Bern(c/N, I)$. The next step is to check which infected individuals should be drawn. Let's compare the distributions using the hypergeometric as an example:

```
set.seed(132)
nsims <- 1e4
N <- 400
rate <- 5
p <- rate/N
I <- 10
sim_complex <- parallel::mclapply(1:nsims, \(i) {
  nsamples <- rbinom(N, N, p)
  sum(rbinom(N, size = nsamples, prob = I/N) > 0)
}, mc.cores = 4L) |> unlist()
sim_simple <- parallel::mclapply(1:nsims, \(i) {
  sum(rbinom(N, I, p) > 0)
}, mc.cores = 4L) |> unlist()
op <- par(mfrow = c(1,2))
MASS::truehist(sim_complex)
MASS::truehist(sim_simple)
par(op)
quantile(sim_complex)
```

```
  0%  25%  50%  75% 100%
  27   43   47   51   71
```

```
quantile(sim_simple)
```

```
  0%  25%  50%  75% 100%
  23   43   47   51   71
```

```
plotter(sim_complex, sim_simple)
```

These two approaches are equivalent, but the second one is more efficient from the computational perspective.

8.2 Case 2: Grouping

This explores the case when we have mixing across groups. The question is if we can replicate the effect at the group level.

```
set.seed(123133)
ngroups <- 3
mixing <- matrix(
  c(0.1, 0.2, 0.3, 0.2, 0.1, 0.2, 0.3, 0.2, 0.1),
  nrow = ngroups,
  ncol = ngroups
  )
mixing <- mixing/rowSums(mixing)
mixing
```

```
          [,1]      [,2]      [,3]
[1,] 0.1666667 0.3333333 0.5000000
[2,] 0.4000000 0.2000000 0.4000000
[3,] 0.5000000 0.3333333 0.1666667
```

```
N <- 500
sizes <- c(100, 150, 250)
rate <- 5
p <- rate/N
I <- c(10, 30, 20)
ids <- rep.int(1:ngroups, times = sizes)
nsims <- 1e4
sim_complex <- parallel::mclapply(1:nsims, \(i) {
  # Sampling group first
  sapply(1:ngroups, \(g) {
    # How many each individual will sample from the groups
    ans <- rbinom(
      n = N, size = sizes[g], prob = mixing[ids,][,g] * p
      ) |> sum()
    # Sampling with replacement
    rbinom(ans, size = 1, prob = I[g]/sizes[g]) |> sum()
  }) |> sum()
}, mc.cores = 4L) |> unlist()
```

Using the alternative method in which we directly weight the probabilities:

```
sim_simple <- parallel::mclapply(1:nsims, \(i) {
  # Sampling group first
  sapply(1:ngroups, \(g) {
    rbinom(
      n = N, size = I[g], prob = mixing[cbind(ids,g)] * p
      ) |> sum()
  }) |> sum()
}, mc.cores = 4L) |> unlist()
op <- par(mfrow = c(1,2))
MASS::truehist(sim_complex)
MASS::truehist(sim_simple)
par(op)
quantile(sim_complex)
```

```
  0%  25%  50%  75% 100%
  57   88   94  101  131
```

```
quantile(sim_simple)
```

```
  0%  25%  50%  75% 100%
  58   87   94  101  135
```

```
plotter(sim_complex, sim_simple)
```

Chapter 9

EPI Simulator

9.1 Disease dynamics

Diseases continuously evolve in time. Changes in their genetic sequence make them more or less resistant to the particular version of the vaccine. Mutations also affect the transmissibility level and mortality rate of the disease. Using this approach allows making vaccination efficacy a function of compatibility between the variant and the vaccine.

When an individual becomes infected, the disease accumulates mutations in the new host. Ultimately, there is no single version of the disease present in the model, but rather an infinite number of them, each slightly different from the other.

9.2 Network dynamics

We can assume that the Population is organized in fully connected blocks for the first version of the model. Block sizes and the number of connections between blocks are Poisson random variables. Individuals interact with all the members of their blocks, and bridging individuals allow the disease to move across blocks.

9.3 Contagion dynamics

The transmission of the disease will be governed by the number of vaccinated, infected, and recovered within each block. Transmission between blocks will be treated in the same way, although individuals bridging the block will only interact with others within the block and their direct connections across the blocks.

9.4 Time dynamics

Time dynamics has two components, how biology evolves and how agents react.

The model develops as a continuous-time Markov process. Each block of individuals takes action at rates `L(i|N(i))` function of the local number of infections. This way, if

9.5 Updating agent's status

Like most other components, updating agents' states can be personalized. A naive approach allows agents to get infected with a single virus or stay as-is. The probability of this event is conditional on acquiring at most one virus. Since these are independent events, the conditional probability is computed as follows:

```
P(Variant k|at most 1) = P(at most 1| Variant k) * P(Variant k)/P(at most 1)
                       = P(only variant k)/P(variant k) * P(Variant k)/P(at most 1)
                       = P(only variant k)/P(at most 1)
```

Where

```
P(only variant k) = P(k) * Prod(m!=v) (1 - P(m))
P(at most 1) = P(None) + Sum(v in variants) P(v) * Prod(m != v) (1 - P(m))
P(None) = Prod(v in variants) (1 - P(v))
```

Furthermore, the (Variant, Person) pairs are treated independently.

9.5.1 Other parameters

- Who did you get the infection from.
- Omicron is 1.5 more infectious than delta.
- Surveillance:
  - Pull people to be tested at random.
  - Or at symptoms.
  - A mix of the two.
- Define a class for passing extra functions and datasets, for example, testing surveillance.
- Exposed people become infectious after k days.
- Network changesthe can be a function of an ERGM. Apply K steps throughout time.
- Add progress bar.

Chapter 14

Namespace Documentation

14.1 epiworld::sampler Namespace Reference

Functions for sampling viruses.

Functions

- template<typename TSeq >
  std::function< void(Agent< TSeq > *, Model< TSeq > *)> make_update_susceptible (std::vector< epiworld_fast_uint > exclude={})
  Make a function to sample from neighbors.
- template<typename TSeq = int>
  std::function< Virus< TSeq > *(Agent< TSeq > *, Model< TSeq > *)> make_sample_virus_neighbors (std::vector< epiworld_fast_uint > exclude={})
  Make a function to sample from neighbors.
- template<typename TSeq = int>
  Virus< TSeq > * sample_virus_single (Agent< TSeq > *p, Model< TSeq > *m)
  Sample from neighbors pool of viruses (at most one)

14.1.1 Detailed Description

Functions for sampling viruses.

14.1.2 Function Documentation

14.1.2.1 make_sample_virus_neighbors()

```
template<typename TSeq = int>
std::function<Virus<TSeq>*(Agent<TSeq>*,Model<TSeq>*)> epiworld::sampler::make_sample_↩
virus_neighbors (
            std::vector< epiworld_fast_uint > exclude = {} )  [inline]
```

Make a function to sample from neighbors.

This is akin to the function default_update_susceptible, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

TSeq	

Parameters

exclude	unsigned vector of states that need to be excluded from the sampling

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

14.1.2.2 make_update_susceptible()

```
template<typename TSeq >
std::function<void(Agent<TSeq>*,Model<TSeq>*)> epiworld::sampler::make_update_susceptible (
            std::vector< epiworld_fast_uint > exclude = {} )  [inline]
```

Make a function to sample from neighbors.

This is akin to the function default_update_susceptible, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

TSeq	

Parameters

exclude	unsigned vector of states that need to be excluded from the sampling

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

14.1.2.3 sample_virus_single()

```
template<typename TSeq = int>
Virus<TSeq>* epiworld::sampler::sample_virus_single (
            Agent< TSeq > * p,
            Model< TSeq > * m )  [inline]
```

Sample from neighbors pool of viruses (at most one)

This function samples at most one virus from the pool of viruses from its neighbors. If no virus is selected, the function returns a `nullptr`, otherwise it returns a pointer to the selected virus.

This can be used to build a new update function (EPI_NEW_UPDATEFUN.)

Template Parameters

TSeq	

Parameters

p	Pointer to person
m	Pointer to the model

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

14.2 sampler Namespace Reference

Functions for sampling viruses.

Functions

- template<typename TSeq >
  std::function< void(Agent< TSeq > *, Model< TSeq > *)> make_update_susceptible (std::vector< epiworld_fast_uint > exclude={})
  Make a function to sample from neighbors.
- template<typename TSeq = int>
  std::function< Virus< TSeq > *(Agent< TSeq > *, Model< TSeq > *)> make_sample_virus_neighbors (std::vector< epiworld_fast_uint > exclude={})
  Make a function to sample from neighbors.
- template<typename TSeq = int>
  Virus< TSeq > * sample_virus_single (Agent< TSeq > *p, Model< TSeq > *m)
  Sample from neighbors pool of viruses (at most one)

14.2.1 Detailed Description

Functions for sampling viruses.

14.2.2 Function Documentation

14.2.2.1 make_sample_virus_neighbors()

```
template<typename TSeq = int>
std::function<Virus<TSeq>*(Agent<TSeq>*,Model<TSeq>*)> sampler::make_sample_virus_neighbors
(
            std::vector< epiworld_fast_uint > exclude = {} )  [inline]
```

Make a function to sample from neighbors.

This is akin to the function default_update_susceptible, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

TSeq	

Parameters

exclude	unsigned vector of states that need to be excluded from the sampling

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

14.2.2.2 make_update_susceptible()

```
template<typename TSeq >
std::function<void(Agent<TSeq>*,Model<TSeq>*)> sampler::make_update_susceptible (
            std::vector< epiworld_fast_uint > exclude = {} )  [inline]
```

Make a function to sample from neighbors.

This is akin to the function default_update_susceptible, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

TSeq	

Parameters

exclude	unsigned vector of states that need to be excluded from the sampling

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

14.2.2.3 sample_virus_single()

```
template<typename TSeq = int>
Virus<TSeq>* sampler::sample_virus_single (
            Agent< TSeq > * p,
            Model< TSeq > * m )  [inline]
```

Sample from neighbors pool of viruses (at most one)

This function samples at most one virus from the pool of viruses from its neighbors. If no virus is selected, the function returns a `nullptr`, otherwise it returns a pointer to the selected virus.

This can be used to build a new update function (EPI_NEW_UPDATEFUN.)

Template Parameters

TSeq	

Parameters

p	Pointer to person
m	Pointer to the model

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

Chapter 15

Class Documentation

15.1 AdjList Class Reference

Public Member Functions

- AdjList (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)

  Construct a new Adj List object.
- **AdjList** (AdjList &&a)
- **AdjList** (const AdjList &a)
- AdjList & **operator=** (const AdjList &a)
- void read_edgelist (std::string fn, int size, int skip=0, bool directed=true)

  Read an edgelist.
- std::map< int, int > **operator()** (epiworld_fast_uint i) const
- void **print** (epiworld_fast_uint limit=20u) const
- size_t vcount () const

  Number of vertices/nodes in the network.
- size_t ecount () const

  Number of edges/arcs/ties in the network.
- std::vector< std::map< int, int > > & **get_dat** ()
- bool is_directed () const

  `true` *if the network is directed.*

15.1.1 Constructor & Destructor Documentation

15.1.1.1 AdjList()

```
AdjList::AdjList (
            const std::vector< int > & source,
            const std::vector< int > & target,
            int size,
            bool directed )  [inline]
```

Construct a new Adj List object.

Ids in the network are assume to range from `0` to `size - 1`.

Parameters

source	Unsigned int vector with the source
target	Unsigned int vector with the target
size	Number of vertices in the network.
directed	Bool true if the network is directed

15.1.2 Member Function Documentation

15.1.2.1 read_edgelist()

```
void AdjList::read_edgelist (
            std::string fn,
            int size,
            int skip = 0,
            bool directed = true )  [inline]
```

Read an edgelist.

Ids in the network are assume to range from `0` to `size - 1`.

Parameters

fn	Path to the file
skip	Number of lines to skip (e.g., 1 if there's a header)
directed	`true` if the network is directed
size	Number of vertices in the network.

The documentation for this class was generated from the following files:

- include/epiworld/adjlist-bones.hpp
- include/epiworld/adjlist-meat.hpp

15.2 epiworld::AdjList Class Reference

Public Member Functions

- AdjList (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)

  Construct a new Adj List object.
- **AdjList** (AdjList &&a)
- **AdjList** (const AdjList &a)
- AdjList & **operator=** (const AdjList &a)
- void read_edgelist (std::string fn, int size, int skip=0, bool directed=true)

  Read an edgelist.

- std::map< int, int > **operator()** (epiworld_fast_uint i) const
- void **print** (epiworld_fast_uint limit=20u) const
- size_t vcount () const

  Number of vertices/nodes in the network.
- size_t ecount () const

  Number of edges/arcs/ties in the network.
- std::vector< std::map< int, int > > & **get_dat** ()
- bool is_directed () const

  `true` *if the network is directed.*

15.2.1 Constructor & Destructor Documentation

15.2.1.1 AdjList()

```
AdjList::AdjList (
            const std::vector< int > & source,
            const std::vector< int > & target,
            int size,
            bool directed )  [inline]
```

Construct a new Adj List object.

Ids in the network are assume to range from `0` to `size - 1`.

Parameters

source	Unsigned int vector with the source
target	Unsigned int vector with the target
size	Number of vertices in the network.
directed	Bool true if the network is directed

15.2.2 Member Function Documentation

15.2.2.1 read_edgelist()

```
void AdjList::read_edgelist (
            std::string fn,
            int size,
            int skip = 0,
            bool directed = true )  [inline]
```

Read an edgelist.

Ids in the network are assume to range from `0` to `size - 1`.

Parameters

fn	Path to the file
skip	Number of lines to skip (e.g., 1 if there's a header)
directed	`true` if the network is directed
size	Number of vertices in the network.

The documentation for this class was generated from the following file:

- epiworld.hpp

15.3 Agent< TSeq > Class Template Reference

Agent (agents)

`#include <agent-bones.hpp>`

Public Member Functions

- **Agent** (Agent< TSeq > &&p)
- **Agent** (const Agent< TSeq > &p)
- Agent< TSeq > & **operator=** (const Agent< TSeq > &other_agent)
- int get_id () const

  Id of the individual.
- VirusPtr< TSeq > & **get_virus** ()
- const VirusPtr< TSeq > & **get_virus** () const
- ToolPtr< TSeq > & **get_tool** (int i)
- Tools< TSeq > **get_tools** ()

- bool **has_tool** (std::string name) const
- bool **has_tool** (const Tool< TSeq > &t) const
- bool **has_virus** (epiworld_fast_uint t) const
- bool **has_virus** (std::string name) const
- bool **has_virus** (const Virus< TSeq > &v) const
- bool **has_entity** (epiworld_fast_uint t) const
- bool **has_entity** (std::string name) const
- void **print** (Model< TSeq > *model, bool compressed=false) const
- Entities< TSeq > **get_entities** ()
- const Entities_const< TSeq > **get_entities** () const

- const Entity< TSeq > & **get_entity** (size_t i) const
- Entity< TSeq > & **get_entity** (size_t i)
- size_t **get_n_entities** () const
- bool **operator==** (const Agent< TSeq > &other) const
- bool **operator!=** (const Agent< TSeq > &other) const

Add/Remove Virus/Tool

Any of these is ultimately reflected at the end of the iteration.

Parameters

tool	*Tool to add*
virus	*Virus to add*
state_new	*state after the change*
queue	

- void **add_tool** (ToolPtr< TSeq > tool, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **add_tool** (Tool< TSeq > tool, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **set_virus** (VirusPtr< TSeq > virus, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **set_virus** (Virus< TSeq > virus, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **add_entity** (Entity< TSeq > &entity, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_tool** (epiworld_fast_uint tool_idx, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_tool** (ToolPtr< TSeq > &tool, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_virus** (Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_entity** (epiworld_fast_uint entity_idx, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_entity** (Entity< TSeq > &entity, Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void rm_agent_by_virus (Model< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)

  Agent removed by virus.

Get the rates (multipliers) for the agent

Parameters

v	*A pointer to a virus.*

Returns

epiworld_double

- epiworld_double **get_susceptibility_reduction** (VirusPtr< TSeq > v, Model< TSeq > *model)
- epiworld_double **get_transmission_reduction** (VirusPtr< TSeq > v, Model< TSeq > *model)
- epiworld_double **get_recovery_enhancer** (VirusPtr< TSeq > v, Model< TSeq > *model)
- epiworld_double **get_death_reduction** (VirusPtr< TSeq > v, Model< TSeq > *model)

- double & operator() (size_t j)

  Access the j-th column of the agent.
- double & **operator[ ]** (size_t j)
- double **operator()** (size_t j) const
- double **operator[ ]** (size_t j) const

Friends

- class **Model**< **TSeq** >

15.3.1 Detailed Description

template<typename TSeq>
class Agent< TSeq >

Agent (agents)

Template Parameters

TSeq	Sequence type (should match `TSeq` across the model)

15.3.2 Member Function Documentation

15.3.2.1 operator()()

```
template<typename TSeq >
double & Agent< TSeq >::operator() (
            size_t j )  [inline]
```

Access the j-th column of the agent.

If an external array has been specified, then these two functions can be used to access additional agent's features not included in the model.

The `operator[]` method is with no boundary check, whereas the `operator()` method checks boundaries. The former can result in a segfault.

Parameters

j	

Returns

double&

15.3.2.2 swap_neighbors()

```
template<typename TSeq >
void Agent< TSeq >::swap_neighbors (
            Agent< TSeq > & other,
            size_t n_this,
            size_t n_other )  [inline]
```

Swaps neighbors between the current agent and agent `other`

Parameters

other	
n_this	
n_other	

15.3.3 Friends And Related Function Documentation

15.3.3.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
            Event< TSeq > & a,
            Model< TSeq > * m )  [friend]
```

< Last entity of the agent

< Last agent of the entity

The documentation for this class was generated from the following files:

- include/epiworld/agent-bones.hpp
- include/epiworld/agent-meat.hpp

15.4 epiworld::Agent< TSeq > Class Template Reference

Agent (agents)

`#include <epiworld.hpp>`

Public Member Functions

- **Agent** (Agent< TSeq > &&p)

15.4.1 Detailed Description

template<typename TSeq>
class epiworld::Agent< TSeq >

Agent (agents)

Template Parameters

TSeq	Sequence type (should match `TSeq` across the model)

15.4.2 Member Function Documentation

15.4.2.1 operator()()

```
template<typename TSeq >
double & Agent< TSeq >::operator() (
            size_t j )  [inline]
```

Access the j-th column of the agent.

If an external array has been specified, then these two functions can be used to access additional agent's features not included in the model.

The `operator[]` method is with no boundary check, whereas the `operator()` method checks boundaries. The former can result in a segfault.

Parameters

j	

Returns

double&

15.4.2.2 swap_neighbors()

```
template<typename TSeq >
void Agent< TSeq >::swap_neighbors (
             Agent< TSeq > & other,
             size_t n_this,
             size_t n_other )  [inline]
```

Swaps neighbors between the current agent and agent `other`

Parameters

other	
n_this	
n_other	

15.4.3 Friends And Related Function Documentation

15.4.3.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
             Event< TSeq > & a,
             Model< TSeq > * m )  [friend]
```

< Last entity of the agent

< Last agent of the entity

The documentation for this class was generated from the following file:

- epiworld.hpp

15.5 AgentsSample< TSeq > Class Template Reference

Sample of agents.

`#include <agentssample-bones.hpp>`

15.5.1 Detailed Description

template<typename TSeq>
class AgentsSample< TSeq >

Sample of agents.

This class allows sampling agents from Entity<TSeq> and Model<TSeq>.

Template Parameters

TSeq	

15.5.2 Constructor & Destructor Documentation

15.5.2.1 AgentsSample()

```
template<typename TSeq >
AgentsSample< TSeq >::AgentsSample (
            Model< TSeq > * model,
            Agent< TSeq > & agent_,
            size_t n,
            std::vector< size_t > states_ = {},
            bool truncate = false )  [inline]
```

Sample from the agent's entities.

For example, how many individuals the agent contacts in a given point in time.

Template Parameters

TSeq	

Parameters

*agent_*	
n	Sample size
truncate	If the agent has fewer than `n` connections, then truncate = true will automatically reduce the number of possible samples. Otherwise, if false, then it returns an error.

The documentation for this class was generated from the following file:

- include/epiworld/agentssample-bones.hpp

15.6 epiworld::AgentsSample< TSeq > Class Template Reference

Sample of agents.

`#include <epiworld.hpp>`

15.6.1 Detailed Description

template<typename TSeq>
class epiworld::AgentsSample< TSeq >

Sample of agents.

This class allows sampling agents from Entity<TSeq> and Model<TSeq>.

Template Parameters

TSeq	

15.6.2 Constructor & Destructor Documentation

15.6.2.1 AgentsSample()

```
template<typename TSeq >
AgentsSample< TSeq >::AgentsSample (
            Model< TSeq > * model,
            Agent< TSeq > & agent_,
            size_t n,
            std::vector< size_t > states_ = {},
            bool truncate = false )  [inline]
```

Sample from the agent's entities.

For example, how many individuals the agent contacts in a given point in time.

Template Parameters

TSeq	

Parameters

*agent_*	
n	Sample size
truncate	If the agent has fewer than n connections, then truncate = true will automatically reduce the number of possible samples. Otherwise, if false, then it returns an error.

15.7.1 Detailed Description

template<typename TSeq>
class DataBase< TSeq >

Statistical data about the process.

Template Parameters

TSeq	

15.7.2 Member Function Documentation

15.7.2.1 generation_time()

```
template<typename TSeq >
void DataBase< TSeq >::generation_time (
            std::vector< int > & agent_id,
            std::vector< int > & virus_id,
            std::vector< int > & time,
            std::vector< int > & gentime ) const  [inline]
```

Get the generation time.

Calculates the generating time

Parameters

agent_id,virus_id,time,gentime	vectors where to save the values

The generation time is the time between the infection of the source and the infection of the target.

15.7.2.2 get_transmissions()

```
template<typename TSeq >
void DataBase< TSeq >::get_transmissions (
            std::vector< int > & date,
            std::vector< int > & source,
            std::vector< int > & target,
            std::vector< int > & virus,
            std::vector< int > & source_exposure_date ) const  [inline]
```

Get the transmissions object.

Parameters

date	
source	
target	
virus	
source_exposure_date	

15.7.2.3 operator==() [1/3]

```
bool DataBase< std::vector< int > >::operator== (
            const DataBase< std::vector< int >> & other ) const  [inline]
```

< Date of the transmission eve,

< Id of the sour,

< Id of the targ,

< Id of the varia,

< Date when the source acquired the varia,

15.7.2.4 operator==() [2/3]

```
bool DataBase< std::vector< int > >::operator== (
            const DataBase< std::vector< int >> & other ) const  [inline]
```

< Date of the transmission eve,

< Id of the sour,

< Id of the targ,

< Id of the varia,

< Date when the source acquired the varia,

15.7.2.5 operator==() [3/3]

```
template<typename TSeq >
bool DataBase< TSeq >::operator== (
            const DataBase< TSeq > & other ) const  [inline]
```

< Date of the transmission eve

< Id of the sour

< Id of the targ

< Id of the varia

< Date when the source acquired the varia

15.7.2.6 record_virus()

```
template<typename TSeq >
void DataBase< TSeq >::record_virus (
            Virus< TSeq > & v )  [inline]
```

Registering a new variant.

Parameters

v	Pointer to the new virus. Since viruses are originated in the agent, the numbers simply move around. From the parent virus to the new virus. And the total number of infected does not change.

15.7.2.7 reproductive_number()

```
template<typename TSeq >
MapVec_type< int, int > DataBase< TSeq >::reproductive_number  [inline]
```

Computes the reproductive number of each case.

By definition, whereas it computes R0 (basic reproductive number) or Rt/R (the effective reproductive number) will depend on whether the virus is allowed to circulate naïvely or not, respectively.

Parameters

fn	File where to write out the reproductive number.

15.7.2.8 transition_probability()

```
template<typename TSeq >
std::vector< epiworld_double > DataBase< TSeq >::transition_probability (
            bool print = true ) const  [inline]
```

Calculates the transition probabilities.

Returns

std::vector< epiworld_double >

The documentation for this class was generated from the following files:

- include/epiworld/database-bones.hpp
- include/epiworld/database-meat.hpp

15.8 epiworld::DataBase< TSeq > Class Template Reference

Statistical data about the process.

```
#include <epiworld.hpp>
```

15.8.1 Detailed Description

template<typename TSeq>
class epiworld::DataBase< TSeq >

Statistical data about the process.

Template Parameters

TSeq	

15.8.2 Member Function Documentation

15.8.2.1 generation_time()

```
template<typename TSeq >
void DataBase< TSeq >::generation_time (
             std::vector< int > & agent_id,
             std::vector< int > & virus_id,
             std::vector< int > & time,
             std::vector< int > & gentime ) const  [inline]
```

Get the generation time.

Calculates the generating time

Parameters

agent_id,virus_id,time,gentime	vectors where to save the values

The generation time is the time between the infection of the source and the infection of the target.

15.8.2.2 get_transmissions()

```
template<typename TSeq >
void DataBase< TSeq >::get_transmissions (
             std::vector< int > & date,
             std::vector< int > & source,
             std::vector< int > & target,
             std::vector< int > & virus,
             std::vector< int > & source_exposure_date ) const  [inline]
```

Get the transmissions object.

Parameters

date	
source	
target	
virus	
source_exposure_date	

15.8.2.3 operator==()

```
template<typename TSeq >
bool DataBase< TSeq >::operator== (
             const DataBase< TSeq > & other ) const  [inline]
```

< Date of the transmission eve

< Id of the sour

< Id of the targ

< Id of the varia

< Date when the source acquired the varia

15.8.2.4 record_virus()

```
template<typename TSeq >
void DataBase< TSeq >::record_virus (
            Virus< TSeq > & v )  [inline]
```

Registering a new variant.

Parameters

v	Pointer to the new virus. Since viruses are originated in the agent, the numbers simply move around. From the parent virus to the new virus. And the total number of infected does not change.

15.8.2.5 reproductive_number()

```
template<typename TSeq >
MapVec_type< int, int > DataBase< TSeq >::reproductive_number  [inline]
```

Computes the reproductive number of each case.

By definition, whereas it computes R0 (basic reproductive number) or Rt/R (the effective reproductive number) will depend on whether the virus is allowed to circulate naïvely or not, respectively.

Parameters

fn	File where to write out the reproductive number.

15.8.2.6 transition_probability()

```
template<typename TSeq >
std::vector< epiworld_double > DataBase< TSeq >::transition_probability (
            bool print = true ) const  [inline]
```

Calculates the transition probabilities.

Returns

std::vector< epiworld_double >

The documentation for this class was generated from the following file:

- epiworld.hpp

- void default_rm_entity (Event< TSeq > &a, Model< TSeq > *m)

15.13.1 Constructor & Destructor Documentation

15.13.1.1 Entity()

```
template<typename TSeq >
Entity< TSeq >::Entity (
            std::string name,
            EntityToAgentFun< TSeq > fun = nullptr )  [inline]
```

Constructs an Entity object.

This constructor initializes an Entity object with the specified parameters.

Parameters

name	The name of the entity.
fun	A function pointer to a function that maps the entity to an agent.

15.13.2 Friends And Related Function Documentation

15.13.2.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
            Event< TSeq > & a,
            Model< TSeq > * m )  [friend]
```

< Last entity of the agent

< Last agent of the entity

< Last entity of the agent

< Last agent of the entity

The documentation for this class was generated from the following files:

- include/epiworld/agent-bones.hpp
- include/epiworld/entity-bones.hpp
- include/epiworld/entity-meat.hpp

15.14 epiworld::Entity< TSeq > Class Template Reference

Public Member Functions

- Entity (std::string name, EntityToAgentFun< TSeq > fun=nullptr)

  Constructs an Entity object.
- void **add_agent** (Agent< TSeq > &p, Model< TSeq > *model)
- void **add_agent** (Agent< TSeq > *p, Model< TSeq > *model)
- void **rm_agent** (size_t idx, Model< TSeq > *model)
- size_t **size** () const noexcept
- void **set_location** (std::vector< epiworld_double > loc)
- std::vector< epiworld_double > & **get_location** ()
- std::vector< Agent< TSeq > * >::iterator **begin** ()
- std::vector< Agent< TSeq > * >::iterator **end** ()
- std::vector< Agent< TSeq > * >::const_iterator **begin** () const
- std::vector< Agent< TSeq > * >::const_iterator **end** () const
- size_t **operator[ ]** (size_t i)
- int **get_id** () const noexcept
- const std::string & **get_name** () const noexcept
- void **set_state** (epiworld_fast_int init, epiworld_fast_int post)
- void **set_queue** (epiworld_fast_int init, epiworld_fast_int post)
- void **get_state** (epiworld_fast_int *init, epiworld_fast_int *post)
- void **get_queue** (epiworld_fast_int *init, epiworld_fast_int *post)
- void **reset** ()
- bool **operator==** (const Entity< TSeq > &other) const
- bool **operator!=** (const Entity< TSeq > &other) const

Entity distribution

These functions are used for distributing agents among entities. The idea is to have a flexible way of distributing agents among entities.

- void **distribute** (Model< TSeq > *model)
- std::vector< size_t > & **get_agents** ()
- void **print** () const
- void **set_distribution** (EntityToAgentFun< TSeq > fun)

Friends

- class **Agent< TSeq >**
- class **AgentsSample< TSeq >**
- class **Model< TSeq >**
- void **default_add_entity** (Event< TSeq > &a, Model< TSeq > *m)
- void default_rm_entity (Event< TSeq > &a, Model< TSeq > *m)

15.14.1 Constructor & Destructor Documentation

15.14.1.1 Entity()

```
template<typename TSeq >
epiworld::Entity< TSeq >::Entity (
            std::string name,
            EntityToAgentFun< TSeq > fun = nullptr )  [inline]
```

Constructs an Entity object.

This constructor initializes an Entity object with the specified parameters.

Parameters

name	The name of the entity.
fun	A function pointer to a function that maps the entity to an agent.

15.14.2 Friends And Related Function Documentation

15.14.2.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
            Event< TSeq > & a,
            Model< TSeq > * m )  [friend]
```

< Last entity of the agent

< Last agent of the entity

The documentation for this class was generated from the following file:

- epiworld.hpp

15.15 epiworld::Event< TSeq > Struct Template Reference

Event data for update an agent.

`#include <epiworld.hpp>`

Public Member Functions

- Event (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_agent_, int idx_object_)

  Construct a new Event object.

Public Attributes

- Agent< TSeq > * **agent**
- VirusPtr< TSeq > **virus**
- ToolPtr< TSeq > **tool**
- Entity< TSeq > * **entity**
- epiworld_fast_int **new_state**
- epiworld_fast_int **queue**
- EventFun< TSeq > **call**
- int **idx_agent**
- int **idx_object**

15.15.1 Detailed Description

template<typename TSeq = EPI_DEFAULT_TSEQ>
struct epiworld::Event< TSeq >

Event data for update an agent.

Template Parameters

TSeq	

15.15.2 Constructor & Destructor Documentation

15.15.2.1 Event()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
epiworld::Event< TSeq >::Event (
            Agent< TSeq > * agent_,
            VirusPtr< TSeq > virus_,
            ToolPtr< TSeq > tool_,
            Entity< TSeq > * entity_,
            epiworld_fast_int new_state_,
            epiworld_fast_int queue_,
            EventFun< TSeq > call_,
            int idx_agent_,
            int idx_object_ )  [inline]
```

Construct a new Event object.

All the parameters are rather optional.

Parameters

*agent_*	Agent over who the action will happen
*virus_*	Virus to add
*tool_*	Tool to add
virus_idx	Index of virus to be removed (if needed)
tool_idx	Index of tool to be removed (if needed)
*new_↩ state_*	Next state
*queue_*	Efect on the queue
*call_*	The action call (if needed)
*idx_↩ agent_*	Location of agent in object.
*idx_↩ object_*	Location of object in agent.

The documentation for this struct was generated from the following file:

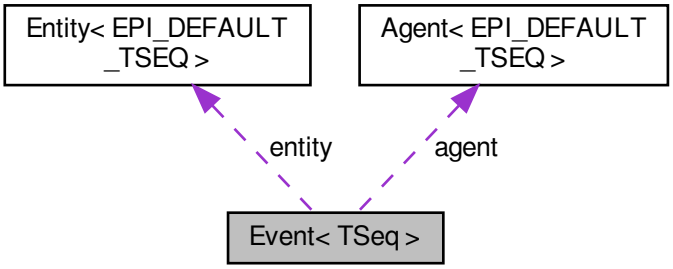
- epiworld.hpp

15.16 Event< TSeq > Struct Template Reference

Event data for update an agent.

```
#include <config.hpp>
```

Collaboration diagram for Event< TSeq >:



Public Member Functions

- Event (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_agent_, int idx_object_)

  Construct a new Event object.

Public Attributes

- Agent< TSeq > * **agent**
- VirusPtr< TSeq > **virus**
- ToolPtr< TSeq > **tool**
- Entity< TSeq > * **entity**
- epiworld_fast_int **new_state**

- int **idx_object**

15.16.1 Detailed Description

template<typename TSeq = EPI_DEFAULT_TSEQ>
struct Event< TSeq >

Event data for update an agent.

Template Parameters

TSeq	

15.16.2 Constructor & Destructor Documentation

15.16.2.1 Event()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
Event< TSeq >::Event (
            Agent< TSeq > * agent_,
            VirusPtr< TSeq > virus_,
            ToolPtr< TSeq > tool_,
            Entity< TSeq > * entity_,
            epiworld_fast_int new_state_,
            epiworld_fast_int queue_,
            EventFun< TSeq > call_,
            int idx_agent_,
            int idx_object_ )  [inline]
```

Construct a new Event object.

All the parameters are rather optional.

Parameters

*agent_*	Agent over who the action will happen
*virus_*	Virus to add
*tool_*	Tool to add
virus_idx	Index of virus to be removed (if needed)
tool_idx	Index of tool to be removed (if needed)
*new_state_*	Next state
*queue_*	Efect on the queue
*call_*	The action call (if needed)
*idx_agent_*	Location of agent in object.
*idx_object_*	Location of object in agent.

15.17 epiworld::GlobalEvent< TSeq > Class Template Reference

Template for a Global Event.

```
#include <epiworld.hpp>
```

Public Member Functions

- GlobalEvent (GlobalFun< TSeq > fun, std::string name, int day=-99)
  Construct a new Global Event object.
- void **operator()** (Model< TSeq > *m, int day)
- void **set_name** (std::string name)
- std::string **get_name** () const
- void **set_day** (int day)
- int **get_day** () const
- void **print** () const
- bool **operator==** (const GlobalEvent< TSeq > &other) const
- bool **operator!=** (const GlobalEvent< TSeq > &other) const

15.17.1 Detailed Description

template<typename TSeq>
class epiworld::GlobalEvent< TSeq >

Template for a Global Event.

Global events are functions that Model<TSeq> executes at the end of a day.

15.17.2 Constructor & Destructor Documentation

15.17.2.1 GlobalEvent()

```
template<typename TSeq >
GlobalEvent< TSeq >::GlobalEvent (
            GlobalFun< TSeq > fun,
            std::string name,
            int day = -99 )  [inline]
```

Construct a new Global Event object.

Parameters

fun	A function that takes a Model<TSeq> * as argument and returns void.
name	A descriptive name for the action.
day	The day when the action will be executed. If negative, it will be executed every day.

The documentation for this class was generated from the following file:

- epiworld.hpp

15.18 GlobalEvent< TSeq > Class Template Reference

Template for a Global Event.

`#include <globalevent-bones.hpp>`

Public Member Functions

- GlobalEvent (GlobalFun< TSeq > fun, std::string name, int day=-99)
  Construct a new Global Event object.
- void **operator()** (Model< TSeq > *m, int day)

- bool **operator!=** (const GlobalEvent< TSeq > &other) const

15.18.1 Detailed Description

template<typename TSeq>
class GlobalEvent< TSeq >

Template for a Global Event.

Global events are functions that Model<TSeq> executes at the end of a day.

15.18.2 Constructor & Destructor Documentation

15.18.2.1 GlobalEvent()

```
template<typename TSeq >
GlobalEvent< TSeq >::GlobalEvent (
            GlobalFun< TSeq > fun,
            std::string name,
            int day = -99 )  [inline]
```

Construct a new Global Event object.

Parameters

fun	A function that takes a Model<TSeq> * as argument and returns void.
name	A descriptive name for the action.
day	The day when the action will be executed. If negative, it will be executed every day.

15.22.1 Detailed Description

template<typename TData>
class LFMCMC< TData >

Likelihood-Free Markov Chain Monte Carlo.

Template Parameters

TData	Type of data that is generated

The documentation for this class was generated from the following files:

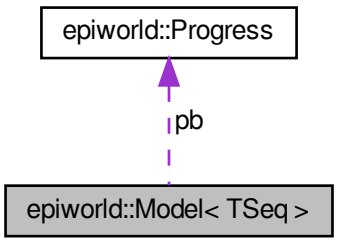
- include/epiworld/math/lfmcmc/lfmcmc-bones.hpp
- include/epiworld/math/lfmcmc/lfmcmc-meat-print.hpp
- include/epiworld/math/lfmcmc/lfmcmc-meat.hpp

15.23 epiworld::Model< TSeq > Class Template Reference

Core class of epiworld.

`#include <epiworld.hpp>`

Collaboration diagram for epiworld::Model< TSeq >:



Public Member Functions

- DataBase< TSeq > & **get_db** ()
- const DataBase< TSeq > & **get_db** () const
- epiworld_double & **operator()** (std::string pname)
- size_t **size** () const
- void load_agents_entities_ties (std::string fn, int skip)

  Associate agents-entities from a file.
- void load_agents_entities_ties (const std::vector< int > &agents_ids, const std::vector< int > &entities_ids)

  Associate agents-entities from data.
- void **load_agents_entities_ties** (const int *agents_id, const int *entities_id, size_t n)
- size_t get_n_viruses () const

  Number of viruses in the model.
- size_t get_n_tools () const

  Number of tools in the model.
- epiworld_fast_uint **get_ndays** () const
- epiworld_fast_uint **get_n_replicates** () const
- void **set_ndays** (epiworld_fast_uint ndays)
- bool **get_verbose** () const
- Model< TSeq > & **verbose_off** ()
- Model< TSeq > & **verbose_on** ()
- int today () const

  The current time of the model.
- void write_data (std::string fn_virus_info, std::string fn_virus_hist, std::string fn_tool_info, std::string fn_tool_hist, std::string fn_total_hist, std::string fn_transmission, std::string fn_transition, std::string fn_reproductive_number, std::string fn_generation_time) const

  Wrapper of `DataBase::write_data`
- std::map< std::string, epiworld_double > & **params** ()
- virtual void reset ()

Reset the model.

- const Model< TSeq > & **print** (bool lite=false) const

- void add_globalevent (std::function< void(Model< TSeq > *)> fun, std::string name="A global action", int date=-99)

  Set a global action.
- void **add_globalevent** (GlobalEvent< TSeq > action)
- GlobalEvent< TSeq > & get_globalevent (std::string name)

  Retrieve a global action by name.
- GlobalEvent< TSeq > & get_globalevent (size_t i)

  Retrieve a global action by index.
- void rm_globalevent (std::string name)

  Remove a global action by name.
- void rm_globalevent (size_t i)

  Remove a global action by index.
- void **run_globalevents** ()
- void **clear_state_set** ()
- const std::vector< VirusPtr< TSeq > > & **get_viruses** () const
- const std::vector< ToolPtr< TSeq > > & **get_tools** () const
- Virus< TSeq > & **get_virus** (size_t id)
- Tool< TSeq > & **get_tool** (size_t id)
- void set_agents_data (double *data_, size_t ncols_)

  Set the agents data object.
- double * **get_agents_data** ()
- size_t **get_agents_data_ncols** () const
- void set_name (std::string name)

  Set the name object.
- std::string **get_name** () const
- bool **operator==** (const Model< TSeq > &other) const
- bool **operator!=** (const Model< TSeq > &other) const
- void events_run ()

  Executes the stored action.

Set the backup object

`backup` *can be used to restore the entire object after a run. This can be useful if the user wishes to have individuals start with the same network from the beginning.*

- void **set_backup** ()

Random number generation

Parameters

eng	*Random number generator*
s	*Seed*

- void **set_rand_engine** (std::mt19937 &eng)
- std::mt19937 & **get_rand_endgine** ()
- void **seed** (size_t s)
- void **set_rand_norm** (epiworld_double mean, epiworld_double sd)
- void **set_rand_unif** (epiworld_double a, epiworld_double b)

- void **set_rand_exp** (epiworld_double lambda)
- void **set_rand_gamma** (epiworld_double alpha, epiworld_double beta)
- void **set_rand_lognormal** (epiworld_double mean, epiworld_double shape)
- void **set_rand_binom** (int n, epiworld_double p)
- epiworld_double **runif** ()
- epiworld_double **runif** (epiworld_double a, epiworld_double b)
- epiworld_double **rnorm** ()
- epiworld_double **rnorm** (epiworld_double mean, epiworld_double sd)
- epiworld_double **rgamma** ()
- epiworld_double **rgamma** (epiworld_double alpha, epiworld_double beta)
- epiworld_double **rexp** ()
- epiworld_double **rexp** (epiworld_double lambda)
- epiworld_double **rlognormal** ()
- epiworld_double **rlognormal** (epiworld_double mean, epiworld_double shape)
- int **rbinom** ()
- int **rbinom** (int n, epiworld_double p)

Add Virus/Tool to the model

This is done before the model has been initialized.

Parameters

v	*Virus to be added*
t	*Tool to be added*
preval	*Initial prevalence (initial state.) It can be specified as a proportion (between zero and one,) or an integer indicating number of individuals.*

- void **add_virus** (Virus< TSeq > &v)
- void **add_tool** (Tool< TSeq > &t)
- void **add_entity** (Entity< TSeq > e)
- void **rm_virus** (size_t virus_pos)
- void **rm_tool** (size_t tool_pos)
- void **rm_entity** (size_t entity_id)

Accessing population of the model

Parameters

fn	*std::string Filename of the edgelist file.*
skip	*int Number of lines to skip in `fn`.*
directed	*bool Whether the graph is directed or not.*
size	*Size of the network.*
al	*AdjList to read into the model.*

- void **agents_from_adjlist** (std::string fn, int size, int skip=0, bool directed=false)
- void **agents_from_edgelist** (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
- void **agents_from_adjlist** (AdjList al)
- bool **is_directed** () const
- std::vector< Agent< TSeq > > & get_agents ()

  Returns a reference to the vector of agents.
- Agent< TSeq > & **get_agent** (size_t i)
- std::vector< epiworld_fast_uint > get_agents_states () const

  Returns a vector with the states of the agents.
- std::vector< Viruses_const< TSeq > > get_agents_viruses () const

Returns a const vector with the viruses of the agents.

- std::vector< Viruses< TSeq > > get_agents_viruses ()

  Returns a vector with the viruses of the agents.
- std::vector< Entity< TSeq > > & **get_entities** ()
- Entity< TSeq > & **get_entity** (size_t entity_id, int *entity_pos=nullptr)
- Model< TSeq > & **agents_smallworld** (epiworld_fast_uint n=1000, epiworld_fast_uint k=5, bool d=false, epiworld_double p=.01)
- void **agents_empty_graph** (epiworld_fast_uint n=1000)

Functions to run the model

Parameters

seed	*Seed to be used for Pseudo-RNG.*
ndays	*Number of days (steps) of the simulation.*
fun	*In the case of `run_multiple`, a function that is called after each experiment.*

- void **update_state** ()
- void **mutate_virus** ()
- void **next** ()
- virtual Model< TSeq > & run (epiworld_fast_uint ndays, int seed=-1)

  Runs the simulation (after initialization)
- void run_multiple (epiworld_fast_uint ndays, epiworld_fast_uint nexperiments, int seed_=-1, std::function< void(size_t, Model< TSeq > *)> fun=make_save_run< TSeq >(), bool reset=true, bool verbose=true, int nthreads=1)

Rewire the network preserving the degree sequence.

This implementation assumes an undirected network, thus if {(i,j), (k,l)} -> {(i,l), (k,j)}, the reciprocal is also true, i.e., {(j,i), (l,k)} -> {(j,k), (l,i)}.

Parameters

proportion	*Proportion of ties to be rewired.*

Returns

A rewired version of the network.

- void **set_rewire_fun** (std::function< void(std::vector< Agent< TSeq >> *, Model< TSeq > *, epiworld_double)> fun)
- void **set_rewire_prop** (epiworld_double prop)
- epiworld_double **get_rewire_prop** () const
- void **rewire** ()

Export the network data in edgelist form

Parameters

fn	*std::string. File name.*
source	*Integer vector*
target	*Integer vector*

When passing the source and target, the function will write the edgelist on those.

- void **write_edgelist** (std::string fn) const
- void **write_edgelist** (std::vector< int > &source, std::vector< int > &target) const

Manage state (states) in the model

The functions `get_state` return the current values for the states included in the model.

Parameters

lab	*`std::string` Name of the state.*

Returns

`add_state*` returns nothing.

`get_state_*` returns a vector of pairs with the states and their labels.

- void **add_state** (std::string lab, UpdateFun< TSeq > fun=nullptr)
- const std::vector< std::string > & **get_states** () const
- const std::vector< UpdateFun< TSeq > > & **get_state_fun** () const
- void **print_state_codes** () const

Initial states

These functions are called before the simulation starts.

Parameters

proportions_	*Vector of proportions for each state.*
queue_	*Vector of queue for each state.*

- virtual Model< TSeq > & **initial_states** (std::vector< double >, std::vector< int >)

Setting and accessing parameters from the model

Tools can incorporate parameters included in the model. Internally, parameters in the tool are stored as pointers to an std::map<> of parameters in the model. Using the `epiworld_fast_uint` method directly fetches the parameters in the order these were added to the tool. Accessing parameters via the `std::string` method involves searching the parameter directly in the std::map<> member of the model (so it is not recommended.)

The `par()` function members are aliases for `get_param()`.

In the case of the function `read_params`, users can pass a file listing parameters to be included in the model. Each line in the file should have the following structure:

```
[name of parameter 1]: [value in double]
[name of parameter 2]: [value in double]
...
```

The only condition for parameter names is that these do not include a colon.

Parameters

initial_val	
pname	*Name of the parameter to add or to fetch*
fn	*Path to the file containing parameters*

Returns

The current value of the parameter in the model.

- epiworld_double **add_param** (epiworld_double initial_val, std::string pname)
- void **read_params** (std::string fn)
- epiworld_double **get_param** (epiworld_fast_uint k)
- epiworld_double **get_param** (std::string pname)
- void **set_param** (std::string pname, epiworld_double val)
- epiworld_double **par** (std::string pname) const

Set the user data object

Parameters

names	*string vector with the names of the variables.*

- void set_user_data (std::vector< std::string > names)
  [@
- void **add_user_data** (epiworld_fast_uint j, epiworld_double x)
- void **add_user_data** (std::vector< epiworld_double > x)
- UserData< TSeq > & **get_user_data** ()

Queuing system

When queueing is on, the model will keep track of which agents are either in risk of exposure or exposed. This then is used at each step to act only on the aforementioned agents.

- void queuing_on ()
  Activates the queuing system (default.)
- Model< TSeq > & queuing_off ()
  Deactivates the queuing system.
- bool is_queuing_on () const
  Query if the queuing system is on.
- Queue< TSeq > & get_queue ()
  Retrieve the `Queue` object.

Get the susceptibility reduction object

Parameters

v	

Returns

epiworld_double

- void **set_susceptibility_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_transmission_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_recovery_enhancer_mixer** (MixerFun< TSeq > fun)
- void **set_death_reduction_mixer** (MixerFun< TSeq > fun)

Protected Member Functions

- void **dist_tools** ()
- void **dist_virus** ()

- void **dist_entities** ()
- void **chrono_start** ()
- void **chrono_end** ()
- void events_add (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_↩ agent_, int idx_object_)

  Construct a new Event object.

Protected Attributes

- std::string name = ""

  Name of the model.
- DataBase< TSeq > **db** = DataBase<TSeq>(*this)
- std::vector< Agent< TSeq > > **population** = {}
- bool **using_backup** = true
- std::vector< Agent< TSeq > > **population_backup** = {}
- bool **directed** = false
- std::vector< VirusPtr< TSeq > > **viruses** = {}
- std::vector< ToolPtr< TSeq > > **tools** = {}
- std::vector< Entity< TSeq > > **entities** = {}
- std::vector< Entity< TSeq > > **entities_backup** = {}
- std::mt19937 **engine**
- std::uniform_real_distribution **runifd**
- std::normal_distribution **rnormd**
- std::gamma_distribution **rgammad**
- std::lognormal_distribution **rlognormald**
- std::exponential_distribution **rexpd**
- std::binomial_distribution **rbinomd**
- std::function< void(std::vector< Agent< TSeq >> *, Model< TSeq > *, epiworld_double)> **rewire_fun**
- epiworld_double **rewire_prop** = 0.0
- std::map< std::string, epiworld_double > **parameters**
- epiworld_fast_uint **ndays** = 0
- Progress **pb**
- std::vector< UpdateFun< TSeq > > state_fun = {}

  Functions to update states.
- std::vector< std::string > states_labels = {}

  Labels of the states.
- std::function< void(Model< TSeq > *)> initial_states_fun
- epiworld_fast_uint **nstates** = 0u
- bool **verbose** = true
- int **current_date** = 0
- std::chrono::time_point< std::chrono::steady_clock > **time_start**
- std::chrono::time_point< std::chrono::steady_clock > **time_end**
- std::chrono::duration< epiworld_double, std::micro > **time_elapsed**
- epiworld_fast_uint **n_replicates** = 0u
- std::vector< GlobalEvent< TSeq > > **globalevents**
- Queue< TSeq > **queue**
- bool **use_queuing** = true
- std::vector< Event< TSeq > > events = {}

  Variables used to keep track of the events to be made regarding viruses.
- epiworld_fast_uint **nactions** = 0u

Auxiliary variables for AgentsSample<TSeq> iterators

These variables+objects are used by the AgentsSample<TSeq> class for building efficient iterators over agents. The idea is to reduce the memory allocation, so only during the first call of AgentsSample<TSeq>::AgentsSample(Model<TSeq>) these vectors are allocated.

- std::vector< Agent< TSeq > * > **sampled_population**
- size_t **sampled_population_n** = 0u
- std::vector< size_t > **population_left**
- size_t **population_left_n** = 0u

Agents features

Optionally, a model can include an external data source pointing to agents information. The data can then be access through the `Agent::operator()` method.

- double * **agents_data** = nullptr
- size_t **agents_data_ncols** = 0u

Friends

- class **Agent**< **TSeq** >
- class **AgentsSample**< **TSeq** >
- class **DataBase**< **TSeq** >
- class **Queue**< **TSeq** >

Tool Mixers

These functions combine the effects tools have to deliver a single effect. For example, wearing a mask, been vaccinated, and the immune system combine together to jointly reduce the susceptibility for a given virus.

- MixerFun< TSeq > **susceptibility_reduction_mixer** = susceptibility_reduction_mixer_default<TSeq>
- MixerFun< TSeq > **transmission_reduction_mixer** = transmission_reduction_mixer_default<TSeq>
- MixerFun< TSeq > **recovery_enhancer_mixer** = recovery_enhancer_mixer_default<TSeq>
- MixerFun< TSeq > **death_reduction_mixer** = death_reduction_mixer_default<TSeq>
- std::vector< epiworld_double > **array_double_tmp**
- std::vector< Virus< TSeq > * > **array_virus_tmp**
- std::vector< int > **array_int_tmp**
- virtual Model< TSeq > * clone_ptr ()

  Advanced usage: Makes a copy of data and returns it as undeleted pointer.
- **Model** ()
- **Model** (const Model< TSeq > &m)
- **Model** (Model< TSeq > &m)
- **Model** (Model< TSeq > &&m)
- Model< TSeq > & **operator=** (const Model< TSeq > &m)
- virtual ~**Model** ()

15.23.1 Detailed Description

template<typename TSeq>
class epiworld::Model< TSeq >

Core class of epiworld.

The model class provides the wrapper that puts together `Agent`, `Virus`, and `Tools`.

Template Parameters

TSeq	Type of sequence. In principle, users can build models in which virus and human sequence is represented as numeric vectors (if needed.)

15.23.2 Member Function Documentation

15.23.2.1 add_globalevent()

```
template<typename TSeq >
void Model< TSeq >::add_globalevent (
             std::function< void(Model< TSeq > *)> fun,
             std::string name = "A global action",
             int date = -99 )  [inline]
```

Set a global action.

Parameters

fun	A function to be called on the prescribed date
name	Name of the action.
date	Integer indicating when the function is called (see details)

When date is less than zero, then the function is called at the end of every day. Otherwise, the function will be called only at the end of the indicated date.

15.23.2.2 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * Model< TSeq >::clone_ptr  [inline], [protected], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented in ModelSIRMixing< TSeq >, ModelSIRLogit< TSeq >, ModelSIRDCONN< TSeq >, ModelSIRCONN< TSeq >, ModelSEIRMixing< TSeq >, ModelSEIRDCONN< TSeq >, ModelSEIRCONN< TSeq >, epiworld::epimodels::ModelSIRMixing< T epiworld::epimodels::ModelSEIRMixing< TSeq >, epiworld::epimodels::ModelSIRLogit< TSeq >, epiworld::epimodels::ModelSEIRD epiworld::epimodels::ModelSIRDCONN< TSeq >, epiworld::epimodels::ModelSEIRCONN< TSeq >, and epiworld::epimodels::ModelSIRCONN< TSeq >.

15.23.2.3 events_add()

```
template<typename TSeq >
void Model< TSeq >::events_add (
            Agent< TSeq > * agent_,
            VirusPtr< TSeq > virus_,
            ToolPtr< TSeq > tool_,
            Entity< TSeq > * entity_,
            epiworld_fast_int new_state_,
            epiworld_fast_int queue_,
            EventFun< TSeq > call_,
            int idx_agent_,
            int idx_object_ )  [inline], [protected]
```

Construct a new Event object.

Parameters

*agent_*	Agent over which the action will be called
*virus_*	Virus pointer included in the action
*tool_*	Tool pointer included in the action
*entity_*	Entity pointer included in the action
*new_state_*	New state of the agent
*call_*	Function the action will call
*queue_*	Change in the queue
*idx_agent_*	Location of agent in object.
*idx_object_*	Location of object in agent.

15.23.2.4 events_run()

```
template<typename TSeq >
void Model< TSeq >::events_run  [inline]
```

Executes the stored action.

Parameters

*model_*	Model over which it will be executed.

15.23.2.5 load_agents_entities_ties()

```
template<typename TSeq >
void Model< TSeq >::load_agents_entities_ties (
```

```
            std::string fn,
            int skip )  [inline]
```

Associate agents-entities from a file.

The structure of the file should be two columns separated by space. The first column indexing between 0 and nagents-1, and the second column between 0 and nentities - 1.

Parameters

fn	Path to the file.
skip	How many rows to skip.

15.23.2.6 reset()

```
template<typename TSeq >
void Model< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented in ModelSIRMixing< TSeq >, ModelSIRLogit< TSeq >, ModelSIRDCONN< TSeq >, ModelSIRCONN< TSeq >, ModelSEIRMixing< TSeq >, ModelSEIRDCONN< TSeq >, ModelSEIRCONN< TSeq >, epiworld::epimodels::ModelSIRMixing< T epiworld::epimodels::ModelSEIRMixing< TSeq >, epiworld::epimodels::ModelSIRLogit< TSeq >, epiworld::epimodels::ModelSEIRD epiworld::epimodels::ModelSIRDCONN< TSeq >, epiworld::epimodels::ModelSEIRCONN< TSeq >, and epiworld::epimodels::ModelSIRCONN< TSeq >.

15.23.2.7 run_multiple()

```
template<typename TSeq >
void Model< TSeq >::run_multiple (
            epiworld_fast_uint ndays,
            epiworld_fast_uint nexperiments,
            int seed_ = -1,
            std::function< void(size_t, Model< TSeq > *)> fun = make_save_run<TSeq>(),
            bool reset = true,
            bool verbose = true,
            int nthreads = 1 )  [inline]
```

Parameters

ndays	Multiple runs of the simulation

15.23.2.8 set_agents_data()

```
template<typename TSeq >
void Model< TSeq >::set_agents_data (
            double * data_,
            size_t ncols_ )  [inline]
```

Set the agents data object.

The data should be an array with the data stored in a column major order, i.e., by column.

Parameters

*data_*	Pointer to the first element of an array of size `size() * ncols_`.
*ncols_*	Number of features included in the data.

15.23.2.9 set_name()

```
template<typename TSeq >
void Model< TSeq >::set_name (
            std::string name )  [inline]
```

Set the name object.

Parameters

name	

15.23.2.10 write_data()

```
template<typename TSeq >
void Model< TSeq >::write_data (
            std::string fn_virus_info,
            std::string fn_virus_hist,
            std::string fn_tool_info,
            std::string fn_tool_hist,
```

```
            std::string fn_total_hist,
            std::string fn_transmission,
            std::string fn_transition,
            std::string fn_reproductive_number,
            std::string fn_generation_time ) const  [inline]
```

Wrapper of `DataBase::write_data`

Parameters

fn_virus_info	Filename. Information about the virus.
fn_virus_hist	Filename. History of the virus.
fn_tool_info	Filename. Information about the tool.
fn_tool_hist	Filename. History of the tool.
fn_total_hist	Filename. Aggregated history (state)
fn_transmission	Filename. Transmission history.
fn_transition	Filename. Markov transition history.
fn_reproductive_number	Filename. Case by case reproductive number

15.23.3 Member Data Documentation

15.23.3.1 initial_states_fun

```
template<typename TSeq >
std::function<void(Model<TSeq>*)> epiworld::Model< TSeq >::initial_states_fun  [protected]
```

Initial value:

```
= [](Model<TSeq> * )
    -> void {}
```

Function to distribute states. Goes along with the function

15.23.3.2 rbinomd

```
template<typename TSeq >
std::binomial_distribution epiworld::Model< TSeq >::rbinomd  [protected]
```

Initial value:

```
=
        std::binomial_distribution<>()
```

15.23.3.3 rexpd

```
template<typename TSeq >
std::exponential_distribution epiworld::Model< TSeq >::rexpd  [protected]
```

Initial value:

```
=
        std::exponential_distribution<>()
```

15.23.3.4 rgammad

```
template<typename TSeq >
std::gamma_distribution epiworld::Model< TSeq >::rgammad  [protected]
```

Initial value:

```
=
        std::gamma_distribution<>()
```

15.23.3.5 rlognormald

```
template<typename TSeq >
std::lognormal_distribution epiworld::Model< TSeq >::rlognormald  [protected]
```

Initial value:

```
=
        std::lognormal_distribution<>()
```

15.23.3.6 rnormd

```
template<typename TSeq >
std::normal_distribution epiworld::Model< TSeq >::rnormd  [protected]
```

Initial value:

```
=
        std::normal_distribution<>(0.0)
```

15.23.3.7 runifd

```
template<typename TSeq >
std::uniform_real_distribution epiworld::Model< TSeq >::runifd  [protected]
```

Initial value:

```
=
        std::uniform_real_distribution<> (0.0, 1.0)
```

15.23.3.8 time_elapsed

```
template<typename TSeq >
std::chrono::duration<epiworld_double,std::micro> epiworld::Model< TSeq >::time_elapsed  [protected]
```

Initial value:

```
=
        std::chrono::duration<epiworld_double,std::micro>::zero()
```

The documentation for this class was generated from the following file:

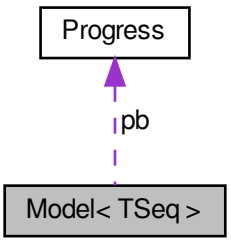
- epiworld.hpp

15.24 Model< TSeq > Class Template Reference

Core class of epiworld.

`#include <model-bones.hpp>`

Collaboration diagram for Model< TSeq >:



Public Member Functions

- DataBase< TSeq > & **get_db** ()
- const DataBase< TSeq > & **get_db** () const
- epiworld_double & **operator()** (std::string pname)

- void set_name (std::string name)

  Set the name object.
- std::string **get_name** () const
- bool **operator==** (const Model< TSeq > &other) const
- bool **operator!=** (const Model< TSeq > &other) const
- void events_run ()

  Executes the stored action.

Set the backup object

`backup` *can be used to restore the entire object after a run. This can be useful if the user wishes to have individuals start with the same network from the beginning.*

- void **set_backup** ()

Random number generation

Parameters

eng	*Random number generator*
s	*Seed*

- void **set_rand_engine** (std::mt19937 &eng)
- std::shared_ptr< std::mt19937 > & **get_rand_endgine** ()
- void **seed** (size_t s)
- void **set_rand_norm** (epiworld_double mean, epiworld_double sd)
- void **set_rand_unif** (epiworld_double a, epiworld_double b)

- void **set_rand_exp** (epiworld_double lambda)
- void **set_rand_gamma** (epiworld_double alpha, epiworld_double beta)
- void **set_rand_lognormal** (epiworld_double mean, epiworld_double shape)
- void **set_rand_binom** (int n, epiworld_double p)
- epiworld_double **runif** ()
- epiworld_double **runif** (epiworld_double a, epiworld_double b)
- epiworld_double **rnorm** ()
- epiworld_double **rnorm** (epiworld_double mean, epiworld_double sd)
- epiworld_double **rgamma** ()
- epiworld_double **rgamma** (epiworld_double alpha, epiworld_double beta)
- epiworld_double **rexp** ()
- epiworld_double **rexp** (epiworld_double lambda)
- epiworld_double **rlognormal** ()
- epiworld_double **rlognormal** (epiworld_double mean, epiworld_double shape)
- int **rbinom** ()
- int **rbinom** (int n, epiworld_double p)

Add Virus/Tool to the model

This is done before the model has been initialized.

Parameters

v	*Virus to be added*
t	*Tool to be added*
preval	*Initial prevalence (initial state.) It can be specified as a proportion (between zero and one,) or an integer indicating number of individuals.*

- void **add_virus** (Virus< TSeq > &v)
- void **add_tool** (Tool< TSeq > &t)
- void **add_entity** (Entity< TSeq > e)
- void **rm_virus** (size_t virus_pos)
- void **rm_tool** (size_t tool_pos)
- void **rm_entity** (size_t entity_id)

Accessing population of the model

Parameters

fn	*std::string Filename of the edgelist file.*
skip	*int Number of lines to skip in* `fn`.
directed	*bool Whether the graph is directed or not.*
size	*Size of the network.*
al	*AdjList to read into the model.*

- void **agents_from_adjlist** (std::string fn, int size, int skip=0, bool directed=false)
- void **agents_from_edgelist** (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
- void **agents_from_adjlist** (AdjList al)
- bool **is_directed** () const
- std::vector< Agent< TSeq > > & get_agents ()

  Returns a reference to the vector of agents.
- Agent< TSeq > & **get_agent** (size_t i)
- std::vector< epiworld_fast_uint > get_agents_states () const

  Returns a vector with the states of the agents.
- std::vector< Viruses_const< TSeq > > get_agents_viruses () const

Returns a const vector with the viruses of the agents.

- std::vector< Viruses< TSeq > > get_agents_viruses ()

  Returns a vector with the viruses of the agents.
- std::vector< Entity< TSeq > > & **get_entities** ()
- Entity< TSeq > & **get_entity** (size_t entity_id, int *entity_pos=nullptr)
- Model< TSeq > & **agents_smallworld** (epiworld_fast_uint n=1000, epiworld_fast_uint k=5, bool d=false, epiworld_double p=.01)
- void **agents_empty_graph** (epiworld_fast_uint n=1000)

Functions to run the model

Parameters

seed	*Seed to be used for Pseudo-RNG.*
ndays	*Number of days (steps) of the simulation.*
fun	*In the case of `run_multiple`, a function that is called after each experiment.*

- void **update_state** ()
- void **mutate_virus** ()
- void **next** ()
- virtual Model< TSeq > & run (epiworld_fast_uint ndays, int seed=-1)

  Runs the simulation (after initialization)
- void run_multiple (epiworld_fast_uint ndays, epiworld_fast_uint nexperiments, int seed_=-1, std::function< void(size_t, Model< TSeq > *)> fun=make_save_run< TSeq >(), bool reset=true, bool verbose=true, int nthreads=1)

Rewire the network preserving the degree sequence.

This implementation assumes an undirected network, thus if {(i,j), (k,l)} -> {(i,l), (k,j)}, the reciprocal is also true, i.e., {(j,i), (l,k)} -> {(j,k), (l,i)}.

Parameters

proportion	*Proportion of ties to be rewired.*

Returns

A rewired version of the network.

- void **set_rewire_fun** (std::function< void(std::vector< Agent< TSeq >> *, Model< TSeq > *, epiworld_double)> fun)
- void **set_rewire_prop** (epiworld_double prop)
- epiworld_double **get_rewire_prop** () const
- void **rewire** ()

Export the network data in edgelist form

Parameters

fn	*std::string. File name.*
source	*Integer vector*
target	*Integer vector*

When passing the source and target, the function will write the edgelist on those.

- void **write_edgelist** (std::string fn) const
- void **write_edgelist** (std::vector< int > &source, std::vector< int > &target) const

Manage state (states) in the model

The functions `get_state` return the current values for the states included in the model.

Parameters

lab	*`std::string` Name of the state.*

Returns

`add_state*` returns nothing.

`get_state_*` returns a vector of pairs with the states and their labels.

- void **add_state** (std::string lab, UpdateFun< TSeq > fun=nullptr)
- const std::vector< std::string > & **get_states** () const
- const std::vector< UpdateFun< TSeq > > & **get_state_fun** () const
- void **print_state_codes** () const

Initial states

These functions are called before the simulation starts.

Parameters

proportions_	*Vector of proportions for each state.*
queue_	*Vector of queue for each state.*

- virtual Model< TSeq > & **initial_states** (std::vector< double >, std::vector< int >)

Setting and accessing parameters from the model

Tools can incorporate parameters included in the model. Internally, parameters in the tool are stored as pointers to an std::map<> of parameters in the model. Using the `epiworld_fast_uint` method directly fetches the parameters in the order these were added to the tool. Accessing parameters via the `std::string` method involves searching the parameter directly in the std::map<> member of the model (so it is not recommended.)

The `par()` function members are aliases for `get_param()`.

In the case of the function `read_params`, users can pass a file listing parameters to be included in the model. Each line in the file should have the following structure:

```
[name of parameter 1]: [value in double]
[name of parameter 2]: [value in double]
...
```

The only condition for parameter names is that these do not include a colon.

Parameters

initial_val	
pname	*Name of the parameter to add or to fetch*
fn	*Path to the file containing parameters*

Returns

The current value of the parameter in the model.

- epiworld_double **add_param** (epiworld_double initial_val, std::string pname)
- void **read_params** (std::string fn)
- epiworld_double **get_param** (epiworld_fast_uint k)
- epiworld_double **get_param** (std::string pname)
- void **set_param** (std::string pname, epiworld_double val)
- epiworld_double **par** (std::string pname) const

Set the user data object

Parameters

names	*string vector with the names of the variables.*

- void set_user_data (std::vector< std::string > names)
  [@
- void **add_user_data** (epiworld_fast_uint j, epiworld_double x)
- void **add_user_data** (std::vector< epiworld_double > x)
- UserData< TSeq > & **get_user_data** ()

Queuing system

When queueing is on, the model will keep track of which agents are either in risk of exposure or exposed. This then is used at each step to act only on the aforementioned agents.

- void queuing_on ()
  Activates the queuing system (default.)
- Model< TSeq > & queuing_off ()
  Deactivates the queuing system.
- bool is_queuing_on () const
  Query if the queuing system is on.
- Queue< TSeq > & get_queue ()
  Retrieve the `Queue` object.

Get the susceptibility reduction object

Parameters

v	

Returns

epiworld_double

- void **set_susceptibility_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_transmission_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_recovery_enhancer_mixer** (MixerFun< TSeq > fun)
- void **set_death_reduction_mixer** (MixerFun< TSeq > fun)

Protected Member Functions

- void **dist_tools** ()
- void **dist_virus** ()

- void **dist_entities** ()
- void **chrono_start** ()
- void **chrono_end** ()
- void events_add (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_↩ agent_, int idx_object_)

  Construct a new Event object.

Protected Attributes

- std::string name = ""

  Name of the model.
- DataBase< TSeq > **db** = DataBase<TSeq>(*this)
- std::vector< Agent< TSeq > > **population** = {}
- bool **using_backup** = true
- std::vector< Agent< TSeq > > **population_backup** = {}
- bool **directed** = false
- std::vector< VirusPtr< TSeq > > **viruses** = {}
- std::vector< ToolPtr< TSeq > > **tools** = {}
- std::vector< Entity< TSeq > > **entities** = {}
- std::vector< Entity< TSeq > > **entities_backup** = {}
- std::shared_ptr< std::mt19937 > **engine** = std::make_shared< std::mt19937 >()
- std::uniform_real_distribution **runifd**
- std::normal_distribution **rnormd**
- std::gamma_distribution **rgammad**
- std::lognormal_distribution **rlognormald**
- std::exponential_distribution **rexpd**
- std::binomial_distribution **rbinomd**
- std::function< void(std::vector< Agent< TSeq >> *, Model< TSeq > *, epiworld_double)> **rewire_fun**
- epiworld_double **rewire_prop** = 0.0
- std::map< std::string, epiworld_double > **parameters**
- epiworld_fast_uint **ndays** = 0
- Progress **pb**
- std::vector< UpdateFun< TSeq > > state_fun = {}

  Functions to update states.
- std::vector< std::string > states_labels = {}

  Labels of the states.
- std::function< void(Model< TSeq > *)> initial_states_fun
- epiworld_fast_uint **nstates** = 0u
- bool **verbose** = true
- int **current_date** = 0
- std::chrono::time_point< std::chrono::steady_clock > **time_start**
- std::chrono::time_point< std::chrono::steady_clock > **time_end**
- std::chrono::duration< epiworld_double, std::micro > **time_elapsed**
- epiworld_fast_uint **n_replicates** = 0u
- std::vector< GlobalEvent< TSeq > > **globalevents**
- Queue< TSeq > **queue**
- bool **use_queuing** = true
- std::vector< Event< TSeq > > events = {}

  Variables used to keep track of the events to be made regarding viruses.
- epiworld_fast_uint **nactions** = 0u

Auxiliary variables for AgentsSample<TSeq> iterators

These variables+objects are used by the AgentsSample<TSeq> class for building efficient iterators over agents. The idea is to reduce the memory allocation, so only during the first call of AgentsSample<TSeq>::AgentsSample(Model<TSeq>) these vectors are allocated.

- std::vector< Agent< TSeq > * > **sampled_population**
- size_t **sampled_population_n** = 0u
- std::vector< size_t > **population_left**
- size_t **population_left_n** = 0u

Agents features

Optionally, a model can include an external data source pointing to agents information. The data can then be access through the `Agent::operator()` method.

- double * **agents_data** = nullptr
- size_t **agents_data_ncols** = 0u

Friends

- class **Agent**< **TSeq** >
- class **AgentsSample**< **TSeq** >
- class **DataBase**< **TSeq** >
- class **Queue**< **TSeq** >

Tool Mixers

These functions combine the effects tools have to deliver a single effect. For example, wearing a mask, been vaccinated, and the immune system combine together to jointly reduce the susceptibility for a given virus.

- MixerFun< TSeq > **susceptibility_reduction_mixer** = susceptibility_reduction_mixer_default<TSeq>
- MixerFun< TSeq > **transmission_reduction_mixer** = transmission_reduction_mixer_default<TSeq>
- MixerFun< TSeq > **recovery_enhancer_mixer** = recovery_enhancer_mixer_default<TSeq>
- MixerFun< TSeq > **death_reduction_mixer** = death_reduction_mixer_default<TSeq>
- std::vector< epiworld_double > **array_double_tmp**
- std::vector< Virus< TSeq > * > **array_virus_tmp**
- std::vector< int > **array_int_tmp**
- virtual Model< TSeq > * clone_ptr ()

  Advanced usage: Makes a copy of data and returns it as undeleted pointer.
- **Model** ()
- **Model** (const Model< TSeq > &m)
- **Model** (Model< TSeq > &m)
- **Model** (Model< TSeq > &&m)
- Model< TSeq > & **operator=** (const Model< TSeq > &m)
- virtual ~**Model** ()

15.24.1 Detailed Description

template<typename TSeq>
class Model< TSeq >

Core class of epiworld.

The model class provides the wrapper that puts together `Agent`, `Virus`, and `Tools`.

Template Parameters

TSeq	Type of sequence. In principle, users can build models in which virus and human sequence is represented as numeric vectors (if needed.)

15.24.2 Member Function Documentation

15.24.2.1 add_globalevent()

```
template<typename TSeq >
void Model< TSeq >::add_globalevent (
            std::function< void(Model< TSeq > *)> fun,
            std::string name = "A global action",
            int date = -99 )  [inline]
```

Set a global action.

Parameters

fun	A function to be called on the prescribed date
name	Name of the action.
date	Integer indicating when the function is called (see details)

When date is less than zero, then the function is called at the end of every day. Otherwise, the function will be called only at the end of the indicated date.

15.24.2.2 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * Model< TSeq >::clone_ptr  [inline], [protected], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

15.24.2.3 events_add()

```
template<typename TSeq >
void Model< TSeq >::events_add (
            Agent< TSeq > * agent_,
```

```
            VirusPtr< TSeq > virus_,
            ToolPtr< TSeq > tool_,
            Entity< TSeq > * entity_,
            epiworld_fast_int new_state_,
            epiworld_fast_int queue_,
            EventFun< TSeq > call_,
            int idx_agent_,
            int idx_object_ )  [inline], [protected]
```

Construct a new Event object.

Parameters

*agent_*	Agent over which the action will be called
*virus_*	Virus pointer included in the action
*tool_*	Tool pointer included in the action
*entity_*	Entity pointer included in the action
*new_state_*	New state of the agent
*call_*	Function the action will call
*queue_*	Change in the queue
*idx_agent_*	Location of agent in object.
*idx_object_*	Location of object in agent.

15.24.2.4 events_run()

```
template<typename TSeq >
void Model< TSeq >::events_run  [inline]
```

Executes the stored action.

Parameters

*model_*	Model over which it will be executed.

15.24.2.5 load_agents_entities_ties()

```
template<typename TSeq >
void Model< TSeq >::load_agents_entities_ties (
            std::string fn,
            int skip )  [inline]
```

Associate agents-entities from a file.

The structure of the file should be two columns separated by space. The first column indexing between 0 and nagents-1, and the second column between 0 and nentities - 1.

Parameters

fn	Path to the file.
skip	How many rows to skip.

15.24.2.6 reset()

```
template<typename TSeq >
void Model< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

15.24.2.7 run_multiple()

```
template<typename TSeq >
void Model< TSeq >::run_multiple (
             epiworld_fast_uint ndays,
             epiworld_fast_uint nexperiments,
             int seed_ = -1,
             std::function< void(size_t, Model< TSeq > *)> fun = make_save_run<TSeq>(),
             bool reset = true,
             bool verbose = true,
             int nthreads = 1 )  [inline]
```

Parameters

ndays	Multiple runs of the simulation

15.24.2.8 set_agents_data()

```
template<typename TSeq >
void Model< TSeq >::set_agents_data (
```

```
            double * data_,
            size_t ncols_ )  [inline]
```

Set the agents data object.

The data should be an array with the data stored in a column major order, i.e., by column.

Parameters

*data_*	Pointer to the first element of an array of size `size() * ncols_`.
*ncols_*	Number of features included in the data.

15.24.2.9 set_name()

```
template<typename TSeq >
void Model< TSeq >::set_name (
            std::string name )  [inline]
```

Set the name object.

Parameters

name	

15.24.2.10 write_data()

```
template<typename TSeq >
void Model< TSeq >::write_data (
            std::string fn_virus_info,
            std::string fn_virus_hist,
            std::string fn_tool_info,
            std::string fn_tool_hist,
            std::string fn_total_hist,
            std::string fn_transmission,
            std::string fn_transition,
            std::string fn_reproductive_number,
            std::string fn_generation_time ) const  [inline]
```

Wrapper of `DataBase::write_data`

Parameters

fn_virus_info	Filename. Information about the virus.
fn_virus_hist	Filename. History of the virus.
fn_tool_info	Filename. Information about the tool.

Parameters

fn_tool_hist	Filename. History of the tool.
fn_total_hist	Filename. Aggregated history (state)
fn_transmission	Filename. Transmission history.
fn_transition	Filename. Markov transition history.
fn_reproductive_number	Filename. Case by case reproductive number

15.24.3 Member Data Documentation

15.24.3.1 initial_states_fun

```
template<typename TSeq >
std::function<void(Model<TSeq>*)> Model< TSeq >::initial_states_fun  [protected]
```

Initial value:

```
= [](Model<TSeq> * )
    -> void {}
```

Function to distribute states. Goes along with the function

15.24.3.2 rbinomd

```
template<typename TSeq >
std::binomial_distribution Model< TSeq >::rbinomd  [protected]
```

Initial value:

```
=
        std::binomial_distribution<>()
```

15.24.3.3 rexpd

```
template<typename TSeq >
std::exponential_distribution Model< TSeq >::rexpd  [protected]
```

Initial value:

```
=
        std::exponential_distribution<>()
```

15.24.3.4 rgammad

```
template<typename TSeq >
std::gamma_distribution Model< TSeq >::rgammad  [protected]
```

Initial value:

```
=
        std::gamma_distribution<>()
```

15.24.3.5 rlognormald

```
template<typename TSeq >
std::lognormal_distribution Model< TSeq >::rlognormald  [protected]
```

Initial value:

```
=
        std::lognormal_distribution<>()
```

15.24.3.6 rnormd

```
template<typename TSeq >
std::normal_distribution Model< TSeq >::rnormd  [protected]
```

Initial value:

```
=
        std::normal_distribution<>(0.0)
```

15.24.3.7 runifd

```
template<typename TSeq >
std::uniform_real_distribution Model< TSeq >::runifd  [protected]
```

Initial value:

```
=
        std::uniform_real_distribution<> (0.0, 1.0)
```

15.24.3.8 time_elapsed

```
template<typename TSeq >
std::chrono::duration<epiworld_double,std::micro> Model< TSeq >::time_elapsed  [protected]
```

Initial value:

```
=
        std::chrono::duration<epiworld_double,std::micro>::zero()
```

15.27.1 Detailed Description

template<typename TSeq = int>
class epiworld::epimodels::ModelSEIR< TSeq >

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	epiworld_double Initial prevalence the immune system
transmission_rate	epiworld_double Transmission rate of the virus
avg_incubation_days	epiworld_double Average incubation days of the virus.
recovery_rate	epiworld_double Recovery rate of the virus.

15.27.2 Member Function Documentation

15.27.2.1 initial_states()

```
template<typename TSeq >
ModelSEIR< TSeq > & ModelSEIR< TSeq >::initial_states (
             std::vector< double > proportions_,
             std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set up the initial states of the model.

Parameters

*proportions_*	Double vector with the following values: • 0: Proportion of non-infected agents who are removed. • 1: Proportion of exposed agents to be set as infected.

Reimplemented from epiworld::Model< int >.

15.27.3 Member Data Documentation

15.27.3.1 update_exposed_seir

```
template<typename TSeq = int>
epiworld::UpdateFun<TSeq> epiworld::epimodels::ModelSEIR< TSeq >::update_exposed_seir
```

Initial value:

```
= [](
        epiworld::Agent<TSeq> * p,
        epiworld::Model<TSeq> * m
    ) -> void {

        auto v = p->get_virus();

        if (m->runif() < 1.0/(v->get_incubation(m)))
            p->change_state(m, ModelSEIR<TSeq>::INFECTED);
        return;
    }
```

15.27.3.2 update_infected_seir

```
template<typename TSeq = int>
epiworld::UpdateFun<TSeq> epiworld::epimodels::ModelSEIR< TSeq >::update_infected_seir
```

Initial value:

```
= [](
        epiworld::Agent<TSeq> * p,
        epiworld::Model<TSeq> * m
    ) -> void {

        if (m->runif() < (m->par("Recovery rate")))
            p->rm_virus(m);
        return;
    }
```

The documentation for this class was generated from the following file:

15.28.1 Detailed Description

template<typename TSeq = int>
class ModelSEIR< TSeq >

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	epiworld_double Initial prevalence the immune system
transmission_rate	epiworld_double Transmission rate of the virus
avg_incubation_days	epiworld_double Average incubation days of the virus.
recovery_rate	epiworld_double Recovery rate of the virus.

15.28.2 Member Function Documentation

15.28.2.1 initial_states()

```
template<typename TSeq >
ModelSEIR< TSeq > & ModelSEIR< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set up the initial states of the model.

Parameters

*proportions_*	Double vector with the following values: • 0: Proportion of non-infected agents who are removed. • 1: Proportion of exposed agents to be set as infected.

Reimplemented from epiworld::Model< int >.

15.28.3 Member Data Documentation

15.28.3.1 update_exposed_seir

```
template<typename TSeq = int>
epiworld::UpdateFun<TSeq> ModelSEIR< TSeq >::update_exposed_seir
```

Initial value:

```
= [](
        epiworld::Agent<TSeq> * p,
        epiworld::Model<TSeq> * m
    ) -> void {

        auto v = p->get_virus();

        if (m->runif() < 1.0/(v->get_incubation(m)))
            p->change_state(m, ModelSEIR<TSeq>::INFECTED);
        return;
    }
```

15.28.3.2 update_infected_seir

```
template<typename TSeq = int>
epiworld::UpdateFun<TSeq> ModelSEIR< TSeq >::update_infected_seir
```

Initial value:

```
= [](
        epiworld::Agent<TSeq> * p,
        epiworld::Model<TSeq> * m
    ) -> void {

        if (m->runif() < (m->par("Recovery rate")))
            p->rm_virus(m);
        return;
    }
```

15.29.1 Constructor & Destructor Documentation

15.29.1.1 ModelSEIRCONN()

```
template<typename TSeq >
ModelSEIRCONN< TSeq >::ModelSEIRCONN (
            ModelSEIRCONN< TSeq > & model,
            const std::string & vname,
            epiworld_fast_uint n,
            epiworld_double prevalence,
            epiworld_double contact_rate,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate )  [inline]
```

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	Initial prevalence (proportion)
contact_rate	Average number of contacts (interactions) per step.
transmission_rate	Probability of transmission
recovery_rate	Probability of recovery

15.29.2 Member Function Documentation

15.29.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSEIRCONN< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.29.2.2 initial_states()

```
template<typename TSeq >
ModelSEIRCONN< TSeq > & ModelSEIRCONN< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with a single element: • The proportion of non-infected individuals who have recovered.

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.29.2.3 reset()

```
template<typename TSeq >
void ModelSEIRCONN< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

The documentation for this class was generated from the following file:

- epiworld.hpp

15.31.1 Detailed Description

template<typename TSeq = int>
class epiworld::epimodels::ModelSEIRD< TSeq >

Template for a Susceptible-Exposed-Infected-Removed-Deceased (SEIRD) model.

15.31.2 Constructor & Destructor Documentation

15.31.2.1 ModelSEIRD() [1/2]

```
template<typename TSeq >
ModelSEIRD< TSeq >::ModelSEIRD (
            ModelSEIRD< TSeq > & model,
            const std::string & vname,
            epiworld_double prevalence,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate,
            epiworld_double death_rate )  [inline]
```

Constructor for the SEIRD model.

Template Parameters

TSeq	Type of the sequence used in the model.

Parameters

model	Reference to the SEIRD model.
vname	Name of the model.

Parameters

prevalence	Prevalence of the disease.
transmission_rate	Transmission rate of the disease.
avg_incubation_days	Average incubation period of the disease.
recovery_rate	Recovery rate of the disease.
death_rate	Death rate of the disease.

15.31.2.2 ModelSEIRD() [2/2]

```
template<typename TSeq >
ModelSEIRD< TSeq >::ModelSEIRD (
             const std::string & vname,
             epiworld_double prevalence,
             epiworld_double transmission_rate,
             epiworld_double avg_incubation_days,
             epiworld_double recovery_rate,
             epiworld_double death_rate )  [inline]
```

Constructor for the SEIRD model.

Parameters

vname	Name of the model.
prevalence	Initial prevalence of the disease.
transmission_rate	Transmission rate of the disease.
avg_incubation_days	Average incubation period of the disease.
recovery_rate	Recovery rate of the disease.
death_rate	Death rate of the disease.

15.31.3 Member Data Documentation

15.31.3.1 update_exposed_seir

```
template<typename TSeq = int>
epiworld::UpdateFun<TSeq> epiworld::epimodels::ModelSEIRD< TSeq >::update_exposed_seir
```

Initial value:

```
= [](
    epiworld::Agent<TSeq> * p,
    epiworld::Model<TSeq> * m
  ) -> void {

    auto v = p->get_virus();

    if (m->runif() < 1.0/(v->get_incubation(m)))
      p->change_state(m, ModelSEIRD<TSeq>::INFECTED);
    return;
  }
```

The documentation for this class was generated from the following file:

15.33.1 Constructor & Destructor Documentation

15.33.1.1 ModelSEIRDCONN()

```
template<typename TSeq >
ModelSEIRDCONN< TSeq >::ModelSEIRDCONN (
            ModelSEIRDCONN< TSeq > & model,
            const std::string & vname,
            epiworld_fast_uint n,
            epiworld_double prevalence,
            epiworld_double contact_rate,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate,
            epiworld_double death_rate )  [inline]
```

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	Initial prevalence (proportion)
contact_rate	Average number of contacts (interactions) per step.
transmission_rate	Probability of transmission
recovery_rate	Probability of recovery
death_rate	Probability of death

15.33.2 Member Function Documentation

15.33.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSEIRDCONN< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.33.2.2 initial_states()

```
template<typename TSeq >
ModelSEIRDCONN< TSeq > & ModelSEIRDCONN< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set up the initial states of the model.

Parameters

*proportions_*	Double vector with the following values: • 0: Proportion of non-infected agents who are removed. • 1: Proportion of exposed agents to be set as infected.

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.33.2.3 reset()

```
template<typename TSeq >
void ModelSEIRDCONN< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

The documentation for this class was generated from the following file:

15.35.1 Constructor & Destructor Documentation

15.35.1.1 ModelSEIRMixing() [1/2]

```
template<typename TSeq >
ModelSEIRMixing< TSeq >::ModelSEIRMixing (
            ModelSEIRMixing< TSeq > & model,
            const std::string & vname,
            epiworld_fast_uint n,
            epiworld_double prevalence,
            epiworld_double contact_rate,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate,
            std::vector< double > contact_matrix )  [inline]
```

Constructs a ModelSEIRMixing object.

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

model	A reference to an existing ModelSEIRMixing object.
vname	The name of the ModelSEIRMixing object.
n	The number of entities in the model.
prevalence	The initial prevalence of the disease in the model.
contact_rate	The contact rate between entities in the model.
transmission_rate	The transmission rate of the disease in the model.
avg_incubation_days	The average incubation period of the disease in the model.
recovery_rate	The recovery rate of the disease in the model.
contact_matrix	The contact matrix between entities in the model. Specified in column-major order.
model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	Initial prevalence (proportion)
contact_rate	Average number of contacts (interactions) per step.
transmission_rate	Probability of transmission
recovery_rate	Probability of recovery

15.35.1.2 ModelSEIRMixing() [2/2]

```
template<typename TSeq >
ModelSEIRMixing< TSeq >::ModelSEIRMixing (
            const std::string & vname,
            epiworld_fast_uint n,
            epiworld_double prevalence,
            epiworld_double contact_rate,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate,
            std::vector< double > contact_matrix )  [inline]
```

Constructs a ModelSEIRMixing object.

Parameters

vname	The name of the ModelSEIRMixing object.
n	The number of entities in the model.
prevalence	The initial prevalence of the disease in the model.
contact_rate	The contact rate between entities in the model.
transmission_rate	The transmission rate of the disease in the model.
avg_incubation_days	The average incubation period of the disease in the model.
recovery_rate	The recovery rate of the disease in the model.
contact_matrix	The contact matrix between entities in the model.

15.35.2 Member Function Documentation

15.35.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSEIRMixing< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.35.2.2 initial_states()

```
template<typename TSeq >
ModelSEIRMixing< TSeq > & ModelSEIRMixing< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with a single element: • The proportion of non-infected individuals who have recovered.

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.35.2.3 reset()

```
template<typename TSeq >
void ModelSEIRMixing< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

The documentation for this class was generated from the following file:

- epiworld.hpp

```
template<typename TSeq >
ModelSEIRMixing< TSeq >::ModelSEIRMixing (
            const std::string & vname,
            epiworld_fast_uint n,
            epiworld_double prevalence,
            epiworld_double contact_rate,
            epiworld_double transmission_rate,
            epiworld_double avg_incubation_days,
            epiworld_double recovery_rate,
            std::vector< double > contact_matrix )  [inline]
```

Constructs a ModelSEIRMixing object.

Parameters

vname	The name of the ModelSEIRMixing object.
n	The number of entities in the model.
prevalence	The initial prevalence of the disease in the model.
contact_rate	The contact rate between entities in the model.
transmission_rate	The transmission rate of the disease in the model.
avg_incubation_days	The average incubation period of the disease in the model.
recovery_rate	The recovery rate of the disease in the model.
contact_matrix	The contact matrix between entities in the model.

15.36.2 Member Function Documentation

15.36.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSEIRMixing< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.36.2.2 initial_states()

```
template<typename TSeq >
ModelSEIRMixing< TSeq > & ModelSEIRMixing< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with a single element: • The proportion of non-infected individuals who have recovered.

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.36.2.3 reset()

```
template<typename TSeq >
void ModelSEIRMixing< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.41.1 Detailed Description

template<typename TSeq = int>
class epiworld::epimodels::ModelSIRD< TSeq >

Template for a Susceptible-Infected-Removed-Deceased (SIRD) model.

15.41.2 Constructor & Destructor Documentation

15.41.2.1 ModelSIRD()

```
template<typename TSeq >
ModelSIRD< TSeq >::ModelSIRD (
            ModelSIRD< TSeq > & model,
            const std::string & vname,
            epiworld_double prevalence,
            epiworld_double transmission_rate,
            epiworld_double recovery_rate,
            epiworld_double death_rate )  [inline]
```

Constructs a new SIRD model with the given parameters.

Parameters

model	The SIRD model to copy from.
vname	The name of the vertex associated with this model.
prevalence	The initial prevalence of the disease in the population.
transmission_rate	The rate at which the disease spreads from infected to susceptible individuals.
recovery_rate	The rate at which infected individuals recover and become immune.
death_rate	The rate at which infected individuals die.

15.41.3 Member Function Documentation

15.41.3.1 initial_states()

```
template<typename TSeq >
ModelSIRD< TSeq > & ModelSIRD< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with two elements: • The proportion of non-infected individuals who have recovered. • The proportion of non-infected individuals who have died.

Reimplemented from epiworld::Model< int >.

The documentation for this class was generated from the following file:

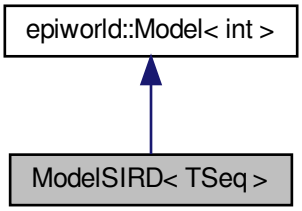
- epiworld.hpp

15.42 ModelSIRD< TSeq > Class Template Reference

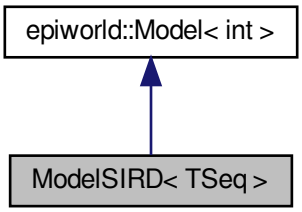
Template for a Susceptible-Infected-Removed-Deceased (SIRD) model.

```
#include <sird.hpp>
```

Inheritance diagram for ModelSIRD< TSeq >:



Collaboration diagram for ModelSIRD< TSeq >:



Public Member Functions

- ModelSIRD< TSeq > & initial_states (std::vector< double > proportions_, std::vector< int > queue_={})
  Set the initial states of the model.

- ModelSIRD (ModelSIRD< TSeq > &model, const std::string &vname, epiworld_double prevalence, epiworld_double transmission_rate, epiworld_double recovery_rate, epiworld_double death_rate)
  Constructs a new SIRD model with the given parameters.
- **ModelSIRD** (const std::string &vname, epiworld_double prevalence, epiworld_double transmission_rate, epiworld_double recovery_rate, epiworld_double death_rate)

Additional Inherited Members

15.42.1 Detailed Description

template<typename TSeq = int>
class ModelSIRD< TSeq >

Template for a Susceptible-Infected-Removed-Deceased (SIRD) model.

15.42.2 Constructor & Destructor Documentation

15.42.2.1 ModelSIRD()

```
template<typename TSeq >
ModelSIRD< TSeq >::ModelSIRD (
            ModelSIRD< TSeq > & model,
            const std::string & vname,
            epiworld_double prevalence,
            epiworld_double transmission_rate,
            epiworld_double recovery_rate,
            epiworld_double death_rate )  [inline]
```

Constructs a new SIRD model with the given parameters.

Parameters

model	The SIRD model to copy from.
vname	The name of the vertex associated with this model.
prevalence	The initial prevalence of the disease in the population.
transmission_rate	The rate at which the disease spreads from infected to susceptible individuals.
recovery_rate	The rate at which infected individuals recover and become immune.
death_rate	The rate at which infected individuals die.

15.42.3 Member Function Documentation

15.42.3.1 initial_states()

```
template<typename TSeq >
ModelSIRD< TSeq > & ModelSIRD< TSeq >::initial_states (
            std::vector< double > proportions_,
            std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with two elements: • The proportion of non-infected individuals who have recovered. • The proportion of non-infected individuals who have died.

Reimplemented from epiworld::Model< int >.

            epiworld_double recovery_rate,
            epiworld_double death_rate ) [inline]
```

Template for a Susceptible-Infected-Removed (SIR) model.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	Initial prevalence (proportion)
contact_rate	Average number of contacts (interactions) per step.
transmission_rate	Probability of transmission
recovery_rate	Probability of recovery
death_rate	Probability of death

15.43.2 Member Function Documentation

15.43.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSIRDCONN< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.43.2.2 reset()

```
template<typename TSeq >
void ModelSIRDCONN< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.45.1 Detailed Description

template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelSIRLogit< TSeq >

Template for a Susceptible-Infected-Removed (SIR) model.

In this model, infection and recoveru probabilities are computed using a logit model. Particularly, the probability of infection is computed as:

$$\frac{1}{1 + \exp\left(-\left(\beta_0 E_i + \sum_{i=1}^{n} \beta_i x_i\right)\right)}$$

where β_0 is the exposure coefficient and E_i is the exposure number, β_i are the coefficients for the features x_i of the agents, and n is the number of features. The probability of recovery is computed as:

$$\frac{1}{1 + \exp\left(-\left(\sum_{i=1}^{n} \beta_i x_i\right)\right)}$$

where β_i are the coefficients for the features x_i of the agents, and n is the number of features.

Parameters

TSeq	Type of the sequence (e.g. std::vector, std::deque)

15.45.2 Constructor & Destructor Documentation

15.45.2.1 ModelSIRLogit()

```
template<typename TSeq >
ModelSIRLogit< TSeq >::ModelSIRLogit (
            ModelSIRLogit< TSeq > & model,
            const std::string & vname,
            double * data,
            size_t ncols,
            std::vector< double > coefs_infect,
            std::vector< double > coefs_recover,
            std::vector< size_t > coef_infect_cols,
            std::vector< size_t > coef_recover_cols,
            epiworld_double transmission_rate,
            epiworld_double recovery_rate,
            epiworld_double prevalence )  [inline]
```

Template for a Susceptible-Infected-Removed (SIR) model.

Parameters

vname	Name of the virus.
coefs_infect	Double ptr. Infection coefficients.
coefs_recover	Double ptr. Recovery coefficients.
ncoef_infect	Unsigned int. Number of infection coefficients.
ncoef_recover	Unsigned int. Number of recovery coefficients.
coef_infect_cols	Vector<unsigned int>. Ids of infection vars.
coef_recover_cols	Vector<unsigned int>. Ids of recover vars.

Parameters

model	A Model<TSeq> object where to set up the SIR.
vname	std::string Name of the virus
prevalence	Initial prevalence (proportion)
contact_rate	Average number of contacts (interactions) per step.
prob_transmission	Probability of transmission
prob_recovery	Probability of recovery

15.45.3 Member Function Documentation

15.45.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSIRLogit< TSeq >::clone_ptr  [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.45.3.2 reset()

```
template<typename TSeq >
void ModelSIRLogit< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

Parameters

copy	

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.48.2.2 initial_states()

```
template<typename TSeq >
ModelSIRMixing< TSeq > & ModelSIRMixing< TSeq >::initial_states (
```

```
std::vector< double > proportions_,
std::vector< int > queue_ = {} )  [inline], [virtual]
```

Set the initial states of the model.

Parameters

*proportions_*	Double vector with a single element: • The proportion of non-infected individuals who have recovered.

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

15.48.2.3 reset()

```
template<typename TSeq >
void ModelSIRMixing< TSeq >::reset  [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from epiworld::Model< EPI_DEFAULT_TSEQ >.

The documentation for this class was generated from the following file:

- include/epiworld/models/sirmixing.hpp

15.49 epiworld::epimodels::ModelSIS< TSeq > Class Template Reference

Template for a Susceptible-Infected-Susceptible (SIS) model.

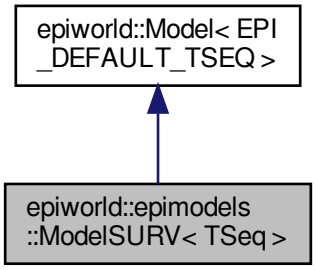
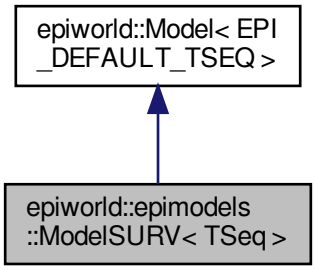
15.53 epiworld::epimodels::ModelSURV< TSeq > Class Template Reference

Inheritance diagram for epiworld::epimodels::ModelSURV< TSeq >:



Collaboration diagram for epiworld::epimodels::ModelSURV< TSeq >:



Public Member Functions

Construct a new ModelSURV object

The ModelSURV class simulates a survaillence model where agents can be isolated, even if asyptomatic.

Parameters

vname	*String. Name of the virus*
prevalence	*Integer. Number of initial cases of the virus.*
efficacy_vax	*Double. Efficacy of the vaccine (1 - P(acquire the disease)).*
latent_period	*Double. Shape parameter of a* `Gamma(latent_period, 1)` *distribution. This coincides with the expected number of latent days.*
infect_period	*Double. Shape parameter of a* `Gamma(infected_period, 1)` *distribution. This coincides with the expected number of infectious days.*
prob_symptoms	*Double. Probability of generating symptoms.*
prop_vaccinated	*Double. Probability of vaccination. Coincides with the initial prevalence of vaccinated individuals.*
prop_vax_redux_transm	*Double. Factor by which the vaccine reduces transmissibility.*
prop_vax_redux_infect	*Double. Factor by which the vaccine reduces the chances of becoming infected.*
surveillance_prob	*Double. Probability of testing an agent.*
prob_transmission	*Double. Raw transmission probability.*
prob_death	*Double. Raw probability of death for symptomatic individuals.*
prob_noreinfect	*Double. Probability of no re-infection.*

This model features the following states:

- *Susceptible*
- *Latent*
- *Symptomatic*
- *Symptomatic isolated*
- *Asymptomatic*
- *Asymptomatic isolated*
- *Recovered*

- *Removed*

Returns

An object of class `epiworld_surv`

- **ModelSURV** ()
- **ModelSURV** (ModelSURV< TSeq > &model, const std::string &vname, epiworld_fast_uint prevalence=50, epiworld_double efficacy_vax=0.9, epiworld_double latent_period=3u, epiworld_double infect_period=6u, epiworld_double prob_symptoms=0.6, epiworld_double prop_vaccinated=0.25, epiworld_double prop_vax_redux_transm=0.5, epiworld_double prop_vax_redux_infect=0.5, epiworld_double surveillance_prob=0.001, epiworld_double prob_transmission=1.0, epiworld_double prob_death=0.001, epiworld_double prob_noreinfect=0.9)

- std::vector< int > & **get_dates** ()
- std::vector< epiworld_double > & **get_data** ()

- void **get_all** (std::vector< std::string > *names=nullptr, std::vector< int > *date=nullptr, std::vector< epiworld_double > *data=nullptr)
- epiworld_fast_uint **nrow** () const
- epiworld_fast_uint **ncol** () const
- void **write** (std::string fn)
- void **print** () const

Append data

Parameters

x	*A vector of length* `ncol()` *(if vector), otherwise a* `epiworld_double`.
j	*Index of the data point, from 0 to* `ncol() - 1`.

- void **add** (std::vector< epiworld_double > x)
- void **add** (epiworld_fast_uint j, epiworld_double x)

Access data

Parameters

i	*Row (0 through ndays - 1.)*
j	*Column (0 through* `ncols()`*).*

Returns

epiworld_double&

- epiworld_double & **operator()** (epiworld_fast_uint i, epiworld_fast_uint j)
- epiworld_double & **operator()** (epiworld_fast_uint i, std::string name)

Friends

- class **Model< TSeq >**
- class **DataBase< TSeq >**

15.71.1 Detailed Description

template<typename TSeq>
class epiworld::UserData< TSeq >

Personalized data by the user.

Template Parameters

TSeq	

15.71.2 Constructor & Destructor Documentation

15.71.2.1 UserData()

```
template<typename TSeq >
UserData< TSeq >::UserData (
            std::vector< std::string > names )  [inline]
```

Construct a new User Data object.

Parameters

names	A vector of names. The length of the vector sets the number of columns to record.

The documentation for this class was generated from the following file:

- epiworld.hpp

15.72 UserData< TSeq > Class Template Reference

Personalized data by the user.

`#include <userdata-bones.hpp>`

Public Member Functions

- **UserData** (Model< TSeq > &m)
- **UserData** (Model< TSeq > *m)
- UserData (std::vector< std::string > names)

  Construct a new User Data object.
- std::vector< std::string > & **get_names** ()
- std::vector< int > & **get_dates** ()
- std::vector< epiworld_double > & **get_data** ()
- void **get_all** (std::vector< std::string > *names=nullptr, std::vector< int > *date=nullptr, std::vector< epiworld_double > *data=nullptr)
- epiworld_fast_uint **nrow** () const
- epiworld_fast_uint **ncol** () const
- void **write** (std::string fn)
- void **print** () const

Append data

Parameters

x	*A vector of length* `ncol()` *(if vector), otherwise a* `epiworld_double`.
j	*Index of the data point, from 0 to* `ncol() - 1`.

- void **add** (std::vector< epiworld_double > x)
- void **add** (epiworld_fast_uint j, epiworld_double x)

Access data

Parameters

i	*Row (0 through ndays - 1.)*
j	*Column (0 through `ncols()`).*

Returns

epiworld_double&

- epiworld_double & **operator()** (epiworld_fast_uint i, epiworld_fast_uint j)
- epiworld_double & **operator()** (epiworld_fast_uint i, std::string name)

Friends

- class **Model**< **TSeq** >

15.72.1 Detailed Description

template<**typename TSeq**>
class UserData< **TSeq** >

Personalized data by the user.

Template Parameters

TSeq	

15.72.2 Constructor & Destructor Documentation

15.72.2.1 UserData()

```
template<typename TSeq >
UserData< TSeq >::UserData (
            std::vector< std::string > names )  [inline]
```

Construct a new User Data object.

Parameters

names	A vector of names. The length of the vector sets the number of columns to record.

The documentation for this class was generated from the following files:

- include/epiworld/database-bones.hpp
- include/epiworld/userdata-bones.hpp
- include/epiworld/userdata-meat.hpp

15.73 epiworld::vecHasher< T > Struct Template Reference

Vector hasher.

`#include <epiworld.hpp>`

Public Member Functions

- std::size_t **operator()** (std::vector< T > const &dat) const noexcept

15.73.1 Detailed Description

template<typename T>
struct epiworld::vecHasher< T >

Vector hasher.

Template Parameters

T	

The documentation for this struct was generated from the following file:

- epiworld.hpp

15.74 vecHasher< T > Struct Template Reference

Vector hasher.

`#include <misc.hpp>`

Public Member Functions

- std::size_t **operator()** (std::vector< T > const &dat) const noexcept

15.74.1 Detailed Description

template<typename T>
struct vecHasher< T >

Vector hasher.

Template Parameters

T	

The documentation for this struct was generated from the following file:

- include/epiworld/misc.hpp

15.75 epiworld::Virus< TSeq > Class Template Reference

Virus.

```
#include <epiworld.hpp>
```

Public Member Functions

- **Virus** (std::string name="unknown virus")
- **Virus** (std::string name, epiworld_double prevalence, bool as_proportion)
- void **mutate** (Model< TSeq > *model)
- void **set_mutation** (MutFun< TSeq > fun)
- std::shared_ptr< TSeq > **get_sequence** ()

- std::vector< epiworld_double > & **get_data** ()
- bool **operator==** (const Virus< TSeq > &other) const
- bool **operator!=** (const Virus< TSeq > &other) const
- void **print** () const

Get and set the tool functions

Parameters

v	*The virus over which to operate*
fun	*the function to be used*

Returns

epiworld_double

- epiworld_double **get_prob_infecting** (Model< TSeq > *model)
- epiworld_double **get_prob_recovery** (Model< TSeq > *model)
- epiworld_double **get_prob_death** (Model< TSeq > *model)
- epiworld_double **get_incubation** (Model< TSeq > *model)

Get and set the state and queue

After applied, viruses can change the state and affect the queue of agents. These function sets the default values, which are retrieved when adding or removing a virus does not specify a change in state or in queue.

Parameters

init	*After the virus/tool is added to the agent.*
end	*After the virus/tool is removed.*
removed	*After the agent (Agent) is removed.*

- void **set_state** (epiworld_fast_int init, epiworld_fast_int end, epiworld_fast_int removed=-99)
- void **set_queue** (epiworld_fast_int init, epiworld_fast_int end, epiworld_fast_int removed=-99)
- void **get_state** (epiworld_fast_int *init, epiworld_fast_int *end, epiworld_fast_int *removed=nullptr)
- void **get_queue** (epiworld_fast_int *init, epiworld_fast_int *end, epiworld_fast_int *removed=nullptr)

- void distribute (Model< TSeq > *model)

  Get information about the prevalence of the virus.
- void **set_distribution** (VirusToAgentFun< TSeq > fun)

Friends

- class **Agent**< **TSeq** >
- class **Model**< **TSeq** >
- class **DataBase**< **TSeq** >

- void **default_rm_virus** (Event< TSeq > &a, Model< TSeq > *m)

15.75.1 Detailed Description

template<typename TSeq>
class epiworld::Virus< TSeq >

Virus.

Template Parameters

TSeq	

Raw transmisibility of a virus should be a function of its genetic sequence. Nonetheless, transmisibility can be reduced as a result of having one or more tools to fight the virus. Because of this, transmisibility should be a function of the agent.

The documentation for this class was generated from the following file:

- epiworld.hpp

15.76 Virus< TSeq > Class Template Reference

Virus.

`#include <virus-bones.hpp>`

Public Member Functions

- **Virus** (std::string name="unknown virus")
- **Virus** (std::string name, epiworld_double prevalence, bool as_proportion)
- void **mutate** (Model< TSeq > *model)

Chapter 16

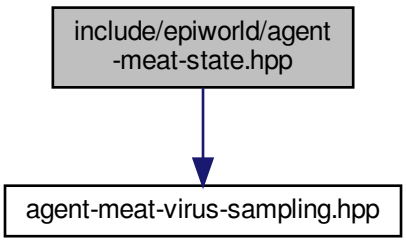
File Documentation

16.1 include/epiworld/agent-meat-state.hpp File Reference

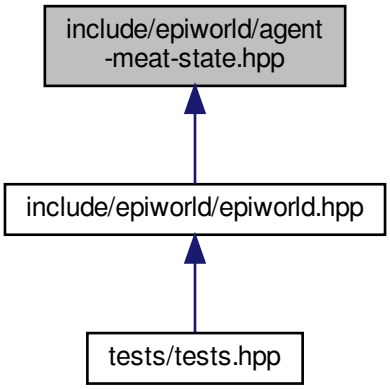
Sampling functions are getting big, so we keep them in a separate file.

```
#include "agent-meat-virus-sampling.hpp"
```

Include dependency graph for agent-meat-state.hpp:



This graph shows which files directly or indirectly include this file:



Functions

- template<typename TSeq = EPI_DEFAULT_TSEQ>
  void **default_update_susceptible** (Agent< TSeq > *p, Model< TSeq > *m)
- template<typename TSeq = EPI_DEFAULT_TSEQ>
  void **default_update_exposed** (Agent< TSeq > *p, Model< TSeq > *m)

16.1.1 Detailed Description

Sampling functions are getting big, so we keep them in a separate file.
