Contributor Code of Conduct

As contributors and maintainers of this project, we pledge to respect all people who contribute through reporting issues, posting feature requests, updating documentation, submitting pull requests or patches, and other activities.

We are committed to making participation in this project a harassment-free experience for everyone, regardless of level of experience, gender, gender identity and expression, sexual orientation, disability, personal appearance, body size, race, ethnicity, age, or religion.

Examples of unacceptable behavior by participants include the use of sexual language or imagery, derogatory comments or personal attacks, trolling, public or private harassment, insults, or other unprofessional conduct.

Project maintainers have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct. Project maintainers who do not follow the Code of Conduct may be removed from the project team.

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported by opening an issue or contacting one or more of the project maintainers.

This Code of Conduct is adapted from the Contributor Covenant (<http://contributor-covenant.org>), version 1.0.0, available at <http://contributor-covenant.org/version/1/0/0/>

Chapter 3

ModelMeaslesMixing

A comprehensive epidemiological model that combines measles-specific disease progression with population mixing and quarantine measures.

3.1 Overview

`ModelMeaslesMixing` implements a measles transmission model that extends the SEIR framework with:

- **Measles-specific disease progression:** Susceptible → Exposed → Prodromal → Rash → Recovered
- **Population mixing:** Uses contact matrices to model heterogeneous mixing between population groups
- **Infectious period:** Agents are infectious during the Prodromal state
- **Detection and isolation:** Detection occurs during the Rash state when symptoms become visible
- **Contact tracing:** Comprehensive contact tracing with configurable success rates
- **Quarantine measures:** Multiple quarantine states for exposed contacts
- **Vaccination:** Vaccine distribution with configurable efficacy and recovery enhancement

3.2 Disease States

The model includes 13 distinct states:

1. **Susceptible** - Can become infected
2. **Exposed** - Infected but not yet infectious (incubation period)
3. **Prodromal** - Infectious individuals (replaces "Infected" in standard SEIR)
4. **Rash** - Non-infectious with visible symptoms (detection occurs here)
5. **Isolated** - Detected individuals in self-isolation
6. **Isolated Recovered** - Recovered individuals still in isolation

7. **Detected Hospitalized** - Hospitalized individuals who were contact-traced
8. **Quarantined Exposed** - Exposed individuals in quarantine
9. **Quarantined Susceptible** - Susceptible individuals in quarantine
10. **Quarantined Prodromal** - Prodromal individuals in quarantine
11. **Quarantined Recovered** - Recovered individuals in quarantine
12. **Hospitalized** - Individuals requiring hospital care
13. **Recovered** - Immune individuals

3.3 Key Features

3.3.1 Disease Progression

- **Incubation Period:** Time from exposure to becoming infectious
- **Prodromal Period:** Duration of infectiousness before rash appears
- **Rash Period:** Duration of visible symptoms (detection window)
- **Detection:** Probabilistic detection during rash period
- **Hospitalization:** Some individuals require hospitalization

3.3.2 Population Mixing

- **Contact Matrices:** Define mixing patterns between population groups
- **Heterogeneous Mixing:** Different contact rates between groups
- **Scalable:** Supports multiple population entities

3.3.3 Public Health Measures

- **Contact Tracing:** Trace contacts of detected individuals
- **Quarantine:** Quarantine exposed contacts with configurable compliance
- **Isolation:** Isolate detected cases with configurable willingness
- **Vaccination:** Reduce susceptibility and enhance recovery

3.4 Parameters

3.4.1 Disease Parameters

- `contact_rate`: Average number of contacts per day
- `transmission_rate`: Probability of transmission per contact
- `incubation_period`: Average incubation period (days)
- `prodromal_period`: Average prodromal period (days)
- `rash_period`: Average rash period (days)
- `hospitalization_rate`: Probability of hospitalization
- `hospitalization_period`: Average hospitalization duration (days)

3.4.2 Detection and Isolation

- `days_undetected`: Average time until detection during rash period
- `isolation_period`: Duration of isolation for detected cases
- `isolation_willingness`: Proportion willing to self-isolate

3.4.3 Contact Tracing and Quarantine

- `contact_tracing_success_rate`: Probability of successfully tracing a contact
- `contact_tracing_days_prior`: Number of days to trace back
- `quarantine_period`: Duration of quarantine for contacts
- `quarantine_willingness`: Proportion willing to quarantine

3.4.4 Vaccination

- `prop_vaccinated`: Proportion of population vaccinated
- `vax_efficacy`: Vaccine efficacy (reduction in susceptibility)
- `vax_reduction_recovery_rate`: Recovery enhancement from vaccination

3.5 Usage Example

```
#include "epiworld.hpp"
// Contact matrix for single homogeneous population
std::vector<double> contact_matrix = {1.0};
// Create the model
epimodels::ModelMeaslesMixing<> model(
    "Measles",           // Virus name
    1000,                // Population size
    0.005,               // Initial prevalence
    4.0,                 // Contact rate
    0.9,                 // Transmission rate
    0.95,                // Vaccine efficacy
    0.5,                 // Vaccine recovery enhancement
    10.0,                // Incubation period
    4.0,                 // Prodromal period
    5.0,                 // Rash period
    contact_matrix,      // Contact matrix
    0.1,                 // Hospitalization rate
    7.0,                 // Hospitalization period
    2.0,                 // Days undetected
    14,                  // Quarantine period
    0.8,                 // Quarantine willingness
    0.9,                 // Isolation willingness
    10,                  // Isolation period
    0.7,                 // Vaccination rate
    0.8,                 // Contact tracing success rate
    3u,                  // Contact tracing days prior
);
// Add population entity
model.add_entity(Entity<>("Population", dist_factory<>(0, 1000)));
// Run simulation
model.run(60, 123);
model.print();
```

3.6 Differences from Other Models

3.6.1 vs. ModelMeaslesSchool

- **Population Mixing:** Adds contact matrices for heterogeneous mixing
- **Contact Tracing:** Enhanced contact tracing with configurable success rates
- **Scalability:** Supports multiple population entities

3.6.2 vs. ModelSEIRMixingQuarantine

- **Disease-Specific States:** Uses Prodromal/Rash instead of generic Infected
- **Detection Timing:** Detection occurs during Rash state, not Infected state
- **Infectious Period:** Only Prodromal individuals are infectious
- **Vaccination:** Includes vaccine distribution and efficacy

3.7 Testing

The model includes comprehensive tests that verify:

- Correct transition probabilities between states
- Proper detection and quarantine mechanics
- Population mixing functionality
- Reproductive number calculations
- All quarantine states function correctly

See `tests/19-measles-mixing.cpp` for test examples.

Chapter 4

ModelMeaslesMixingRiskQuarantine

A comprehensive epidemiological model that extends measles transmission modeling with risk-stratified quarantine strategies.

4.1 Overview

`ModelMeaslesMixingRiskQuarantine` implements a measles transmission model based on the `ModelMeaslesMixing` framework, with enhanced quarantine policies that vary based on exposure risk levels. This allows for targeted public health interventions that can optimize resource allocation and epidemic control.

4.1.1 Key Features

- **Measles-specific disease progression:** Susceptible → Exposed → Prodromal → Rash → Recovered
- **Population mixing:** Uses contact matrices to model heterogeneous mixing between population groups
- **Risk-stratified quarantine:** Three-tier system (high/medium/low risk) with customizable durations
- **Enhanced detection:** Detection rate parameter that activates during quarantine periods
- **Contact tracing:** Comprehensive contact tracing with configurable success rates
- **Entity-based risk assessment:** Risk levels determined by shared entity membership
- **Vaccination effects:** Vaccine distribution with configurable efficacy

4.2 Disease States

The model includes 13 distinct states:

1. **Susceptible** - Can become infected
2. **Exposed** - Infected but not yet infectious (incubation period)

3. **Prodromal** - Infectious individuals (replaces "Infected" in standard SEIR)
4. **Rash** - Non-infectious with visible symptoms (detection occurs here)
5. **Isolated** - Detected individuals in self-isolation
6. **Isolated Recovered** - Recovered individuals still in isolation
7. **Detected Hospitalized** - Hospitalized individuals who were contact-traced
8. **Quarantined Exposed** - Exposed individuals in quarantine
9. **Quarantined Susceptible** - Susceptible individuals in quarantine
10. **Quarantined Prodromal** - Prodromal individuals in quarantine
11. **Quarantined Recovered** - Recovered individuals in quarantine
12. **Hospitalized** - Individuals requiring hospital care
13. **Recovered** - Individuals who have recovered and gained immunity

4.3 Risk Classification System

When the quarantine process is triggered by a detected case, contacts are classified into three risk levels:

4.3.1 High Risk

- **Definition:** Unvaccinated agents who share entity membership with the case that triggered quarantine
- **Rationale:** Highest transmission risk due to close, prolonged contact within same household/workplace/school
- **Default quarantine duration:** 21 days (configurable)

4.3.2 Medium Risk

- **Definition:** Unvaccinated agents who had contact with infected individuals but don't share entity membership
- **Rationale:** Moderate transmission risk from community contact
- **Default quarantine duration:** 14 days (configurable)

4.3.3 Low Risk

- **Definition:** All other unvaccinated agents
- **Rationale:** Lowest transmission risk, potential for community spread
- **Default quarantine duration:** 7 days (configurable)

Note: Vaccinated agents (those with tools) are not subject to quarantine regardless of contact patterns.

4.4 Enhanced Detection

The model includes an enhanced detection mechanism that operates during active quarantine periods:

- **Detection rate quarantine:** Additional parameter specifying detection probability for prodromal individuals during active quarantine
- **Mechanism:** When any quarantine process is active, prodromal individuals have an additional chance of being detected and moved to quarantined prodromal state
- **Purpose:** Models increased surveillance and testing during outbreak response

4.5 Parameters

4.5.1 Disease Parameters

- **Contact rate:** Average number of contacts per step
- **Transmission rate:** Probability of transmission per contact
- **Incubation period:** Average time from exposure to becoming infectious
- **Prodromal period:** Average duration of infectious period
- **Rash period:** Average duration of rash symptoms
- **Hospitalization rate:** Probability of requiring hospitalization
- **Hospitalization period:** Average duration of hospital stay

4.5.2 Detection and Isolation

- **Days undetected:** Average time before rash cases are detected
- **Isolation period:** Duration of isolation for detected cases
- **Isolation willingness:** Proportion willing to self-isolate when detected
- **Detection rate quarantine:** Detection rate during active quarantine periods

4.5.3 Risk-based Quarantine

- **Quarantine period high:** Duration for high-risk contacts (days)
- **Quarantine period medium:** Duration for medium-risk contacts (days)
- **Quarantine period low:** Duration for low-risk contacts (days)
- **Quarantine willingness:** Proportion willing to comply with quarantine

4.5.4 Contact Tracing

- **Contact tracing success rate:** Probability of successfully identifying contacts
- **Contact tracing days prior:** Number of days prior to detection for tracing

4.5.5 Vaccination

- **Vaccination rate:** Proportion of agents initially vaccinated
- **Vax efficacy:** Vaccine effectiveness in preventing infection
- **Vax improved recovery:** Enhanced recovery rate for vaccinated individuals

4.6 Usage Example

```
#include <epiworld/epiworld.hpp>
// Contact matrix for 3 population groups
std::vector<double> contact_matrix = {
    0.8, 0.1, 0.1, // Group 1 mixing
    0.1, 0.8, 0.1, // Group 2 mixing
    0.1, 0.1, 0.8 // Group 3 mixing
};
// Create model with risk-based quarantine
epimodels::ModelMeaslesMixingRiskQuarantine<> model(
    1000, // Population size
    0.01, // Initial prevalence
    2.0, // Contact rate
    0.2, // Transmission rate
    0.9, // Vaccination efficacy
    0.3, // Vaccine recovery enhancement
    7.0, // Incubation period
    4.0, // Prodromal period
    5.0, // Rash period
    contact_matrix, // Contact matrix
    0.2, // Hospitalization rate
    7.0, // Hospitalization duration
    3.0, // Days undetected
    21, // Quarantine period high risk
    14, // Quarantine period medium risk
    7, // Quarantine period low risk
    0.8, // Quarantine willingness
    0.8, // Isolation willingness
    4, // Isolation period
    0.1, // Proportion vaccinated
    0.15, // Detection rate during quarantine
    1.0, // Contact tracing success rate
    4u // Contact tracing days prior
);
// Add population entities
model.add_entity(Entity<>("Households", dist_factory<>(0, 400)));
model.add_entity(Entity<>("Schools", dist_factory<>(400, 700)));
model.add_entity(Entity<>("Workplaces", dist_factory<>(700, 1000)));
// Set initial conditions
model.initial_states({1.0, 0.0}); // All infected start as exposed
// Run simulation
model.run(60, 123);
model.print();
```

4.7 Differences from Other Models

4.7.1 vs. ModelMeaslesMixing

- **Risk-stratified quarantine:** Three different quarantine durations based on exposure risk
- **Enhanced detection:** Additional detection during active quarantine periods
- **Entity-based risk assessment:** Risk levels determined by shared entity membership
- **Flexible quarantine policies:** Each risk level can have different quarantine duration or be disabled

4.7.2 vs. ModelMeaslesSchool

- **Population mixing:** Supports contact matrices for heterogeneous mixing
- **Risk stratification:** Multiple quarantine strategies rather than uniform approach
- **Enhanced contact tracing:** Risk-based contact management
- **Scalability:** Supports multiple population entities with different mixing patterns

4.8 Testing

The model includes comprehensive tests that verify:

- Correct transition probabilities between all 13 states
- Proper risk level assignment (high/medium/low)
- Enhanced detection mechanism during quarantine periods
- Different quarantine durations for different risk levels
- Comparison of uniform vs. risk-stratified quarantine strategies
- Population mixing functionality with multiple entities

See `tests/20a-measles-mixing-risk-quarantine.cpp` for test examples.

4.9 Applications

This model is particularly useful for:

1. **Outbreak response planning:** Comparing different quarantine strategies
2. **Resource optimization:** Allocating quarantine resources based on transmission risk
3. **Policy evaluation:** Assessing effectiveness of risk-stratified interventions
4. **Contact tracing optimization:** Understanding impact of enhanced detection during outbreaks
5. **Vaccination strategy:** Evaluating how vaccination coverage affects quarantine effectiveness

4.10 Implementation Notes

- Risk levels are assigned dynamically when quarantine is triggered
- Vaccinated agents are excluded from quarantine regardless of contact patterns
- Enhanced detection only operates when at least one quarantine process is active
- Quarantine durations can be set to -1 to disable quarantine for specific risk levels
- The model maintains backward compatibility with uniform quarantine by setting all periods equal

Chapter 6

Mixing probabilities in connected model

George G. Vega Yon, Ph.D. 2024-04-25

6.1 Case 1: No grouping

We will look into the probability of drawing infected individuals to simplify the algorithm. There are I infected individuals at any time in the simulation; thus, instead of drawing from $\text{Bern}(c/N, N)$, we will be drawing from $\text{Bern}(c/N, I)$. The next step is to check which infected individuals should be drawn. Let's compare the distributions using the hypergeometric as an example:

```
set.seed(132)
nsims <- 1e4
N <- 400
rate <- 5
p <- rate/N
I <- 10
sim_complex <- parallel::mclapply(1:nsims, \(i) {
  nsamples <- rbinom(N, N, p)
  sum(rbinom(N, size = nsamples, prob = I/N) > 0)
}, mc.cores = 4L) |> unlist()
sim_simple <- parallel::mclapply(1:nsims, \(i) {
  sum(rbinom(N, I, p) > 0)
}, mc.cores = 4L) |> unlist()
op <- par(mfrow = c(1,2))
MASS::truehist(sim_complex)
MASS::truehist(sim_simple)
par(op)
quantile(sim_complex)
```

0%	25%	50%	75%	100%
27	43	47	51	71

```
quantile(sim_simple)
```

0%	25%	50%	75%	100%
23	43	47	51	71

```
plotter(sim_complex, sim_simple)
```

These two approaches are equivalent, but the second one is more efficient from the computational perspective.

6.2 Case 2: Grouping

This explores the case when we have mixing across groups. The question is if we can replicate the effect at the group level.

```
set.seed(123133)
ngroups <- 3
mixing <- matrix(
  c(0.1, 0.2, 0.3, 0.2, 0.1, 0.2, 0.3, 0.2, 0.1),
  nrow = ngroups,
  ncol = ngroups
)
mixing <- mixing/rowSums(mixing)
mixing

      [,1]      [,2]      [,3]
[1,] 0.1666667 0.3333333 0.5000000
[2,] 0.4000000 0.2000000 0.4000000
[3,] 0.5000000 0.3333333 0.1666667

N <- 500
sizes <- c(100, 150, 250)
rate <- 5
p <- rate/N
I <- c(10, 30, 20)
ids <- rep.int(1:ngroups, times = sizes)
nsims <- 1e4
sim_complex <- parallel::mclapply(1:nsims, \(i) {
  # Sampling group first
  sapply(1:ngroups, \(g) {
    # How many each individual will sample from the groups
    ans <- rbinom(
      n = N, size = sizes[g], prob = mixing[ids,][g] * p
    ) |> sum()
    # Sampling with replacement
    rbinom(ans, size = 1, prob = I[g]/sizes[g]) |> sum()
  }) |> sum()
}, mc.cores = 4L) |> unlist()
```

Using the alternative method in which we directly weight the probabilities:

```
sim_simple <- parallel::mclapply(1:nsims, \(i) {
  # Sampling group first
  sapply(1:ngroups, \(g) {
    rbinom(
      n = N, size = I[g], prob = mixing[cbind(ids,g)] * p
    ) |> sum()
  }) |> sum()
}, mc.cores = 4L) |> unlist()
op <- par(mfrow = c(1,2))
MASS::truehist(sim_complex)
MASS::truehist(sim_simple)
par(op)
quantile(sim_complex)
```

```
0% 25% 50% 75% 100%
57  88  94 101 131
```

```
quantile(sim_simple)
```

```
0% 25% 50% 75% 100%
58  87  94 101 135
```

```
plotter(sim_complex, sim_simple)
```

Chapter 11

Namespace Documentation

11.1 epiworld::sampler Namespace Reference

Functions for sampling viruses.

Functions

- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`std::function< void(Agent< TSeq > *, Model< TSeq > *)> make_update_susceptible (std::vector< epiworld_fast_uint > exclude={})`
Make a function to sample from neighbors.
- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`std::function< Virus< TSeq > *(Agent< TSeq > *, Model< TSeq > *)> make_sample_virus_neighbors (std::vector< epiworld_fast_uint > exclude={})`
Make a function to sample from neighbors.
- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`Virus< TSeq > * sample_virus_single (Agent< TSeq > *p, Model< TSeq > *m)`
Sample from neighbors pool of viruses (at most one)

11.1.1 Detailed Description

Functions for sampling viruses.

11.1.2 Function Documentation

11.1.2.1 `make_sample_virus_neighbors()`

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::function<Virus<TSeq>*(Agent<TSeq>*,Model<TSeq>*)> epiworld::sampler::make_sample_virus_neighbors (
    std::vector< epiworld_fast_uint > exclude = {} ) [inline]
```

Make a function to sample from neighbors.

This is akin to the function `default_update_susceptible`, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>exclude</i>	unsigned vector of states that need to be excluded from the sampling
----------------	--

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

11.1.2.2 make_update_susceptible()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::function<void (Agent<TSeq>*, Model<TSeq>*)> epiworld::sampler::make_update_susceptible (
    std::vector< epiworld_fast_uint > exclude = {} ) [inline]
```

Make a function to sample from neighbors.

This is akin to the function default_update_susceptible, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>exclude</i>	unsigned vector of states that need to be excluded from the sampling
----------------	--

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

11.1.2.3 sample_virus_single()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
Virus<TSeq>* epiworld::sampler::sample_virus_single (
    Agent< TSeq > * p,
    Model< TSeq > * m ) [inline]
```

Sample from neighbors pool of viruses (at most one)

This function samples at most one virus from the pool of viruses from its neighbors. If no virus is selected, the function returns a `nullptr`, otherwise it returns a pointer to the selected virus.

This can be used to build a new update function (EPI_NEW_UPDATEFUN.)

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>p</i>	Pointer to person
<i>m</i>	Pointer to the model

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

11.2 sampler Namespace Reference

Functions for sampling viruses.

Functions

- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`std::function< void(Agent< TSeq > *, Model< TSeq > *)> make_update_susceptible (std::vector< epiworld_fast_uint > exclude={})`
Make a function to sample from neighbors.
- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`std::function< Virus< TSeq > *(Agent< TSeq > *, Model< TSeq > *)> make_sample_virus_neighbors (std::vector< epiworld_fast_uint > exclude={})`
Make a function to sample from neighbors.
- `template<typename TSeq = EPI_DEFAULT_TSEQ>`
`Virus< TSeq > * sample_virus_single (Agent< TSeq > *p, Model< TSeq > *m)`
Sample from neighbors pool of viruses (at most one)

11.2.1 Detailed Description

Functions for sampling viruses.

11.2.2 Function Documentation

11.2.2.1 `make_sample_virus_neighbors()`

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::function<Virus<TSeq>*(Agent<TSeq>*,Model<TSeq>*)> sampler::make_sample_virus_neighbors
(
    std::vector< epiworld_fast_uint > exclude = {} ) [inline]
```

Make a function to sample from neighbors.

This is akin to the function `default_update_susceptible`, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>exclude</i>	unsigned vector of states that need to be excluded from the sampling
----------------	--

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

11.2.2.2 make_update_susceptible()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::function<void (Agent<TSeq>*, Model<TSeq>*)> sampler::make_update_susceptible (
    std::vector< epiworld_fast_uint > exclude = {} ) [inline]
```

Make a function to sample from neighbors.

This is akin to the function `default_update_susceptible`, with the difference that it will create a function that supports excluding states from the sampling frame. For example, individuals who have acquired a virus can be excluded if in incubation state.

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>exclude</i>	unsigned vector of states that need to be excluded from the sampling
----------------	--

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

11.2.2.3 sample_virus_single()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
Virus<TSeq>* sampler::sample_virus_single (
    Agent< TSeq > * p,
    Model< TSeq > * m ) [inline]
```

Sample from neighbors pool of viruses (at most one)

This function samples at most one virus from the pool of viruses from its neighbors. If no virus is selected, the function returns a `nullptr`, otherwise it returns a pointer to the selected virus.

This can be used to build a new update function (`EPI_NEW_UPDATEFUN.`)

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>p</i>	Pointer to person
<i>m</i>	Pointer to the model

Returns

Virus<TSeq>* of the selected virus. If none selected (or none available,) returns a nullptr;

12.1 AdjList Class Reference

Public Member Functions

- [AdjList](#) (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
Construct a new Adj List object.
- **AdjList** ([AdjList](#) &&a)
- **AdjList** (const [AdjList](#) &a)
- [AdjList](#) & **operator=** (const [AdjList](#) &a)
- void [read_edgelist](#) (std::string fn, int size, int skip=0, bool directed=true)
Read an edgelist.
- std::map< int, int > **operator()** (epiworld_fast_uint i) const
- void **print** (epiworld_fast_uint limit=20u) const
- size_t [vcount](#) () const
Number of vertices/nodes in the network.
- size_t [ecount](#) () const
Number of edges/arcs/ties in the network.
- std::vector< std::map< int, int > > & **get_dat** ()
- bool [is_directed](#) () const
true if the network is directed.

12.1.1 Constructor & Destructor Documentation

12.1.1.1 AdjList()

```
AdjList::AdjList (  
    const std::vector< int > & source,  
    const std::vector< int > & target,  
    int size,  
    bool directed ) [inline]
```

Construct a new Adj List object.

Ids in the network are assume to range from 0 to size - 1.

Parameters

<i>source</i>	Unsigned int vector with the source
<i>target</i>	Unsigned int vector with the target
<i>size</i>	Number of vertices in the network.
<i>directed</i>	Bool true if the network is directed

12.1.2 Member Function Documentation

12.1.2.1 read_edgelist()

```
void AdjList::read_edgelist (
    std::string fn,
    int size,
    int skip = 0,
    bool directed = true ) [inline]
```

Read an edgelist.

Ids in the network are assume to range from 0 to `size - 1`.

Parameters

<i>fn</i>	Path to the file
<i>skip</i>	Number of lines to skip (e.g., 1 if there's a header)
<i>directed</i>	true if the network is directed
<i>size</i>	Number of vertices in the network.

The documentation for this class was generated from the following files:

- include/epiworld/adjlist-bones.hpp
- include/epiworld/adjlist-meat.hpp

12.2 epiworld::AdjList Class Reference

Public Member Functions

- [AdjList](#) (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
Construct a new Adj List object.
- [AdjList](#) ([AdjList](#) &&a)
- [AdjList](#) (const [AdjList](#) &a)
- [AdjList](#) & [operator=](#) (const [AdjList](#) &a)
- void [read_edgelist](#) (std::string fn, int size, int skip=0, bool directed=true)
Read an edgelist.

- `std::map< int, int > operator()` (`epiworld_fast_uint i`) `const`
- `void print` (`epiworld_fast_uint limit=20u`) `const`
- `size_t vcount` () `const`
Number of vertices/nodes in the network.
- `size_t ecount` () `const`
Number of edges/arcs/ties in the network.
- `std::vector< std::map< int, int > > & get_dat` ()
- `bool is_directed` () `const`
true if the network is directed.

12.2.1 Constructor & Destructor Documentation

12.2.1.1 AdjList()

```
AdjList::AdjList (
    const std::vector< int > & source,
    const std::vector< int > & target,
    int size,
    bool directed ) [inline]
```

Construct a new Adj List object.

Ids in the network are assume to range from 0 to `size - 1`.

Parameters

<i>source</i>	Unsigned int vector with the source
<i>target</i>	Unsigned int vector with the target
<i>size</i>	Number of vertices in the network.
<i>directed</i>	Bool true if the network is directed

12.2.2 Member Function Documentation

12.2.2.1 read_edgelist()

```
void AdjList::read_edgelist (
    std::string fn,
    int size,
    int skip = 0,
    bool directed = true ) [inline]
```

Read an edgelist.

Ids in the network are assume to range from 0 to `size - 1`.

Parameters

<i>fn</i>	Path to the file
<i>skip</i>	Number of lines to skip (e.g., 1 if there's a header)
<i>directed</i>	<code>true</code> if the network is directed
<i>size</i>	Number of vertices in the network.

The documentation for this class was generated from the following file:

- `epiworld.hpp`

12.3 `Agent< TSeq >` Class Template Reference

`Agent` (agents)

```
#include <agent-bones.hpp>
```

Public Member Functions

- **Agent** (`Agent< TSeq > &&p`)
- **Agent** (const `Agent< TSeq > &p`)
- `Agent< TSeq > & operator=` (const `Agent< TSeq > &other_agent`)
- int `get_id` () const
Id of the individual.
- `VirusPtr< TSeq > & get_virus` ()
- const `VirusPtr< TSeq > & get_virus` () const
- `ToolPtr< TSeq > & get_tool` (int i)
- `Tools< TSeq > get_tools` ()
- const `Tools_const< TSeq > get_tools` () const
- size_t `get_n_tools` () const noexcept
- void `mutate_virus` ()
- void `add_neighbor` (`Agent< TSeq > &p`, bool check_source=true, bool check_target=true)
- void `swap_neighbors` (`Agent< TSeq > &other`, size_t n_this, size_t n_other)
Swaps neighbors between the current agent and agent other
- std::vector< `Agent< TSeq > *` > `get_neighbors` ()
- size_t `get_n_neighbors` () const
- void `change_state` (`Model< TSeq > *model`, epiworld_fast_uint new_state, epiworld_fast_int queue=0)
- const unsigned int & `get_state` () const
- void `reset` ()
- bool `has_tool` (epiworld_fast_uint t) const
- bool `has_tool` (std::string name) const
- bool `has_tool` (const `Tool< TSeq > &t`) const
- bool `has_virus` (epiworld_fast_uint t) const
- bool `has_virus` (std::string name) const
- bool `has_virus` (const `Virus< TSeq > &v`) const
- bool `has_entity` (epiworld_fast_uint t) const
- bool `has_entity` (std::string name) const
- void `print` (bool compressed=false) const
- `Entities< TSeq > get_entities` ()
- const `Entities_const< TSeq > get_entities` () const

- const [Entity](#)< TSeq > & **get_entity** (size_t i) const
- [Entity](#)< TSeq > & **get_entity** (size_t i)

- bool **operator!=** (const [Agent](#)< TSeq > &other) const

Add/Remove Virus/Tool

Any of these is ultimately reflected at the end of the iteration.

Parameters

tool	Tool to add
virus	Virus to add
state_new	state after the change
queue	

- void **add_tool** (ToolPtr< TSeq > &tool, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **add_tool** (const [Tool](#)< TSeq > &tool, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **set_virus** (VirusPtr< TSeq > &virus, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **set_virus** (const [Virus](#)< TSeq > &virus, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **add_entity** ([Entity](#)< TSeq > &entity, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_tool** (epiworld_fast_uint tool_idx, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_tool** (ToolPtr< TSeq > &tool, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_virus** ([Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_entity** (epiworld_fast_uint entity_idx, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_entity** ([Entity](#)< TSeq > &entity, [Model](#)< TSeq > *model, epiworld_fast_int state_new=-99, epiworld_fast_int queue=-99)
- void **rm_agent_by_virus** ([Model](#)< TSeq > *model)
[Agent](#) removed by virus.

Get the rates (multipliers) for the agent

Parameters

v	A pointer to a virus.
---	-----------------------

Returns

epiworld_double

- epiworld_double **get_susceptibility_reduction** (VirusPtr< TSeq > v, [Model](#)< TSeq > *model)
- epiworld_double **get_transmission_reduction** (VirusPtr< TSeq > v, [Model](#)< TSeq > *model)
- epiworld_double **get_recovery_enhancer** (VirusPtr< TSeq > v, [Model](#)< TSeq > *model)
- epiworld_double **get_death_reduction** (VirusPtr< TSeq > v, [Model](#)< TSeq > *model)

- double & [operator\(\)](#) (size_t j)
Access the j-th column of the agent.
- double & **operator[]** (size_t j)
- double **operator()** (size_t j) const
- double **operator[]** (size_t j) const

Friends

- class **Model**< TSeq >

12.3.1 Detailed Description

```
template<typename TSeq>
class Agent< TSeq >
```

[Agent](#) (agents)

Template Parameters

<i>TSeq</i>	Sequence type (should match TSeq across the model)
-------------	--

12.3.2 Member Function Documentation

12.3.2.1 operator()()

```
template<typename TSeq >
double & Agent< TSeq >::operator() (
    size_t j ) [inline]
```

Access the j-th column of the agent.

If an external array has been specified, then these two functions can be used to access additional agent's features not included in the model.

The `operator[]` method is with no boundary check, whereas the `operator()` method checks boundaries. The former can result in a segfault.

Parameters

<i>j</i>	
----------	--

Returns

double&

12.3.2.2 swap_neighbors()

```
template<typename TSeq >
void Agent< TSeq >::swap_neighbors (
    Agent< TSeq > & other,
    size_t n_this,
    size_t n_other ) [inline]
```

Swaps neighbors between the current agent and agent *other*

Parameters

<i>other</i>	
<i>n_this</i>	
<i>n_other</i>	

12.3.3 Friends And Related Function Documentation**12.3.3.1 default_rm_entity**

```
template<typename TSeq >
void default_rm_entity (
    Event< TSeq > & a,
    Model< TSeq > * m ) [friend]
```

< Last entity of the agent

< Last agent of the entity

12.4.1 Detailed Description

```
template<typename TSeq>
class epiworld::Agent< TSeq >
```

[Agent](#) (agents)

Template Parameters

<i>TSeq</i>	Sequence type (should match TSeq across the model)
-------------	--

12.4.2 Member Function Documentation

12.4.2.1 operator()()

```
template<typename TSeq >
double & Agent< TSeq >::operator() (
    size_t j ) [inline]
```

Access the j-th column of the agent.

If an external array has been specified, then these two functions can be used to access additional agent's features not included in the model.

The `operator[]` method is with no boundary check, whereas the `operator()` method checks boundaries. The former can result in a segfault.

Parameters

<i>j</i>	
----------	--

Returns

double&

12.4.2.2 swap_neighbors()

```
template<typename TSeq >
void Agent< TSeq >::swap_neighbors (
    Agent< TSeq > & other,
    size_t n_this,
    size_t n_other ) [inline]
```

Swaps neighbors between the current agent and agent `other`

Parameters

<i>other</i>	
<i>n_this</i>	
<i>n_other</i>	

12.4.3 Friends And Related Function Documentation

12.4.3.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
    Event< TSeq > & a,
    Model< TSeq > * m ) [friend]
```

< Last entity of the agent

< Last agent of the entity

- size_t **size** () const noexcept

12.5.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class AgentsSample< TSeq >
```

Sample of agents.

This class allows sampling agents from Entity<TSeq> and Model<TSeq>.

Template Parameters

<i>TSeq</i>	
-------------	--

12.5.2 Constructor & Destructor Documentation

12.5.2.1 AgentsSample()

```
template<typename TSeq >
AgentsSample< TSeq >::AgentsSample (
    Model< TSeq > * model,
    Agent< TSeq > & agent_,
    size_t n,
    std::vector< size_t > states_ = {},
    bool truncate = false ) [inline]
```

Sample from the agent's entities.

For example, how many individuals the agent contacts in a given point in time.

Template Parameters

<i>TSeq</i>	
-------------	--

Parameters

<i>agent</i> ↔	
—	
<i>n</i>	Sample size
<i>truncate</i>	If the agent has fewer than <i>n</i> connections, then <i>truncate</i> = true will automatically reduce the number of possible samples. Otherwise, if false, then it returns an error.

12.7 ContactTracing Class Reference

Class for tracing contacts between agents.

```
#include <contacttracing-bones.hpp>
```

Public Member Functions

- [ContactTracing](#) (size_t n_agents, size_t max_contacts)
Construct a new Contact Tracing object.
- void [add_contact](#) (size_t agent_a, size_t agent_b, size_t day)
Add a contact between two agents at a given day.
- size_t [get_n_contacts](#) (size_t agent)
Get the number of contacts for an agent.
- std::pair< size_t, size_t > [get_contact](#) (size_t agent, size_t idx)
Get the contact object.
- void [reset](#) (size_t n_agents, size_t max_contacts)
Reset the contact tracing data.
- void [print](#) (size_t agent)
Print the contacts of an agent.

12.7.1 Detailed Description

Class for tracing contacts between agents.

The class assumes that contacts are stored in a matrix-like structure, where rows are agents and columns are contacts in a column-major format. Each entry stores the id of the contact and the day of the contact is stored in a parallel array.

The maximum number of contacts per agent is fixed at initialization time. If more contacts are added, they will overwrite previous contacts in a circular buffer fashion.

12.7.2 Constructor & Destructor Documentation

12.7.2.1 ContactTracing()

```
ContactTracing::ContactTracing (
    size_t n_agents,
    size_t max_contacts ) [inline]
```

Construct a new Contact Tracing object.

Parameters

<i>n_agents</i>	Agents in the system, usually <code>Model<TSeq>::size()</code> .
<i>max_contacts</i>	Maximum number of contacts to track per agent.

12.7.3 Member Function Documentation

12.7.3.1 add_contact()

```
void ContactTracing::add_contact (
    size_t agent_a,
    size_t agent_b,
    size_t day ) [inline]
```

Add a contact between two agents at a given day.

Parameters

<i>agent</i> ↔ <i>_a</i>	Agent id (usually infectious agent)
<i>agent</i> ↔ <i>_b</i>	Agent id (usually susceptible agent)
<i>day</i>	Day of the contact (usually <code>Model<TSeq>::today()</code>).

12.7.3.2 get_contact()

```
std::pair< size_t, size_t > ContactTracing::get_contact (
    size_t agent,
    size_t idx ) [inline]
```

Get the contact object.

Parameters

<i>agent</i>	Source agent (id)
<i>idx</i>	Index of the contact (0 to <code>get_n_contacts(agent)-1</code>)

Returns

`std::pair<size_t, size_t>` with (contact_id, contact_day)

Exceptions

<code>std::out_of_range</code>	if idx is out of range.
--------------------------------	-------------------------

12.7.3.3 get_n_contacts()

```
size_t ContactTracing::get_n_contacts (
    size_t agent ) [inline]
```

Get the number of contacts for an agent.

Parameters

<i>agent</i>	Agent id
--------------	--------------------------

Returns

size_t Number of contacts recorded for that agent (can be more than max_contacts)

12.7.3.4 print()

```
void ContactTracing::print (
    size_t agent ) [inline]
```

Print the contacts of an agent.

Parameters

<i>agent</i>	Agent id
--------------	--------------------------

12.7.3.5 reset()

```
void ContactTracing::reset (
    size_t n_agents,
    size_t max_contacts ) [inline]
```

Reset the contact tracing data.

Usually called by [Model<TSeq>::reset\(\)](#).

Parameters

<i>n_agents</i>	Number of agents
<i>max_contacts</i>	Maximum number of contacts to track per agent

The documentation for this class was generated from the following file:

- include/epiworld/contacttracing-bones.hpp

12.8 epiworld::ContactTracing Class Reference

Class for tracing contacts between agents.

```
#include <epiworld.hpp>
```

Public Member Functions

- [ContactTracing](#) (size_t n_agents, size_t max_contacts)
Construct a new Contact Tracing object.
- void [add_contact](#) (size_t agent_a, size_t agent_b, size_t day)
Add a contact between two agents at a given day.
- size_t [get_n_contacts](#) (size_t agent)
Get the number of contacts for an agent.
- std::pair< size_t, size_t > [get_contact](#) (size_t agent, size_t idx)
Get the contact object.
- void [reset](#) (size_t n_agents, size_t max_contacts)
Reset the contact tracing data.
- void [print](#) (size_t agent)
Print the contacts of an agent.

12.8.1 Detailed Description

Class for tracing contacts between agents.

The class assumes that contacts are stored in a matrix-like structure, where rows are agents and columns are contacts in a column-major format. Each entry stores the id of the contact and the day of the contact is stored in a parallel array.

The maximum number of contacts per agent is fixed at initialization time. If more contacts are added, they will overwrite previous contacts in a circular buffer fashion.

12.8.2 Constructor & Destructor Documentation

12.8.2.1 ContactTracing()

```
ContactTracing::ContactTracing (
    size_t n_agents,
    size_t max_contacts ) [inline]
```

Construct a new Contact Tracing object.

Parameters

<i>n_agents</i>	Agents in the system, usually <code>Model<TSeq>::size()</code> .
<i>max_contacts</i>	Maximum number of contacts to track per agent.

12.8.3 Member Function Documentation

12.8.3.1 add_contact()

```
void ContactTracing::add_contact (
    size_t agent_a,
    size_t agent_b,
    size_t day ) [inline]
```

Add a contact between two agents at a given day.

Parameters

<i>agent</i> ↔ <i>_a</i>	Agent id (usually infectious agent)
<i>agent</i> ↔ <i>_b</i>	Agent id (usually susceptible agent)
<i>day</i>	Day of the contact (usually <code>Model<TSeq>::today()</code>).

12.8.3.2 get_contact()

```
std::pair< size_t, size_t > ContactTracing::get_contact (
    size_t agent,
    size_t idx ) [inline]
```

Get the contact object.

Parameters

<i>agent</i>	Source agent (id)
<i>idx</i>	Index of the contact (0 to <code>get_n_contacts(agent)-1</code>)

Returns

`std::pair<size_t, size_t>` with (contact_id, contact_day)

Exceptions

<code>std::out_of_range</code>	if idx is out of range.
--------------------------------	-------------------------

12.8.3.3 get_n_contacts()

```
size_t ContactTracing::get_n_contacts (
    size_t agent ) [inline]
```

Get the number of contacts for an agent.

Parameters

<i>agent</i>	Agent id
--------------	--------------------------

Returns

size_t Number of contacts recorded for that agent (can be more than max_contacts)

12.8.3.4 print()

```
void ContactTracing::print (
    size_t agent ) [inline]
```

Print the contacts of an agent.

Parameters

<i>agent</i>	Agent id
--------------	--------------------------

12.8.3.5 reset()

```
void ContactTracing::reset (
    size_t n_agents,
    size_t max_contacts ) [inline]
```

Reset the contact tracing data.

Usually called by [Model<TSeq>::reset\(\)](#).

Parameters

<i>n_agents</i>	Number of agents
<i>max_contacts</i>	Maximum number of contacts to track per agent

12.9.1 Detailed Description

```
template<typename TSeq>
class DataBase< TSeq >
```

Statistical data about the process.

Template Parameters

<i>TSeq</i>	
-------------	--

12.9.2 Member Function Documentation

12.9.2.1 `get_generation_time()`

```
template<typename TSeq >
void DataBase< TSeq >::get_generation_time (
    std::vector< int > & agent_id,
    std::vector< int > & virus_id,
    std::vector< int > & time,
    std::vector< int > & gentime ) const [inline]
```

Get the generation time.

Calculates the generating time

Parameters

<i>agent_id, virus_id, time, gentime</i>	vectors where to save the values
--	----------------------------------

The generation time is the time between the infection of the source and the infection of the target.

12.9.2.2 `get_reproductive_number()`

```
template<typename TSeq >
MapVec_type< int, int > DataBase< TSeq >::get_reproductive_number [inline]
```

Computes the reproductive number of each case.

By definition, whereas it computes R0 (basic reproductive number) or Rt/R (the effective reproductive number) will depend on whether the virus is allowed to circulate naïvely or not, respectively.

Parameters

<i>fn</i>	File where to write out the reproductive number.
-----------	--

In the case of `MapVec_type<int, int>`, the key is a vector of 3 integers:

- **Virus** id
- Source id
- Date when the source was infected

12.9.2.3 get_transition_probability()

```
template<typename TSeq >
std::vector< epiworld_double > DataBase< TSeq >::get_transition_probability (
    bool print = true,
    bool normalize = true ) const [inline]
```

Calculates the transition probabilities.

Parameters

<i>print</i>	Print the transition matrix.
<i>normalize</i>	Normalize the transition matrix. Otherwise, it returns raw counts.

The transition matrix is the matrix of the counts of transitions from one state to another. So the ij-th element of the matrix is the number of transitions from state i to state j (when not normalized), or the probability of transitioning from state i to state j (when normalized).

Returns

std::vector< epiworld_double >

12.9.2.4 get_transmissions()

```
template<typename TSeq >
void DataBase< TSeq >::get_transmissions (
    std::vector< int > & date,
    std::vector< int > & source,
    std::vector< int > & target,
    std::vector< int > & virus,
    std::vector< int > & source_exposure_date ) const [inline]
```

Get the transmissions object.

Parameters

<i>date</i>	
<i>source</i>	
<i>target</i>	
<i>virus</i>	
<i>source_exposure_date</i>	

12.9.2.5 operator==() [1/3]

```
bool DataBase< std::vector< int > >::operator== (
    const DataBase< std::vector< int >> & other ) const [inline]
```

< Date of the transmission eve,

< Id of the sour,

< Id of the targ,

< Id of the varia,

< Date when the source acquired the varia,

12.9.2.6 operator==() [2/3]

```
bool DataBase< std::vector< int > >::operator== (
    const DataBase< std::vector< int >> & other ) const [inline]
```

< Date of the transmission eve,

< Id of the sour,

< Id of the targ,

< Id of the varia,

< Date when the source acquired the varia,

12.9.2.7 operator==() [3/3]

```
template<typename TSeq >
bool DataBase< TSeq >::operator== (
    const DataBase< TSeq > & other ) const [inline]
```

< Date of the transmission eve

< Id of the sour

< Id of the targ

< Id of the varia

< Date when the source acquired the varia

12.9.2.8 record_virus()

```
template<typename TSeq >
void DataBase< TSeq >::record_virus (
    Virus< TSeq > & v ) [inline]
```

Registering a new variant.

Parameters

v	Pointer to the new virus. Since viruses are originated in the agent, the numbers simply move around. From the parent virus to the new virus. And the total number of infected does not change.
---	--

12.10.1 Detailed Description

```
template<typename TSeq>
class epiworld::DataBase< TSeq >
```

Statistical data about the process.

Template Parameters

<i>TSeq</i>	
-------------	--

12.10.2 Member Function Documentation

12.10.2.1 `get_generation_time()`

```
template<typename TSeq >
void DataBase< TSeq >::get_generation_time (
    std::vector< int > & agent_id,
    std::vector< int > & virus_id,
    std::vector< int > & time,
    std::vector< int > & gentime ) const [inline]
```

Get the generation time.

Calculates the generating time

Parameters

<i>agent_id, virus_id, time, gentime</i>	vectors where to save the values
--	----------------------------------

The generation time is the time between the infection of the source and the infection of the target.

12.10.2.2 `get_reproductive_number()`

```
template<typename TSeq >
MapVec_type< int, int > DataBase< TSeq >::get_reproductive_number [inline]
```

Computes the reproductive number of each case.

By definition, whereas it computes R_0 (basic reproductive number) or R_t/R (the effective reproductive number) will depend on whether the virus is allowed to circulate naïvely or not, respectively.

Parameters

<i>fn</i>	File where to write out the reproductive number.
-----------	--

In the case of `MapVec_type<int, int>`, the key is a vector of 3 integers:

- [Virus](#) id
- Source id
- Date when the source was infected

12.10.2.3 `get_transition_probability()`

```
template<typename TSeq >
std::vector< epiworld_double > DataBase< TSeq >::get_transition_probability (
    bool print = true,
    bool normalize = true ) const [inline]
```

Calculates the transition probabilities.

Parameters

<i>print</i>	Print the transition matrix.
<i>normalize</i>	Normalize the transition matrix. Otherwise, it returns raw counts.

The transition matrix is the matrix of the counts of transitions from one state to another. So the ij -th element of the matrix is the number of transitions from state i to state j (when not normalized), or the probability of transitioning from state i to state j (when normalized).

Returns

`std::vector< epiworld_double >`

12.10.2.4 `get_transmissions()`

```
template<typename TSeq >
void DataBase< TSeq >::get_transmissions (
    std::vector< int > & date,
    std::vector< int > & source,
    std::vector< int > & target,
    std::vector< int > & virus,
    std::vector< int > & source_exposure_date ) const [inline]
```

Get the transmissions object.

Parameters

<i>date</i>	
<i>source</i>	
<i>target</i>	
<i>virus</i>	
<i>source_exposure_date</i>	

12.10.2.5 operator==()

```
template<typename TSeq >
bool DataBase< TSeq >::operator== (
    const DataBase< TSeq > & other ) const [inline]
```

< Date of the transmission eve

< Id of the sour

< Id of the targ

< Id of the varia

< Date when the source acquired the varia

12.10.2.6 record_virus()

```
template<typename TSeq >
void DataBase< TSeq >::record_virus (
    Virus< TSeq > & v ) [inline]
```

Registering a new variant.

Parameters

<i>v</i>	Pointer to the new virus. Since viruses are originated in the agent, the numbers simply move around. From the parent virus to the new virus. And the total number of infected does not change.

- std::vector< size_t >::iterator **end** ()
- std::vector< size_t >::const_iterator **begin** () const
- std::vector< size_t >::const_iterator **end** () const
- size_t **operator[]** (size_t i)
- int **get_id** () const noexcept
- const std::string & **get_name** () const noexcept
- void **set_state** (epiworld_fast_int init, epiworld_fast_int post)
- void **set_queue** (epiworld_fast_int init, epiworld_fast_int post)
- void **get_state** (epiworld_fast_int *init, epiworld_fast_int *post)
- void **get_queue** (epiworld_fast_int *init, epiworld_fast_int *post)
- void **reset** ()
- bool **operator==** (const [Entity](#)< TSeq > &other) const
- bool **operator!=** (const [Entity](#)< TSeq > &other) const

Entity distribution

These functions are used for distributing agents among entities. The idea is to have a flexible way of distributing agents among entities.

- void **distribute** ([Model](#)< TSeq > *model)
- std::vector< size_t > & **get_agents** ()
- void **print** () const
- void **set_distribution** (EntityToAgentFun< TSeq > fun)

Friends

- class **Agent**< TSeq >
- class **AgentsSample**< TSeq >
- class **Model**< TSeq >
- void **default_add_entity** ([Event](#)< TSeq > &a, [Model](#)< TSeq > *m)
- void **default_rm_entity** ([Event](#)< TSeq > &a, [Model](#)< TSeq > *m)

12.15.1 Constructor & Destructor Documentation

12.15.1.1 Entity()

```
template<typename TSeq >
Entity< TSeq >::Entity (
    std::string name,
    EntityToAgentFun< TSeq > fun = nullptr ) [inline]
```

Constructs an [Entity](#) object.

This constructor initializes an [Entity](#) object with the specified parameters.

Parameters

<i>name</i>	The name of the entity.
<i>fun</i>	A function pointer to a function that maps the entity to an agent.

12.15.2 Friends And Related Function Documentation

12.15.2.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
    Event< TSeq > & a,
    Model< TSeq > * m ) [friend]
```

< Last entity of the agent

< Last agent of the entity

< Last entity of the agent

< Last agent of the entity

12.16.1 Constructor & Destructor Documentation

12.16.1.1 Entity()

```
template<typename TSeq >
epiworld::Entity< TSeq >::Entity (
    std::string name,
    EntityToAgentFun< TSeq > fun = nullptr ) [inline]
```

Constructs an Entity object.

This constructor initializes an Entity object with the specified parameters.

Parameters

<i>name</i>	The name of the entity.
<i>fun</i>	A function pointer to a function that maps the entity to an agent.

12.16.2 Friends And Related Function Documentation

12.16.2.1 default_rm_entity

```
template<typename TSeq >
void default_rm_entity (
    Event< TSeq > & a,
    Model< TSeq > * m ) [friend]
```

< Last entity of the agent

< Last agent of the entity

The documentation for this class was generated from the following file:

- epiworld.hpp

12.17 epiworld::Event< TSeq > Struct Template Reference

[Event](#) data for update an agent.

```
#include <epiworld.hpp>
```

Public Member Functions

- [Event](#) ([Agent](#)< TSeq > *agent_, VirusPtr< TSeq > &virus_, ToolPtr< TSeq > &tool_, [Entity](#)< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > &call_, int idx_agent_, int idx_object_)↵

Construct a new [Event](#) object.

Public Attributes

- [Agent](#)< TSeq > * **agent**
- VirusPtr< TSeq > **virus**
- ToolPtr< TSeq > **tool**
- [Entity](#)< TSeq > * **entity**
- epiworld_fast_int **new_state**
- epiworld_fast_int **queue**
- EventFun< TSeq > **call**
- int **idx_agent**
- int **idx_object**

12.17.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
struct epiworld::Event< TSeq >
```

[Event](#) data for update an agent.

Template Parameters

<i>TSeq</i>	
-------------	--

12.17.2 Constructor & Destructor Documentation

12.17.2.1 Event()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
epiworld::Event< TSeq >::Event (
    Agent< TSeq > * agent_,
    VirusPtr< TSeq > & virus_,
    ToolPtr< TSeq > & tool_,
    Entity< TSeq > * entity_,
    epiworld_fast_int new_state_,
    epiworld_fast_int queue_,
    EventFun< TSeq > & call_,
    int idx_agent_,
    int idx_object_ ) [inline]
```

Construct a new [Event](#) object.

All the parameters are rather optional.

Parameters

<i>agent_</i>	Agent over who the action will happen
<i>virus_</i>	Virus to add
<i>tool_</i>	Tool to add
<i>virus_idx</i>	Index of virus to be removed (if needed)
<i>tool_idx</i>	Index of tool to be removed (if needed)
<i>new_↔ state_</i>	Next state
<i>queue_</i>	Effect on the queue
<i>call_</i>	The action call (if needed)
<i>idx_↔ agent_</i>	Location of agent in object.
<i>idx_↔ object_</i>	Location of object in agent.

The documentation for this struct was generated from the following file:

- epiworld.hpp

12.18 Event< TSeq > Struct Template Reference

[Event](#) data for update an agent.

```
#include <config.hpp>
```

Collaboration diagram for Event< TSeq >:

Public Member Functions

- [Event](#) ([Agent](#)< TSeq > *agent_, VirusPtr< TSeq > &virus_, ToolPtr< TSeq > &tool_, [Entity](#)< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > &call_, int idx_agent←_, int idx_object_)

Construct a new [Event](#) object.

Public Attributes

- [Agent](#)< TSeq > * **agent**
- VirusPtr< TSeq > **virus**
- ToolPtr< TSeq > **tool**
- [Entity](#)< TSeq > * **entity**
- epiworld_fast_int **new_state**
- epiworld_fast_int **queue**
- EventFun< TSeq > **call**
- int **idx_agent**
- int **idx_object**

12.18.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
struct Event< TSeq >
```

[Event](#) data for update an agent.

Template Parameters

<i>TSeq</i>	
-------------	--

12.18.2 Constructor & Destructor Documentation

12.18.2.1 Event()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
Event< TSeq >::Event (
    Agent< TSeq > * agent_,
    VirusPtr< TSeq > & virus_,
    ToolPtr< TSeq > & tool_,
    Entity< TSeq > * entity_,
    epiworld_fast_int new_state_,
    epiworld_fast_int queue_,
    EventFun< TSeq > & call_,
    int idx_agent_,
    int idx_object_ ) [inline]
```

Construct a new [Event](#) object.

All the parameters are rather optional.

Parameters

<i>agent_</i>	Agent over who the action will happen
<i>virus_</i>	Virus to add
<i>tool_</i>	Tool to add
<i>virus_idx</i>	Index of virus to be removed (if needed)
<i>tool_idx</i>	Index of tool to be removed (if needed)
<i>new_↔ state_</i>	Next state
<i>queue_</i>	Effect on the queue
<i>call_</i>	The action call (if needed)
<i>idx_↔ agent_</i>	Location of agent in object.
<i>idx_↔ object_</i>	Location of object in agent.

The documentation for this struct was generated from the following files:

12.19 epiworld::GlobalEvent< TSeq > Class Template Reference

Template for a Global [Event](#).

```
#include <epiworld.hpp>
```

Public Member Functions

- [GlobalEvent](#) (GlobalFun< TSeq > fun, std::string name, int day=-99)
Construct a new Global [Event](#) object.
- void **operator()** ([Model](#)< TSeq > *m, int day)
- void **set_name** (std::string name)
- std::string **get_name** () const
- void **set_day** (int day)
- int **get_day** () const
- void **print** () const
- bool **operator==** (const [GlobalEvent](#)< TSeq > &other) const
- bool **operator!=** (const [GlobalEvent](#)< TSeq > &other) const

12.19.1 Detailed Description

```
template<typename TSeq>
class epiworld::GlobalEvent< TSeq >
```

Template for a Global [Event](#).

Global events are functions that [Model](#)<TSeq> executes at the end of a day.

12.19.2 Constructor & Destructor Documentation

12.19.2.1 GlobalEvent()

```
template<typename TSeq >
GlobalEvent< TSeq >::GlobalEvent (
    GlobalFun< TSeq > fun,
    std::string name,
    int day = -99 ) [inline]
```

Construct a new Global [Event](#) object.

Parameters

<i>fun</i>	A function that takes a Model <TSeq> * as argument and returns void.
<i>name</i>	A descriptive name for the action.
<i>day</i>	The day when the action will be executed. If negative, it will be executed every day.

The documentation for this class was generated from the following file:

- epiworld.hpp

12.20 GlobalEvent< TSeq > Class Template Reference

Template for a Global [Event](#).

```
#include <globalevent-bones.hpp>
```

Public Member Functions

- [GlobalEvent](#) (GlobalFun< TSeq > fun, std::string name, int day=-99)
Construct a new Global [Event](#) object.
- void **operator()** ([Model](#)< TSeq > *m, int day)
- void **set_name** (std::string name)
- std::string **get_name** () const
- void **set_day** (int day)
- int **get_day** () const
- void **print** () const
- bool **operator==** (const [GlobalEvent](#)< TSeq > &other) const
- bool **operator!=** (const [GlobalEvent](#)< TSeq > &other) const

12.20.1 Detailed Description

```
template<typename TSeq>
class GlobalEvent< TSeq >
```

Template for a Global [Event](#).

Global events are functions that [Model](#)<TSeq> executes at the end of a day.

12.20.2 Constructor & Destructor Documentation

12.20.2.1 GlobalEvent()

```
template<typename TSeq >
GlobalEvent< TSeq >::GlobalEvent (
    GlobalFun< TSeq > fun,
    std::string name,
    int day = -99 ) [inline]
```

Construct a new Global [Event](#) object.

Parameters

<i>fun</i>	A function that takes a Model <TSeq> * as argument and returns void.
<i>name</i>	A descriptive name for the action.
<i>day</i>	The day when the action will be executed. If negative, it will be executed every day.

The documentation for this class was generated from the following files:

- include/epiworld/globalevent-bones.hpp

- **Tool**< TSeq > & **get_tool** (size_t id)
- void **set_agents_data** (double *data_, size_t ncols_)
Set the agents data object.
- double * **get_agents_data** ()
- size_t **get_agents_data_ncols** () const
- void **set_name** (std::string name)
Set the name object.
- std::string **get_name** () const
- bool **operator==** (const **Model**< TSeq > &other) const
- bool **operator!=** (const **Model**< TSeq > &other) const
- void **events_run** ()
Executes the stored action.
- void **draw** (DiagramType diagram_type=DiagramType::Mermaid, const std::string &fn_output="", bool self=false)
Draws a mermaid diagram of the model.

Set the backup object

backup can be used to restore the entire object after a run. This can be useful if the user wishes to have individuals start with the same network from the beginning.

- void **set_backup** ()

Random number generation

Parameters

eng	<i>Random number generator</i>
s	<i>Seed</i>

- void **set_rand_engine** (std::shared_ptr< std::mt19937 > &eng)
- std::shared_ptr< std::mt19937 > & **get_rand_engine** ()
- void **seed** (size_t s)

- void **set_rand_lognormal** (epiworld_double mean, epiworld_double shape)
- void **set_rand_binom** (int n, epiworld_double p)
- void **set_rand_nbinom** (int n, epiworld_double p)
- void **set_rand_geom** (epiworld_double p)
- void **set_rand_pois** (epiworld_double lambda)
- epiworld_double **runif** ()
- epiworld_double **runif** (epiworld_double a, epiworld_double b)
- epiworld_double **rnorm** ()
- epiworld_double **rnorm** (epiworld_double mean, epiworld_double sd)
- epiworld_double **rgamma** ()
- epiworld_double **rgamma** (epiworld_double alpha, epiworld_double beta)
- epiworld_double **rexp** ()
- epiworld_double **rexp** (epiworld_double lambda)
- epiworld_double **rlognormal** ()
- epiworld_double **rlognormal** (epiworld_double mean, epiworld_double shape)
- int **rbinom** ()
- int **rbinom** (int n, epiworld_double p)
- int **rnbinom** ()
- int **rnbinom** (int n, epiworld_double p)
- int **rgeom** ()
- int **rgeom** (epiworld_double p)
- int **rpois** ()
- int **rpois** (epiworld_double lambda)

Add Virus/Tool to the model

This is done before the model has been initialized.

Parameters

v	<i>Virus to be added</i>
t	<i>Tool to be added</i>
preval	<i>Initial prevalence (initial state.) It can be specified as a proportion (between zero and one,) or an integer indicating number of individuals.</i>

- void **add_virus** ([Virus](#)< TSeq > &v)
- void **add_tool** ([Tool](#)< TSeq > &t)
- void **add_entity** ([Entity](#)< TSeq > e)
- void **rm_virus** (size_t virus_pos)
- void **rm_tool** (size_t tool_pos)
- void **rm_entity** (size_t entity_id)

Accessing population of the model

Parameters

fn	<i>std::string Filename of the edgelist file.</i>
skip	<i>int Number of lines to skip in fn.</i>
directed	<i>bool Whether the graph is directed or not.</i>
size	<i>Size of the network.</i>
al	<i>AdjList to read into the model.</i>

- void **agents_from_adjlist** (std::string fn, int size, int skip=0, bool directed=false)
- void **agents_from_edgelist** (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
- void **agents_from_adjlist** ([AdjList](#) al)
- bool **is_directed** () const
- std::vector< [Agent](#)< TSeq > > &**get_agents** ()
Returns a reference to the vector of agents.
- [Agent](#)< TSeq > &**get_agent** (size_t i)
- std::vector< epiworld_fast_uint > **get_agents_states** () const
Returns a vector with the states of the agents.
- std::vector< [Viruses](#)_const< TSeq > > **get_agents_viruses** () const
Returns a const vector with the viruses of the agents.
- std::vector< [Viruses](#)< TSeq > > **get_agents_viruses** ()
Returns a vector with the viruses of the agents.
- std::vector< [Entity](#)< TSeq > > &**get_entities** ()
- [Entity](#)< TSeq > &**get_entity** (size_t entity_id, int *entity_pos=nullptr)
- [Model](#)< TSeq > &**agents_smallworld** (epiworld_fast_uint n=1000, epiworld_fast_uint k=5, bool d=false, epiworld_double p=.01)
- void **agents_empty_graph** (epiworld_fast_uint n=1000)

Functions to run the model*Parameters*

seed	<i>Seed to be used for Pseudo-RNG.</i>
ndays	<i>Number of days (steps) of the simulation.</i>
fun	<i>In the case of <code>run_multiple</code>, a function that is called after each experiment.</i>

- void **update_state** ()
- void **mutate_virus** ()
- void **next** ()
- virtual [Model](#)< TSeq > &**run** (epiworld_fast_uint ndays, int seed=-1)
Runs the simulation (after initialization)
- void **run_multiple** (epiworld_fast_uint ndays, epiworld_fast_uint nexperiments, int seed_=-1, std::function< void(size_t, [Model](#)< TSeq > *)> fun=make_save_run< TSeq >(), bool **reset**=true, bool verbose=true, int nthreads=1)

Rewire the network preserving the degree sequence.

This implementation assumes an undirected network, thus if $\{(i,j), (k,l)\} \rightarrow \{(i,l), (k,j)\}$, the reciprocal is also true, i.e., $\{(j,i), (l,k)\} \rightarrow \{(j,k), (l,i)\}$.

Parameters

proportion	<i>Proportion of ties to be rewired.</i>
------------	--

Returns

A rewired version of the network.

- void **set_rewire_fun** (std::function< void(std::vector< [Agent](#)< TSeq >> *, [Model](#)< TSeq > *, epiworld_double)> fun)
- void **set_rewire_prop** (epiworld_double prop)
- epiworld_double **get_rewire_prop** () const
- void **rewire** ()

Export the network data in edgelist form**Parameters**

fn	<i>std::string. File name.</i>
source	<i>Integer vector</i>
target	<i>Integer vector</i>

When passing the source and target, the function will write the edgelist on those.

- void **write_edgelist** (std::string fn) const
- void **write_edgelist** (std::vector< int > &source, std::vector< int > &target) const

Manage state (states) in the model

The functions `get_state` return the current values for the states included in the model.

Parameters

lab	<i>std::string Name of the state.</i>
-----	---------------------------------------

Returns

add_state returns nothing.*

get_state_ returns a vector of pairs with the states and their labels.*

- void **add_state** (std::string lab, UpdateFun< TSeq > fun=nullptr)
- const std::vector< std::string > & **get_states** () const
- size_t **get_n_states** () const
- const std::vector< UpdateFun< TSeq > > & **get_state_fun** () const
- void **print_state_codes** () const

Initial states

These functions are called before the simulation starts.

Parameters

proportions↔	<i>Vector of proportions for each state.</i>
—	
queue_	<i>Vector of queue for each state.</i>

- virtual [Model](#)< TSeq > & **initial_states** (std::vector< double >, std::vector< int >)

Setting and accessing parameters from the model

Tools can incorporate parameters included in the model. Internally, parameters in the tool are stored as pointers to an `std::map<>` of parameters in the model. Using the `epiworld_fast_uint` method directly fetches the parameters in the order these were added to the tool. Accessing parameters via the `std::string` method involves searching the parameter directly in the `std::map<>` member of the model (so it is not recommended.)

The `par()` function members are aliases for `get_param()`.

In the case of the function `read_params`, users can pass a file listing parameters to be included in the model. Each line in the file should have the following structure:

```
[name of parameter 1]: [value in double]
[name of parameter 2]: [value in double]
...
```

The only condition for parameter names is that these do not include a colon.

Parameters

initial_val	
pname	Name of the parameter to add or to fetch
fn	Path to the file containing parameters

Returns

The current value of the parameter in the model.

- `epiworld_double add_param` (`epiworld_double initial_val`, `std::string pname`, `bool overwrite=false`)
- `Model< TSeq > & read_params` (`std::string fn`, `bool overwrite=false`)
- `epiworld_double get_param` (`epiworld_fast_uint k`)
- `epiworld_double get_param` (`std::string pname`)
- `void set_param` (`std::string pname`, `epiworld_double val`)
- `epiworld_double par` (`std::string pname`) `const`

Set the user data object

Parameters

names	string vector with the names of the variables.
-------	--

- `void set_user_data` (`std::vector< std::string > names`)
[@
- `void add_user_data` (`epiworld_fast_uint j`, `epiworld_double x`)
- `void add_user_data` (`std::vector< epiworld_double > x`)
- `UserData< TSeq > & get_user_data` ()

Queuing system

When queuing is on, the model will keep track of which agents are either in risk of exposure or exposed. This then is used at each step to act only on the aforementioned agents.

- `void queuing_on` ()
Activates the queuing system (default.)
- `Model< TSeq > & queuing_off` ()
Deactivates the queuing system.
- `bool is_queuing_on` () `const`
Query if the queuing system is on.
- `Queue< TSeq > & get_queue` ()
Retrieve the `Queue` object.

Get the susceptibility reduction object

Parameters

v	
---	--

Returns

epiworld_double

- void **set_susceptibility_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_transmission_reduction_mixer** (MixerFun< TSeq > fun)
- void **set_recovery_enhancer_mixer** (MixerFun< TSeq > fun)
- void **set_death_reduction_mixer** (MixerFun< TSeq > fun)

Protected Member Functions

- void **dist_tools** ()
- void **dist_virus** ()
- void **dist_entities** ()
- void **chrono_start** ()
- void **chrono_end** ()
- void **events_add** (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_↵ agent_, int idx_object_)

Construct a new [Event](#) object.

Protected Attributes

- std::string **name** = ""
Name of the model.
- DataBase< TSeq > **db** = DataBase<TSeq>(*this)
- std::vector< Agent< TSeq > > **population** = {}
- bool **using_backup** = true
- std::vector< Agent< TSeq > > **population_backup** = {}
- bool **directed** = false
- std::vector< VirusPtr< TSeq > > **viruses** = {}
- std::vector< ToolPtr< TSeq > > **tools** = {}
- std::vector< Entity< TSeq > > **entities** = {}
- std::vector< Entity< TSeq > > **entities_backup** = {}
- std::shared_ptr< std::mt19937 > **engine** = std::make_shared< std::mt19937 >()
- std::uniform_real_distribution **runifd**
- std::normal_distribution **rnormd**
- std::gamma_distribution **rgammad**
- std::lognormal_distribution **rlognormald**
- std::exponential_distribution **rexp**
- std::binomial_distribution **rbinomd**
- std::negative_binomial_distribution **rnbinomd**
- std::geometric_distribution **rgeomd**
- std::poisson_distribution **rpoissd**
- std::function< void(std::vector< Agent< TSeq > > *, Model< TSeq > *, epiworld_double)> **rewire_fun**
- epiworld_double **rewire_prop** = 0.0
- std::map< std::string, epiworld_double > **parameters**
- epiworld_fast_uint **ndays** = 0
- [Progress](#) **pb**

- `std::vector< UpdateFun< TSeq > > state_fun = {}`
Functions to update states.
- `std::vector< std::string > states_labels = {}`
Labels of the states.
- `std::function< void(Model< TSeq > *)> initial_states_fun`
- `epiworld_fast_uint nstates = 0u`
- `bool verbose = true`
- `int current_date = 0`
- `std::chrono::time_point< std::chrono::steady_clock > time_start`
- `std::chrono::time_point< std::chrono::steady_clock > time_end`
- `std::chrono::duration< epiworld_double, std::micro > time_elapsed`
- `epiworld_fast_uint n_replicates = 0u`
- `std::vector< GlobalEvent< TSeq > > globalevents`
- `Queue< TSeq > queue`
- `bool use_queueing = true`
- `std::vector< Event< TSeq > > events = {}`
Variables used to keep track of the events to be made regarding viruses.
- `epiworld_fast_uint nactions = 0u`

Auxiliary variables for AgentsSample<TSeq> iterators

These variables+objects are used by the AgentsSample<TSeq> class for building efficient iterators over agents. The idea is to reduce the memory allocation, so only during the first call of AgentsSample<TSeq>::AgentsSample(Model<TSeq>) these vectors are allocated.

- `std::vector< Agent< TSeq > * > sampled_population`
- `size_t sampled_population_n = 0u`
- `std::vector< size_t > population_left`
- `size_t population_left_n = 0u`

Agents features

Optionally, a model can include an external data source pointing to agents information. The data can then be access through the `Agent::operator()` method.

- `double * agents_data = nullptr`
- `size_t agents_data_ncols = 0u`

Friends

- `class Agent< TSeq >`
- `class AgentsSample< TSeq >`
- `class DataBase< TSeq >`
- `class Queue< TSeq >`

Tool Mixers

These functions combine the effects tools have to deliver a single effect. For example, wearing a mask, been vaccinated, and the immune system combine together to jointly reduce the susceptibility for a given virus.

- `MixerFun< TSeq > susceptibility_reduction_mixer = susceptibility_reduction_mixer_default<TSeq>`
- `MixerFun< TSeq > transmission_reduction_mixer = transmission_reduction_mixer_default<TSeq>`
- `MixerFun< TSeq > recovery_enhancer_mixer = recovery_enhancer_mixer_default<TSeq>`

- MixerFun< TSeq > **death_reduction_mixer** = death_reduction_mixer_default<TSeq>
- std::vector< epiworld_double > **array_double_tmp**
- std::vector< [Virus](#)< TSeq > * > **array_virus_tmp**
- virtual [Model](#)< TSeq > * **clone_ptr** ()

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

- **Model** ()
- **Model** (const [Model](#)< TSeq > &m)
- **Model** ([Model](#)< TSeq > &m)
- **Model** ([Model](#)< TSeq > &&m)
- [Model](#)< TSeq > & **operator=** (const [Model](#)< TSeq > &m)
- virtual ~**Model** ()

12.23.1 Detailed Description

```
template<typename TSeq>
class epiworld::Model< TSeq >
```

Core class of epiworld.

The model class provides the wrapper that puts together [Agent](#), [Virus](#), and [Tools](#).

Template Parameters

<i>TSeq</i>	Type of sequence. In principle, users can build models in which virus and human sequence is represented as numeric vectors (if needed.)
-------------	---

12.23.2 Member Function Documentation

12.23.2.1 add_globalevent()

```
template<typename TSeq >
void Model< TSeq >::add_globalevent (
    std::function< void(Model< TSeq > *)> fun,
    std::string name = "A global action",
    int date = -99 ) [inline]
```

Set a global action.

Parameters

<i>fun</i>	A function to be called on the prescribed date
<i>name</i>	Name of the action.
<i>date</i>	Integer indicating when the function is called (see details)

When date is less than zero, then the function is called at the end of every day. Otherwise, the function will be called only at the end of the indicated date.

```
int idx_agent_,
int idx_object_ ) [inline], [protected]
```

Construct a new [Event](#) object.

Parameters

<i>agent_</i>	Agent over which the action will be called
<i>virus_</i>	Virus pointer included in the action
<i>tool_</i>	Tool pointer included in the action
<i>entity_</i>	Entity pointer included in the action
<i>new_↔ state_</i>	New state of the agent
<i>call_</i>	Function the action will call
<i>queue_</i>	Change in the queue
<i>idx_↔ agent_</i>	Location of agent in object.
<i>idx_↔ object_</i>	Location of object in agent.

12.23.2.5 events_run()

```
template<typename TSeq >
void Model< TSeq >::events_run [inline]
```

Executes the stored action.

Parameters

<i>model_↔ _</i>	Model over which it will be executed.
----------------------	---

12.23.2.6 load_agents_entities_ties()

```
template<typename TSeq >
void Model< TSeq >::load_agents_entities_ties (
    std::string fn,
    int skip ) [inline]
```

Associate agents-entities from a file.

The structure of the file should be two columns separated by space. The first column indexing between 0 and nagents-1, and the second column between 0 and nentities - 1.

Parameters

<i>fn</i>	Path to the file.
<i>skip</i>	How many rows to skip.

12.23.2.7 reset()

```
template<typename TSeq >
void Model< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented in `ModelSURV< TSeq >`, `ModelSIRMixing< TSeq >`, `ModelSIRLogit< TSeq >`, `ModelSIRDCONN< TSeq >`, `ModelSIRCONN< TSeq >`, `ModelSEIRMixingQuarantine< TSeq >`, `ModelSEIRMixing< TSeq >`, `ModelSEIRDCONN< TSeq >`, `ModelSEIRCONN< TSeq >`, `ModelMeaslesMixing< TSeq >`, `epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >`, `epiworld::epimodels::ModelMeaslesMixing< TSeq >`, `epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >`, `epiworld::epimodels::ModelMeaslesSchool< TSeq >`, `epiworld::epimodels::ModelSIRMixing< TSeq >`, `epiworld::epimodels::ModelSIRLogit< TSeq >`, `epiworld::epimodels::ModelSEIRDCONN< TSeq >`, `epiworld::epimodels::ModelSIRCONN< TSeq >`, `epiworld::epimodels::ModelSEIRCONN< TSeq >`, `epiworld::epimodels::ModelSIRCONN< TSeq >`, and `epiworld::epimodels::ModelSIRCONN< TSeq >`.

12.23.2.8 run_multiple()

```
template<typename TSeq >
void Model< TSeq >::run_multiple (
    epiworld_fast_uint ndays,
    epiworld_fast_uint nexperiments,
    int seed_ = -1,
    std::function< void(size_t, Model< TSeq > *)> fun = make_save_run<TSeq>(),
    bool reset = true,
    bool verbose = true,
    int nthreads = 1 ) [inline]
```

Parameters

<code>ndays</code>	Multiple runs of the simulation
--------------------	---------------------------------

12.23.2.9 set_agents_data()

```
template<typename TSeq >
void Model< TSeq >::set_agents_data (
```

```
double * data_,
size_t ncols_ ) [inline]
```

Set the agents data object.

The data should be an array with the data stored in a column major order, i.e., by column.

Parameters

<i>data</i> ↔ _	Pointer to the first element of an array of size <code>size() * ncols_</code> .
<i>ncols</i> ↔ _	Number of features included in the data.

12.23.2.10 set_name()

```
template<typename TSeq >
void Model< TSeq >::set_name (
    std::string name ) [inline]
```

Set the name object.

Parameters

<i>name</i>	
-------------	--

12.23.2.11 write_data()

```
template<typename TSeq >
void Model< TSeq >::write_data (
    std::string fn_virus_info,
    std::string fn_virus_hist,
    std::string fn_tool_info,
    std::string fn_tool_hist,
    std::string fn_total_hist,
    std::string fn_transmission,
    std::string fn_transition,
    std::string fn_reproductive_number,
    std::string fn_generation_time ) const [inline]
```

Wrapper of `DataBase::write_data`

Parameters

<i>fn_virus_info</i>	Filename. Information about the virus.
<i>fn_virus_hist</i>	Filename. History of the virus.
<i>fn_tool_info</i>	Filename. Information about the tool.

Parameters

<i>fn_tool_hist</i>	Filename. History of the tool.
<i>fn_total_hist</i>	Filename. Aggregated history (state)
<i>fn_transmission</i>	Filename. Transmission history.
<i>fn_transition</i>	Filename. Markov transition history.
<i>fn_reproductive_number</i>	Filename. Case by case reproductive number

12.23.3 Member Data Documentation

12.23.3.1 initial_states_fun

```
template<typename TSeq >
std::function<void (Model<TSeq>*)> epiworld::Model< TSeq >::initial_states_fun [protected]
```

Initial value:

```
= [] (Model<TSeq> * )
    -> void {}
```

Function to distribute states. Goes along with the function

12.23.3.2 rbinomd

```
template<typename TSeq >
std::binomial_distribution epiworld::Model< TSeq >::rbinomd [protected]
```

Initial value:

```
=
    std::binomial_distribution<>()
```

12.23.3.3 rexp

```
template<typename TSeq >
std::exponential_distribution epiworld::Model< TSeq >::rexp [protected]
```

Initial value:

```
=
    std::exponential_distribution<>()
```

12.23.3.4 `rgammad`

```
template<typename TSeq >  
std::gamma_distribution epiworld::Model< TSeq >::rgammad [protected]
```

Initial value:

```
=  
    std::gamma_distribution<>()
```

12.23.3.5 `rgeomd`

```
template<typename TSeq >  
std::geometric_distribution epiworld::Model< TSeq >::rgeomd [protected]
```

Initial value:

```
=  
    std::geometric_distribution<>()
```

12.23.3.6 `rlognormald`

```
template<typename TSeq >  
std::lognormal_distribution epiworld::Model< TSeq >::rlognormald [protected]
```

Initial value:

```
=  
    std::lognormal_distribution<>()
```

12.23.3.7 `rnbinomd`

```
template<typename TSeq >  
std::negative_binomial_distribution epiworld::Model< TSeq >::rnbinomd [protected]
```

Initial value:

```
=  
    std::negative_binomial_distribution<>()
```

12.23.3.8 `rnormd`

```
template<typename TSeq >  
std::normal_distribution epiworld::Model< TSeq >::rnormd [protected]
```

Initial value:

```
=  
    std::normal_distribution<>(0.0)
```

12.23.3.9 rpoissd

```
template<typename TSeq >
std::poisson_distribution epiworld::Model< TSeq >::rpoissd [protected]
```

Initial value:

```
=
    std::poisson_distribution<>()
```

12.23.3.10 runifd

```
template<typename TSeq >
std::uniform_real_distribution epiworld::Model< TSeq >::runifd [protected]
```

Initial value:

```
=
    std::uniform_real_distribution<> (0.0, 1.0)
```

12.23.3.11 time_elapsed

```
template<typename TSeq >
std::chrono::duration<epiworld_double, std::micro> epiworld::Model< TSeq >::time_elapsed [protected]
```

Initial value:

```
=
    std::chrono::duration<epiworld_double, std::micro>::zero()
```

The documentation for this class was generated from the following file:

- epiworld.hpp

12.24 Model< TSeq > Class Template Reference

Core class of epiworld.

```
#include <model-bones.hpp>
```

Set the backup object

backup can be used to restore the entire object after a run. This can be useful if the user wishes to have individuals start with the same network from the beginning.

- void **set_backup** ()

Random number generation

Parameters

eng	Random number generator
s	Seed

- void **set_rand_engine** (std::shared_ptr< std::mt19937 > &eng)
- std::shared_ptr< std::mt19937 > & **get_rand_endgine** ()

- void **set_rand_binom** (int n, epiworld_double p)

- void **set_rand_nbinom** (int n, epiworld_double p)
- void **set_rand_geom** (epiworld_double p)
- void **set_rand_pois** (epiworld_double lambda)
- epiworld_double **runif** ()
- epiworld_double **runif** (epiworld_double a, epiworld_double b)
- epiworld_double **rnorm** ()
- epiworld_double **rnorm** (epiworld_double mean, epiworld_double sd)
- epiworld_double **rgamma** ()
- epiworld_double **rgamma** (epiworld_double alpha, epiworld_double beta)
- epiworld_double **rexp** ()
- epiworld_double **rexp** (epiworld_double lambda)
- epiworld_double **rlognormal** ()
- epiworld_double **rlognormal** (epiworld_double mean, epiworld_double shape)
- int **rbinom** ()
- int **rbinom** (int n, epiworld_double p)
- int **rnbinom** ()
- int **rnbinom** (int n, epiworld_double p)
- int **rgeom** ()
- int **rgeom** (epiworld_double p)
- int **rpoiss** ()
- int **rpoiss** (epiworld_double lambda)

Add Virus/Tool to the model

This is done before the model has been initialized.

Parameters

v	<i>Virus to be added</i>
t	<i>Tool to be added</i>
preval	<i>Initial prevalence (initial state.) It can be specified as a proportion (between zero and one,) or an integer indicating number of individuals.</i>

- void **add_virus** ([Virus](#)< TSeq > &v)
- void **add_tool** ([Tool](#)< TSeq > &t)
- void **add_entity** ([Entity](#)< TSeq > e)
- void **rm_virus** (size_t virus_pos)
- void **rm_tool** (size_t tool_pos)
- void **rm_entity** (size_t entity_id)

Accessing population of the model

Parameters

fn	<i>std::string Filename of the edgelist file.</i>
skip	<i>int Number of lines to skip in fn.</i>
directed	<i>bool Whether the graph is directed or not.</i>
size	<i>Size of the network.</i>
al	<i>AdjList to read into the model.</i>

- void **agents_from_adjlist** (std::string fn, int size, int skip=0, bool directed=false)
 - void **agents_from_edgelist** (const std::vector< int > &source, const std::vector< int > &target, int size, bool directed)
 - void **agents_from_adjlist** ([AdjList](#) al)
 - bool **is_directed** () const
 - std::vector< [Agent](#)< TSeq > > & **get_agents** ()
- Returns a reference to the vector of agents.*

- [Agent](#)< TSeq > & **get_agent** (size_t i)
- std::vector< epiworld_fast_uint > [get_agents_states](#) () const
Returns a vector with the states of the agents.
- std::vector< [Viruses_const](#)< TSeq > > [get_agents_viruses](#) () const
Returns a const vector with the viruses of the agents.
- std::vector< [Viruses](#)< TSeq > > [get_agents_viruses](#) ()
Returns a vector with the viruses of the agents.
- std::vector< [Entity](#)< TSeq > > & **get_entities** ()
- [Entity](#)< TSeq > & **get_entity** (size_t entity_id, int *entity_pos=nullptr)
- [Model](#)< TSeq > & **agents_smallworld** (epiworld_fast_uint n=1000, epiworld_fast_uint k=5, bool d=false, epiworld_double p=.01)
- void **agents_empty_graph** (epiworld_fast_uint n=1000)

Functions to run the model

Parameters

seed	<i>Seed to be used for Pseudo-RNG.</i>
ndays	<i>Number of days (steps) of the simulation.</i>
fun	<i>In the case of <code>run_multiple</code>, a function that is called after each experiment.</i>

- void **update_state** ()
- void **mutate_virus** ()
- void **next** ()
- virtual [Model](#)< TSeq > & **run** (epiworld_fast_uint ndays, int seed=-1)
Runs the simulation (after initialization)
- void **run_multiple** (epiworld_fast_uint ndays, epiworld_fast_uint nexperiments, int seed_=-1, std::function< void(size_t, [Model](#)< TSeq > *)> fun=make_save_run< TSeq >(), bool [reset](#)=true, bool verbose=true, int nthreads=1)

Rewire the network preserving the degree sequence.

This implementation assumes an undirected network, thus if $\{(i,j), (k,l)\} \rightarrow \{(i,l), (k,j)\}$, the reciprocal is also true, i.e., $\{(j,i), (l,k)\} \rightarrow \{(j,k), (l,i)\}$.

Parameters

proportion	<i>Proportion of ties to be rewired.</i>
------------	--

Returns

A rewired version of the network.

- void **set_rewire_fun** (std::function< void(std::vector< [Agent](#)< TSeq > > *, [Model](#)< TSeq > *, epiworld_double)> fun)
- void **set_rewire_prop** (epiworld_double prop)
- epiworld_double **get_rewire_prop** () const
- void **rewire** ()

Export the network data in edgelist form

Parameters

fn	<i>std::string. File name.</i>
source	<i>Integer vector</i>
target	<i>Integer vector</i>

When passing the source and target, the function will write the edgelist on those.

- void **write_edgelist** (std::string fn) const
- void **write_edgelist** (std::vector< int > &source, std::vector< int > &target) const

Manage state (states) in the model

The functions `get_state` return the current values for the states included in the model.

Parameters

lab	<code>std::string</code> Name of the state.
-----	---

Returns

`add_state*` returns nothing.

`get_state_*` returns a vector of pairs with the states and their labels.

- void **add_state** (std::string lab, UpdateFun< TSeq > fun=nullptr)
- const std::vector< std::string > & **get_states** () const
- size_t **get_n_states** () const
- const std::vector< UpdateFun< TSeq > > & **get_state_fun** () const
- void **print_state_codes** () const

Initial states

These functions are called before the simulation starts.

Parameters

proportions↔	Vector of proportions for each state.
—	
queue_	Vector of queue for each state.

- virtual `Model< TSeq > & initial_states` (std::vector< double >, std::vector< int >)

Setting and accessing parameters from the model

`Tools` can incorporate parameters included in the model. Internally, parameters in the tool are stored as pointers to an `std::map<>` of parameters in the model. Using the `epiworld_fast_uint` method directly fetches the parameters in the order these were added to the tool. Accessing parameters via the `std::string` method involves searching the parameter directly in the `std::map<>` member of the model (so it is not recommended.)

The `par()` function members are aliases for `get_param()`.

In the case of the function `read_params`, users can pass a file listing parameters to be included in the model.

Each line in the file should have the following structure:

```
[name of parameter 1]: [value in double]
[name of parameter 2]: [value in double]
...
```

The only condition for parameter names is that these do not include a colon.

Parameters

initial_val	
pname	Name of the parameter to add or to fetch
fn	Path to the file containing parameters

Returns

The current value of the parameter in the model.

- `epiworld_double` **add_param** (`epiworld_double` initial_val, `std::string` pname, `bool` overwrite=false)
- `Model`< `TSeq` > & **read_params** (`std::string` fn, `bool` overwrite=false)
- `epiworld_double` **get_param** (`epiworld_fast_uint` k)
- `epiworld_double` **get_param** (`std::string` pname)
- `void` **set_param** (`std::string` pname, `epiworld_double` val)
- `epiworld_double` **par** (`std::string` pname) `const`

Set the user data object

Parameters

names	<i>string vector with the names of the variables.</i>
-------	---

- `void` **set_user_data** (`std::vector`< `std::string` > names)
- `[@`
- `void` **add_user_data** (`epiworld_fast_uint` j, `epiworld_double` x)
- `void` **add_user_data** (`std::vector`< `epiworld_double` > x)
- `UserData`< `TSeq` > & **get_user_data** ()

Queuing system

When queueing is on, the model will keep track of which agents are either in risk of exposure or exposed. This then is used at each step to act only on the aforementioned agents.

- `void` **queueing_on** ()
Activates the queueing system (default.)
- `Model`< `TSeq` > & **queueing_off** ()
Deactivates the queueing system.
- `bool` **is_queueing_on** () `const`
Query if the queueing system is on.
- `Queue`< `TSeq` > & **get_queue** ()
Retrieve the `Queue` object.

Get the susceptibility reduction object

Parameters

v	
---	--

Returns

epiworld_double

- `void` **set_susceptibility_reduction_mixer** (`MixerFun`< `TSeq` > fun)
- `void` **set_transmission_reduction_mixer** (`MixerFun`< `TSeq` > fun)
- `void` **set_recovery_enhancer_mixer** (`MixerFun`< `TSeq` > fun)
- `void` **set_death_reduction_mixer** (`MixerFun`< `TSeq` > fun)

Protected Member Functions

- `void` **dist_tools** ()
- `void` **dist_virus** ()

- void **dist_entities** ()
- void **chrono_start** ()
- void **chrono_end** ()
- void **events_add** (Agent< TSeq > *agent_, VirusPtr< TSeq > virus_, ToolPtr< TSeq > tool_, Entity< TSeq > *entity_, epiworld_fast_int new_state_, epiworld_fast_int queue_, EventFun< TSeq > call_, int idx_↵ agent_, int idx_object_)

Construct a new [Event](#) object.

Protected Attributes

- std::string **name** = ""
Name of the model.
- DataBase< TSeq > **db** = DataBase<TSeq>(*this)
- std::vector< Agent< TSeq > > **population** = {}
- bool **using_backup** = true
- std::vector< Agent< TSeq > > **population_backup** = {}
- bool **directed** = false
- std::vector< VirusPtr< TSeq > > **viruses** = {}
- std::vector< ToolPtr< TSeq > > **tools** = {}
- std::vector< Entity< TSeq > > **entities** = {}
- std::vector< Entity< TSeq > > **entities_backup** = {}
- std::shared_ptr< std::mt19937 > **engine** = std::make_shared< std::mt19937 >()
- std::uniform_real_distribution **runifd**
- std::normal_distribution **rnormd**
- std::gamma_distribution **rgammad**
- std::lognormal_distribution **rlognormald**
- std::exponential_distribution **rexp**
- std::binomial_distribution **rbinomd**
- std::negative_binomial_distribution **rnbinomd**
- std::geometric_distribution **rgeomd**
- std::poisson_distribution **rpoissd**
- std::function< void(std::vector< Agent< TSeq > > *, Model< TSeq > *, epiworld_double)> **rewire_fun**
- epiworld_double **rewire_prop** = 0.0
- std::map< std::string, epiworld_double > **parameters**
- epiworld_fast_uint **ndays** = 0
- [Progress](#) **pb**
- std::vector< UpdateFun< TSeq > > **state_fun** = {}
Functions to update states.
- std::vector< std::string > **states_labels** = {}
Labels of the states.
- std::function< void(Model< TSeq > *)> **initial_states_fun**
- epiworld_fast_uint **nstates** = 0u
- bool **verbose** = true
- int **current_date** = 0
- std::chrono::time_point< std::chrono::steady_clock > **time_start**
- std::chrono::time_point< std::chrono::steady_clock > **time_end**
- std::chrono::duration< epiworld_double, std::micro > **time_elapsed**
- epiworld_fast_uint **n_replicates** = 0u
- std::vector< GlobalEvent< TSeq > > **globalevents**
- [Queue](#)< TSeq > **queue**
- bool **use_queuing** = true
- std::vector< Event< TSeq > > **events** = {}
Variables used to keep track of the events to be made regarding viruses.

- `epiworld_fast_uint nactions = 0u`

Auxiliary variables for `AgentsSample<TSeq>` iterators

These variables+objects are used by the `AgentsSample<TSeq>` class for building efficient iterators over agents. The idea is to reduce the memory allocation, so only during the first call of `AgentsSample<TSeq>::AgentsSample(Model<TSeq>)` these vectors are allocated.

- `std::vector< Agent< TSeq > * > sampled_population`
- `size_t sampled_population_n = 0u`
- `std::vector< size_t > population_left`
- `size_t population_left_n = 0u`

Agents features

Optionally, a model can include an external data source pointing to agents information. The data can then be access through the `Agent::operator()` method.

- `double * agents_data = nullptr`
- `size_t agents_data_ncols = 0u`

Friends

- `class Agent< TSeq >`
- `class AgentsSample< TSeq >`
- `class DataBase< TSeq >`
- `class Queue< TSeq >`

Tool Mixers

These functions combine the effects tools have to deliver a single effect. For example, wearing a mask, been vaccinated, and the immune system combine together to jointly reduce the susceptibility for a given virus.

- `MixerFun< TSeq > susceptibility_reduction_mixer = susceptibility_reduction_mixer_default<TSeq>`
- `MixerFun< TSeq > transmission_reduction_mixer = transmission_reduction_mixer_default<TSeq>`
- `MixerFun< TSeq > recovery_enhancer_mixer = recovery_enhancer_mixer_default<TSeq>`
- `MixerFun< TSeq > death_reduction_mixer = death_reduction_mixer_default<TSeq>`
- `std::vector< epiworld_double > array_double_tmp`
- `std::vector< Virus< TSeq > * > array_virus_tmp`
- `virtual Model< TSeq > * clone_ptr ()`

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

- `Model ()`
- `Model (const Model< TSeq > &m)`
- `Model (Model< TSeq > &m)`
- `Model (Model< TSeq > &&m)`
- `Model< TSeq > & operator= (const Model< TSeq > &m)`
- `virtual ~Model ()`

12.24.1 Detailed Description

```
template<typename TSeq>
class Model< TSeq >
```

Core class of epiworld.

The model class provides the wrapper that puts together `Agent`, `Virus`, and `Tools`.

Template Parameters

<i>TSeq</i>	Type of sequence. In principle, users can build models in which virus and human sequence is represented as numeric vectors (if needed.)
-------------	---

12.24.2 Member Function Documentation

12.24.2.1 add_globalevent()

```
template<typename TSeq >
void Model< TSeq >::add_globalevent (
    std::function< void(Model< TSeq > *)> fun,
    std::string name = "A global action",
    int date = -99 ) [inline]
```

Set a global action.

Parameters

<i>fun</i>	A function to be called on the prescribed date
<i>name</i>	Name of the action.
<i>date</i>	Integer indicating when the function is called (see details)

When date is less than zero, then the function is called at the end of every day. Otherwise, the function will be called only at the end of the indicated date.

12.24.2.2 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * Model< TSeq >::clone_ptr [inline], [protected], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented in [ModelMeaslesSchool< TSeq >](#), and [ModelMeaslesMixingRiskQuarantine< TSeq >](#).

12.24.2.3 draw()

```
template<typename TSeq >
void Model< TSeq >::draw (
```

```
DiagramType diagram_type = DiagramType::Mermaid,
const std::string & fn_output = "",
bool self = false ) [inline]
```

Draws a mermaid diagram of the model.

Parameters

<i>model</i>	The model to draw.
<i>fn_output</i>	The name of the file to write the diagram. If empty, the diagram will be printed to the standard output.
<i>self</i>	Whether to allow self-transitions.

12.24.2.4 events_add()

```
template<typename TSeq >
void Model< TSeq >::events_add (
    Agent< TSeq > * agent_,
    VirusPtr< TSeq > virus_,
    ToolPtr< TSeq > tool_,
    Entity< TSeq > * entity_,
    epiworld_fast_int new_state_,
    epiworld_fast_int queue_,
    EventFun< TSeq > call_,
    int idx_agent_,
    int idx_object_ ) [inline], [protected]
```

Construct a new [Event](#) object.

Parameters

<i>agent_</i>	Agent over which the action will be called
<i>virus_</i>	Virus pointer included in the action
<i>tool_</i>	Tool pointer included in the action
<i>entity_</i>	Entity pointer included in the action
<i>new_↔ state_</i>	New state of the agent
<i>call_</i>	Function the action will call
<i>queue_</i>	Change in the queue
<i>idx_↔ agent_</i>	Location of agent in object.
<i>idx_↔ object_</i>	Location of object in agent.

12.24.2.5 events_run()

```
template<typename TSeq >
void Model< TSeq >::events_run [inline]
```

Executes the stored action.

Parameters

<i>model</i> ↔	Model over which it will be executed.
—	

12.24.2.6 load_agents_entities_ties()

```
template<typename TSeq >
void Model< TSeq >::load_agents_entities_ties (
    std::string fn,
    int skip ) [inline]
```

Associate agents-entities from a file.

The structure of the file should be two columns separated by space. The first column indexing between 0 and *nagents*-1, and the second column between 0 and *nentities* - 1.

Parameters

<i>fn</i>	Path to the file.
<i>skip</i>	How many rows to skip.

12.24.2.7 reset()

```
template<typename TSeq >
void Model< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented in [ModelMeaslesSchool< TSeq >](#), and [ModelMeaslesMixingRiskQuarantine< TSeq >](#).

12.24.2.8 run_multiple()

```
template<typename TSeq >
void Model< TSeq >::run_multiple (
    epiworld_fast_uint ndays,
    epiworld_fast_uint nexperiments,
    int seed_ = -1,
    std::function< void(size_t, Model< TSeq > *)> fun = make_save_run<TSeq>(),
    bool reset = true,
    bool verbose = true,
    int nthreads = 1 ) [inline]
```

Parameters

<i>ndays</i>	Multiple runs of the simulation
--------------	---------------------------------

12.24.2.9 set_agents_data()

```
template<typename TSeq >
void Model< TSeq >::set_agents_data (
    double * data_,
    size_t ncols_ ) [inline]
```

Set the agents data object.

The data should be an array with the data stored in a column major order, i.e., by column.

Parameters

<i>data</i> ↔ —	Pointer to the first element of an array of size <code>size() * ncols_</code> .
<i>ncols</i> ↔ —	Number of features included in the data.

12.24.2.10 set_name()

```
template<typename TSeq >
void Model< TSeq >::set_name (
    std::string name ) [inline]
```

Set the name object.

Parameters

<i>name</i>	
-------------	--

12.24.2.11 write_data()

```
template<typename TSeq >
void Model< TSeq >::write_data (
    std::string fn_virus_info,
    std::string fn_virus_hist,
    std::string fn_tool_info,
    std::string fn_tool_hist,
    std::string fn_total_hist,
    std::string fn_transmission,
    std::string fn_transition,
    std::string fn_reproductive_number,
    std::string fn_generation_time ) const [inline]
```

Wrapper of DataBase::write_data

Parameters

<i>fn_virus_info</i>	Filename. Information about the virus.
<i>fn_virus_hist</i>	Filename. History of the virus.
<i>fn_tool_info</i>	Filename. Information about the tool.
<i>fn_tool_hist</i>	Filename. History of the tool.
<i>fn_total_hist</i>	Filename. Aggregated history (state)
<i>fn_transmission</i>	Filename. Transmission history.
<i>fn_transition</i>	Filename. Markov transition history.
<i>fn_reproductive_number</i>	Filename. Case by case reproductive number

12.24.3 Member Data Documentation

12.24.3.1 initial_states_fun

```
template<typename TSeq >
std::function<void (Model<TSeq>*)> Model< TSeq >::initial_states_fun [protected]
```

Initial value:

```
= [] (Model<TSeq> * )
    -> void {}
```

Function to distribute states. Goes along with the function

12.24.3.2 rbinomd

```
template<typename TSeq >
std::binomial_distribution Model< TSeq >::rbinomd [protected]
```

Initial value:

```
=
    std::binomial_distribution<>()
```

12.24.3.3 rexp

```
template<typename TSeq >  
std::exponential_distribution Model< TSeq >::rexp [protected]
```

Initial value:

```
=  
    std::exponential_distribution<>()
```

12.24.3.4 rgammad

```
template<typename TSeq >  
std::gamma_distribution Model< TSeq >::rgammad [protected]
```

Initial value:

```
=  
    std::gamma_distribution<>()
```

12.24.3.5 rgeomd

```
template<typename TSeq >  
std::geometric_distribution Model< TSeq >::rgeomd [protected]
```

Initial value:

```
=  
    std::geometric_distribution<>()
```

12.24.3.6 rlognormald

```
template<typename TSeq >  
std::lognormal_distribution Model< TSeq >::rlognormald [protected]
```

Initial value:

```
=  
    std::lognormal_distribution<>()
```

12.24.3.7 rnbinomd

```
template<typename TSeq >  
std::negative_binomial_distribution Model< TSeq >::rnbinomd [protected]
```

Initial value:

```
=  
    std::negative_binomial_distribution<>()
```

12.24.3.8 rnormd

```
template<typename TSeq >
std::normal_distribution Model< TSeq >::rnormd [protected]
```

Initial value:

```
=
    std::normal_distribution<>(0.0)
```

12.24.3.9 rpoissd

```
template<typename TSeq >
std::poisson_distribution Model< TSeq >::rpoissd [protected]
```

Initial value:

```
=
    std::poisson_distribution<>()
```

12.24.3.10 runifd

```
template<typename TSeq >
std::uniform_real_distribution Model< TSeq >::runifd [protected]
```

Initial value:

```
=
    std::uniform_real_distribution<>(0.0, 1.0)
```

12.24.3.11 time_elapsed

```
template<typename TSeq >
std::chrono::duration<epiworld_double, std::micro> Model< TSeq >::time_elapsed [protected]
```

Initial value:

```
=
    std::chrono::duration<epiworld_double, std::micro>::zero()
```

12.27.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelDiffNet< TSeq >
```

Template for a [Network](#) Diffusion [Model](#).

Parameters

<i>model</i>	A Model<TSeq> object where to set up the SIR.
<i>vname</i>	std::string Name of the virus
<i>initial_prevalence</i>	epiworld_double Initial prevalence
<i>initial_efficacy</i>	epiworld_double Initial susceptibility_reduction of the immune system
<i>initial_recovery</i>	epiworld_double Initial recovery rate of the immune system

12.29.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelMeaslesMixing< TSeq >
```

Measles model with population mixing, quarantine, and contact tracing.

This class implements a Measles epidemiological model based on the SEIR framework with additional features including:

- Population mixing based on contact matrices
- Measles-specific disease progression: Susceptible → Exposed → Prodromal → Rash
- Prodromal individuals are infectious (replace the "Infected" state in SEIR)
- Rash individuals are no longer infectious but can be detected for isolation
- Quarantine measures for exposed contacts during contact tracing
- Isolation policies for detected individuals during the rash state
- Contact tracing with configurable success rates
- Hospitalization of severe cases
- Individual willingness to comply with public health measures

The model supports 13 distinct states:

- Susceptible: Individuals who can become infected
- Exposed: Infected but not yet infectious (incubation period)
- Prodromal: Infectious individuals in the community (replaces "Infected" in SEIR)
- Rash: Non-infectious individuals with visible symptoms (detection occurs here)
- Isolated: Detected individuals in self-isolation
- Isolated Recovered: Recovered individuals still in isolation
- Detected Hospitalized: Hospitalized individuals who were contact-traced
- Quarantined Exposed: Exposed individuals in quarantine due to contact tracing
- Quarantined Susceptible: Susceptible individuals in quarantine due to contact tracing
- Quarantined Prodromal: Prodromal individuals in quarantine due to contact tracing
- Quarantined Recovered: Recovered individuals in quarantine due to contact tracing
- Hospitalized: Individuals requiring hospital care
- Recovered: Individuals who have recovered and gained immunity

Template Parameters

<code>TSeq</code>	Type for genetic sequences (default: <code>EPI_DEFAULT_TSEQ</code>)
-------------------	--

epiworld_double prop_vaccinated,
epiworld_double contact_tracing_success_rate = 1.0,
epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]

```

Constructs a [ModelMeaslesMixing](#) object.

Template for a Measles model with population mixing, quarantine, and contact tracing.

Parameters

<i>model</i>	A reference to an existing ModelMeaslesMixing object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).
<i>model</i>	A ModelMeaslesMixing<TSeq> object where to set up the model.
<i>n</i>	Number of agents in the population
<i>prevalence</i>	Initial prevalence (proportion of infected individuals)

Parameters

<i>contact_rate</i>	Average number of contacts (interactions) per step
<i>transmission_rate</i>	Probability of transmission per contact
<i>vax_efficacy</i>	The efficacy of the vaccine
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine
<i>incubation_period</i>	Average incubation period in days
<i>prodromal_period</i>	Average prodromal period in days
<i>rash_period</i>	Average rash period in days
<i>contact_matrix</i>	Contact matrix specifying mixing patterns between population groups
<i>hospitalization_rate</i>	Rate at which infected individuals are hospitalized
<i>hospitalization_period</i>	Average duration of hospitalization in days
<i>days_undetected</i>	Average number of days an infected individual remains undetected
<i>quarantine_period</i>	Duration of quarantine in days for exposed contacts
<i>quarantine_willingness</i>	Proportion of individuals willing to comply with quarantine
<i>isolation_willingness</i>	Proportion of individuals willing to self-isolate when detected
<i>isolation_period</i>	Duration of isolation in days for detected infected individuals
<i>prop_vaccinated</i>	Proportion of vaccinated agents
<i>contact_tracing_success_rate</i>	Probability of successfully identifying contacts during tracing
<i>contact_tracing_days_prior</i>	Number of days prior to detection for contact tracing

12.29.2.2 `ModelMeaslesMixing()` [2/2]

```
template<typename TSeq >
ModelMeaslesMixing< TSeq >::ModelMeaslesMixing (
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double vax_efficacy,
    epiworld_double vax_reduction_recovery_rate,
    epiworld_double incubation_period,
    epiworld_double prodromal_period,
    epiworld_double rash_period,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double prop_vaccinated,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a `ModelMeaslesMixing` object.

Parameters

<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.29.3 Member Function Documentation

12.29.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelMeaslesMixing< TSeq >::clone_ptr [inline], [virtual]
```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.29.3.2 get_agent_quarantine_triggered()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< size_t > epiworld::epimodels::ModelMeaslesMixing< TSeq >::get_agent_quarantine←
_triggered ( ) const [inline]
```

Get the quarantine trigger status for all agents.

Returns

Vector indicating quarantine process status for each agent

12.29.3.3 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< double > epiworld::epimodels::ModelMeaslesMixing< TSeq >::get_contact_matrix ( )
const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.29.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > epiworld::epimodels::ModelMeaslesMixing< TSeq >::get_isolation_willingness
( ) const [inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.29.3.5 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > epiworld::epimodels::ModelMeaslesMixing< TSeq >::get_quarantine_willingness
( ) const [inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.29.3.6 initial_states()

```
template<typename TSeq >
ModelMeaslesMixing< TSeq > & ModelMeaslesMixing< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions</i> ↔ —	Double vector with two elements: <ul style="list-style-type: none"> • [0]: The proportion of initially infected individuals who start in the exposed state. • [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.29.3.7 run()

```
template<typename TSeq >
ModelMeaslesMixing< TSeq > & ModelMeaslesMixing< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.29.3.8 set_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void epiworld::epimodels::ModelMeaslesMixing< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

```

Constructs a [ModelMeaslesMixing](#) object.

Template for a Measles model with population mixing, quarantine, and contact tracing.

Parameters

<i>model</i>	A reference to an existing ModelMeaslesMixing object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.

Parameters

<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).
<i>model</i>	A ModelMeaslesMixing<TSeq> object where to set up the model.
<i>n</i>	Number of agents in the population
<i>prevalence</i>	Initial prevalence (proportion of infected individuals)
<i>contact_rate</i>	Average number of contacts (interactions) per step
<i>transmission_rate</i>	Probability of transmission per contact
<i>vax_efficacy</i>	The efficacy of the vaccine
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine
<i>incubation_period</i>	Average incubation period in days
<i>prodromal_period</i>	Average prodromal period in days
<i>rash_period</i>	Average rash period in days
<i>contact_matrix</i>	Contact matrix specifying mixing patterns between population groups
<i>hospitalization_rate</i>	Rate at which infected individuals are hospitalized
<i>hospitalization_period</i>	Average duration of hospitalization in days
<i>days_undetected</i>	Average number of days an infected individual remains undetected
<i>quarantine_period</i>	Duration of quarantine in days for exposed contacts
<i>quarantine_willingness</i>	Proportion of individuals willing to comply with quarantine
<i>isolation_willingness</i>	Proportion of individuals willing to self-isolate when detected
<i>isolation_period</i>	Duration of isolation in days for detected infected individuals
<i>prop_vaccinated</i>	Proportion of vaccinated agents
<i>contact_tracing_success_rate</i>	Probability of successfully identifying contacts during tracing
<i>contact_tracing_days_prior</i>	Number of days prior to detection for contact tracing

12.30.2.2 ModelMeaslesMixing() [2/2]

```

template<typename TSeq >

epiworld_double quarantine_willingness,
epiworld_double isolation_willingness,
epiworld_fast_int isolation_period,
epiworld_double prop_vaccinated,
epiworld_double contact_tracing_success_rate = 1.0,
epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]

```

Constructs a [ModelMeaslesMixing](#) object.

Parameters

<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.30.3 Member Function Documentation

12.30.3.1 clone_ptr()

```

template<typename TSeq >
Model< TSeq > * ModelMeaslesMixing< TSeq >::clone_ptr [inline], [virtual]

```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.30.3.2 get_agent_quarantine_triggered()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< size_t > ModelMeaslesMixing< TSeq >::get_agent_quarantine_triggered ( ) const
[inline]
```

Get the quarantine trigger status for all agents.

Returns

Vector indicating quarantine process status for each agent

12.30.3.3 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< double > ModelMeaslesMixing< TSeq >::get_contact_matrix ( ) const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.30.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > ModelMeaslesMixing< TSeq >::get_isolation_willingness ( ) const [inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.30.3.5 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > ModelMeaslesMixing< TSeq >::get_quarantine_willingness ( ) const [inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.30.3.6 initial_states()

```
template<typename TSeq >
ModelMeaslesMixing< TSeq > & ModelMeaslesMixing< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with two elements: <ul style="list-style-type: none"> [0]: The proportion of initially infected individuals who start in the exposed state. [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.30.3.7 run()

```
template<typename TSeq >
ModelMeaslesMixing< TSeq > & ModelMeaslesMixing< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.30.3.8 set_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void ModelMeaslesMixing< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

Additional Inherited Members

12.31.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >
```

Measles model with population mixing and risk-based quarantine strategies.

This class extends the Measles epidemiological model to support different quarantine strategies based on exposure risk levels:

- **High Risk:** Unvaccinated agents who share entity membership with the case
- **Medium Risk:** Unvaccinated agents who contacted an infected individual but don't share entity membership
- **Low Risk:** Other unvaccinated agents

Each risk level can have different quarantine durations, allowing for targeted public health interventions. The model also includes enhanced detection during active quarantine periods.

Disease progression follows the same states as [ModelMeaslesMixing](#): Susceptible → Exposed → Prodromal → Rash → Recovered

Template Parameters

<i>TSeq</i>	Type for genetic sequences (default: EPI_DEFAULT_TSEQ)
-------------	--

12.31.2 Constructor & Destructor Documentation

12.31.2.1 ModelMeaslesMixingRiskQuarantine() [1/2]

```

template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq >::ModelMeaslesMixingRiskQuarantine (
    ModelMeaslesMixingRiskQuarantine< TSeq > & model,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double vax_efficacy,
    epiworld_double incubation_period,
    epiworld_double prodromal_period,
    epiworld_double rash_period,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period_high,
    epiworld_fast_int quarantine_period_medium,
    epiworld_fast_int quarantine_period_low,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double prop_vaccinated,
    epiworld_double detection_rate_quarantine,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]

```

Constructs a [ModelMeaslesMixingRiskQuarantine](#) object.

Parameters

<i>model</i>	A reference to an existing ModelMeaslesMixingRiskQuarantine object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.

Parameters

<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period_high</i>	The duration of quarantine in days for high-risk contacts.
<i>quarantine_period_medium</i>	The duration of quarantine in days for medium-risk contacts.
<i>quarantine_period_low</i>	The duration of quarantine in days for low-risk contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>detection_rate_quarantine</i>	The detection rate during active quarantine periods.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.31.2.2 `ModelMeaslesMixingRiskQuarantine()` [2/2]

```
template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq >::ModelMeaslesMixingRiskQuarantine (
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double vax_efficacy,
    epiworld_double incubation_period,
    epiworld_double prodromal_period,
    epiworld_double rash_period,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period_high,
    epiworld_fast_int quarantine_period_medium,
    epiworld_fast_int quarantine_period_low,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double prop_vaccinated,
    epiworld_double detection_rate_quarantine,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a `ModelMeaslesMixingRiskQuarantine` object.

Parameters

<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.

Parameters

<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period_high</i>	The duration of quarantine in days for high-risk contacts.
<i>quarantine_period_medium</i>	The duration of quarantine in days for medium-risk contacts.
<i>quarantine_period_low</i>	The duration of quarantine in days for low-risk contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>detection_rate_quarantine</i>	The detection rate during active quarantine periods.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.31.3 Member Function Documentation

12.31.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelMeaslesMixingRiskQuarantine< TSeq >::clone_ptr [inline], [virtual]
```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.31.3.2 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::get_contact_matrix ( )
const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.31.3.3 get_days_quarantine_triggered()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::get_days_quarantine_triggered ( ) const [inline]
```

Get the total number of quarantines that have occurred.

Returns

The number of quarantines

12.31.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::get_isolation_willingness ( ) const [inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.31.3.5 get_quarantine_risk_level()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
const auto& epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::get_quarantine_risk_level ( ) const [inline]
```

Get the risk level assigned to each agent for quarantine purposes.

Returns

Vector of integers representing risk levels (0=low, 1=medium, 2=high)

12.31.3.6 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::get_quarantine_willingness ( ) const [inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.31.3.7 initial_states()

```
template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq > & ModelMeaslesMixingRiskQuarantine< TSeq >::initial←
_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with two elements:
—	<ul style="list-style-type: none"> • [0]: The proportion of initially infected individuals who start in the exposed state. • [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.31.3.8 run()

```
template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq > & ModelMeaslesMixingRiskQuarantine< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.31.3.9 set_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void epiworld::epimodels::ModelMeaslesMixingRiskQuarantine< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

```

Constructs a [ModelMeaslesMixingRiskQuarantine](#) object.

Parameters

<i>model</i>	A reference to an existing ModelMeaslesMixingRiskQuarantine object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period_high</i>	The duration of quarantine in days for high-risk contacts.
<i>quarantine_period_medium</i>	The duration of quarantine in days for medium-risk contacts.
<i>quarantine_period_low</i>	The duration of quarantine in days for low-risk contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>detection_rate_quarantine</i>	The detection rate during active quarantine periods.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.32.2.2 ModelMeaslesMixingRiskQuarantine() [2/2]

```

template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq >::ModelMeaslesMixingRiskQuarantine (
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double vax_efficacy,
    epiworld_double incubation_period,
    epiworld_double prodromal_period,
    epiworld_double rash_period,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period_high,
    epiworld_fast_int quarantine_period_medium,
    epiworld_fast_int quarantine_period_low,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double prop_vaccinated,
    epiworld_double detection_rate_quarantine,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]

```

Constructs a [ModelMeaslesMixingRiskQuarantine](#) object.

Parameters

<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>incubation_period</i>	The incubation period of the disease in the model.
<i>prodromal_period</i>	The prodromal period of the disease in the model.
<i>rash_period</i>	The rash period of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period_high</i>	The duration of quarantine in days for high-risk contacts.
<i>quarantine_period_medium</i>	The duration of quarantine in days for medium-risk contacts.
<i>quarantine_period_low</i>	The duration of quarantine in days for low-risk contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>detection_rate_quarantine</i>	The detection rate during active quarantine periods.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.32.3 Member Function Documentation

12.32.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelMeaslesMixingRiskQuarantine< TSeq >::clone_ptr [inline], [virtual]
```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from [Model< TSeq >](#).

12.32.3.2 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto ModelMeaslesMixingRiskQuarantine< TSeq >::get_contact_matrix ( ) const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.32.3.3 get_days_quarantine_triggered()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto ModelMeaslesMixingRiskQuarantine< TSeq >::get_days_quarantine_triggered ( ) const [inline]
```

Get the total number of quarantines that have occurred.

Returns

The number of quarantines

12.32.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto ModelMeaslesMixingRiskQuarantine< TSeq >::get_isolation_willingness ( ) const [inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.32.3.5 get_quarantine_risk_level()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
const auto& ModelMeaslesMixingRiskQuarantine< TSeq >::get_quarantine_risk_level ( ) const
[inline]
```

Get the risk level assigned to each agent for quarantine purposes.

Returns

Vector of integers representing risk levels (0=low, 1=medium, 2=high)

12.32.3.6 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
auto ModelMeaslesMixingRiskQuarantine< TSeq >::get_quarantine_willingness ( ) const [inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.32.3.7 initial_states()

```
template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq > & ModelMeaslesMixingRiskQuarantine< TSeq >::initial←
_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions</i> ↔ —	Double vector with two elements: <ul style="list-style-type: none"> • [0]: The proportion of initially infected individuals who start in the exposed state. • [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [Model< TSeq >](#).

12.32.3.8 run()

```
template<typename TSeq >
ModelMeaslesMixingRiskQuarantine< TSeq > & ModelMeaslesMixingRiskQuarantine< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [Model< TSeq >](#).

12.32.3.9 set_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void ModelMeaslesMixingRiskQuarantine< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

Additional Inherited Members

12.33.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelMeaslesSchool< TSeq >
```

Template for a Measles model with quarantine.

Parameters

<i>TSeq</i>	The type of the sequence to be used.
-------------	--------------------------------------

This model can be described as a SEIHR model with isolation and quarantine. The infectious state is divided into prodromal and rash phases. Furthermore, the quarantine state includes exposed, susceptible, prodromal, and recovered states.

The quarantine process is triggered any time that an agent with rash is detected. The agent is then isolated and all agents who are unvaccinated are quarantined. Isolated agents then may be moved out of the isolation in `isolation_↵_period` days.

12.33.2 Constructor & Destructor Documentation

12.33.2.1 ModelMeaslesSchool()

```
template<typename TSeq >
ModelMeaslesSchool< TSeq >::ModelMeaslesSchool (
    ModelMeaslesSchool< TSeq > & model,
    epiworld_fast_uint n,
    epiworld_fast_uint n_exposed,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double vax_efficacy,
    epiworld_double vax_reduction_recovery_rate,
    epiworld_double incubation_period,
    epiworld_double prodromal_period,
    epiworld_double rash_period,
    epiworld_double days_undetected,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double prop_vaccinated,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_fast_int isolation_period ) [inline]
```

Parameters

<i>n</i>	The number of agents in the system.
<i>n_exposed</i>	The number of exposed agents in the system.
<i>contact_rate</i>	The rate of contact between agents.
<i>transmission_rate</i>	The rate of transmission of the virus.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the virus.
<i>prodromal_period</i>	The prodromal period of the virus.
<i>rash_period</i>	The rash period of the virus.
<i>days_undetected</i>	The number of days the virus goes undetected.
<i>hospitalization_rate</i>	The rate of hospitalization.

Parameters

<i>hospitalization_period</i>	The duration of hospitalization.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>quarantine_period</i>	The number of days for quarantine.
<i>quarantine_willingness</i>	The willingness to be quarantined.
<i>isolation_period</i>	The number of days for isolation.

12.33.3 Member Function Documentation

12.33.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelMeaslesSchool< TSeq >::clone_ptr [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.33.3.2 quarantine_agents()

```
template<typename TSeq >
void ModelMeaslesSchool< TSeq >::quarantine_agents [inline]
```

Quarantine agents that are in the system.

The flow should be:

- The function only runs if the quarantine status is active.
- Agents who are in quarantine, isolation, removed, or hospitalized are ignored.
- Agents who are in the RASH state are isolated.
- Vaccinated agents are ignored.
- Susceptible, Exposed, and Prodromal agents are moved to the QUARANTINED_* state.
- At the end of the function, the quarantine status is set false.

12.33.3.3 reset()

```
template<typename TSeq >
void ModelMeaslesSchool< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

Additional Inherited Members

12.34.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class ModelMeaslesSchool< TSeq >
```

Template for a Measles model with quarantine.

Parameters

<i>TSeq</i>	The type of the sequence to be used.
-------------	--------------------------------------

This model can be described as a SEIHR model with isolation and quarantine. The infectious state is divided into prodromal and rash phases. Furthermore, the quarantine state includes exposed, susceptible, prodromal, and recovered states.

The quarantine process is triggered any time that an agent with rash is detected. The agent is then isolated and all agents who are unvaccinated are quarantined. Isolated agents then may be moved out of the isolation in `isolation_↔_period` days.

12.34.2 Constructor & Destructor Documentation

12.34.2.1 ModelMeaslesSchool()

```
template<typename TSeq >
ModelMeaslesSchool< TSeq >::ModelMeaslesSchool (
    ModelMeaslesSchool< TSeq > & model,
    epiworld_fast_uint n,
    epiworld_fast_uint n_exposed,
    epiworld_double contact_rate,
```

```

epiworld_double transmission_rate,
epiworld_double vax_efficacy,
epiworld_double vax_reduction_recovery_rate,
epiworld_double incubation_period,
epiworld_double prodromal_period,
epiworld_double rash_period,

epiworld_double hospitalization_rate,
epiworld_double hospitalization_period,
epiworld_double prop_vaccinated,
epiworld_fast_int quarantine_period,
epiworld_double quarantine_willingness,
epiworld_fast_int isolation_period ) [inline]

```

Parameters

<i>n</i>	The number of agents in the system.
<i>n_exposed</i>	The number of exposed agents in the system.
<i>contact_rate</i>	The rate of contact between agents.
<i>transmission_rate</i>	The rate of transmission of the virus.
<i>vax_efficacy</i>	The efficacy of the vaccine.
<i>vax_reduction_recovery_rate</i>	The reduction in recovery rate due to the vaccine.
<i>incubation_period</i>	The incubation period of the virus.
<i>prodromal_period</i>	The prodromal period of the virus.
<i>rash_period</i>	The rash period of the virus.
<i>days_undetected</i>	The number of days the virus goes undetected.
<i>hospitalization_rate</i>	The rate of hospitalization.
<i>hospitalization_period</i>	The duration of hospitalization.
<i>prop_vaccinated</i>	The proportion of vaccinated agents.
<i>quarantine_period</i>	The number of days for quarantine.
<i>quarantine_willingness</i>	The willingness to be quarantined.
<i>isolation_period</i>	The number of days for isolation.

12.34.3 Member Function Documentation

12.34.3.1 clone_ptr()

```

template<typename TSeq >
Model< TSeq > * ModelMeaslesSchool< TSeq >::clone_ptr [inline], [virtual]

```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from [Model< TSeq >](#).

12.34.3.2 quarantine_agents()

```
template<typename TSeq >
void ModelMeaslesSchool< TSeq >::quarantine_agents [inline]
```

Quarantine agents that are in the system.

The flow should be:

- The function only runs if the quarantine status is active.
- Agents who are in quarantine, isolation, removed, or hospitalized are ignored.
- Agents who are in the RASH state are isolated.
- Vaccinated agents are ignored.
- Susceptible, Exposed, and Prodromal agents are moved to the QUARANTINED_* state.
- At the end of the function, the quarantine status is set false.

12.34.3.3 reset()

```
template<typename TSeq >
void ModelMeaslesSchool< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

<i>recovery_rate</i>	epiworld_double Recovery rate of the virus.

12.36.2 Member Function Documentation

12.36.2.1 initial_states()

```
template<typename TSeq >
ModelSEIR< TSeq > & ModelSEIR< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set up the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with the following values:
—	<ul style="list-style-type: none"> • 0: Proportion of non-infected agents who are removed. • 1: Proportion of exposed agents to be set as infected.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.36.3 Member Data Documentation

12.36.3.1 update_exposed_seir

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
epiworld::UpdateFun<TSeq> ModelSEIR< TSeq >::update_exposed_seir
```

Initial value:

```
= [] (
    epiworld::Agent<TSeq> * p,
    epiworld::Model<TSeq> * m
) -> void {
    auto v = p->get_virus();
    if (m->runif() < 1.0/(v->get_incubation(m)))
        p->change_state(m, ModelSEIR<TSeq>::INFECTED);
    return;
}
```

12.36.3.2 update_infected_seir

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
epiworld::UpdateFun<TSeq> ModelSEIR< TSeq >::update_infected_seir
```

Initial value:

```
= [] (
    epiworld::Agent<TSeq> * p,
    epiworld::Model<TSeq> * m
) -> void {
    if (m->runif() < (m->par("Recovery rate")))
        p->rm_virus(m);
    return;
}
```

12.37.1 Constructor & Destructor Documentation

12.37.1.1 `ModelSEIRCONN()`

```
template<typename TSeq >
ModelSEIRCONN< TSeq >::ModelSEIRCONN (
    ModelSEIRCONN< TSeq > & model,
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate ) [inline]
```

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

<i>model</i>	A <code>Model<TSeq></code> object where to set up the SIR.
<i>vname</i>	<code>std::string</code> Name of the virus
<i>prevalence</i>	Initial prevalence (proportion)
<i>contact_rate</i>	Average number of contacts (interactions) per step.
<i>transmission_rate</i>	Probability of transmission
<i>recovery_rate</i>	Probability of recovery

12.37.2 Member Function Documentation

12.37.2.1 `clone_ptr()`

```
template<typename TSeq >
Model< TSeq > * ModelSEIRCONN< TSeq >::clone_ptr [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from `epiworld::Model< EPI_DEFAULT_TSEQ >`.

12.37.2.2 `initial_states()`

```
template<typename TSeq >
ModelSEIRCONN< TSeq > & ModelSEIRCONN< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions</i> ↔	Double vector with a single element:
—	<ul style="list-style-type: none"> The proportion of non-infected individuals who have recovered.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.37.2.3 reset()

```
template<typename TSeq >
void ModelSEIRCONN< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    epiworld_double death_rate ) [inline]
```

Constructor for the SEIRD model.

Template Parameters

<i>TSeq</i>	Type of the sequence used in the model.
-------------	---

Parameters

<i>model</i>	Reference to the SEIRD model.
<i>vname</i>	Name of the model.
<i>prevalence</i>	Prevalence of the disease.
<i>transmission_rate</i>	Transmission rate of the disease.
<i>avg_incubation_days</i>	Average incubation period of the disease.
<i>recovery_rate</i>	Recovery rate of the disease.
<i>death_rate</i>	Death rate of the disease.

12.39.2.2 ModelSEIRD() [2/2]

```
template<typename TSeq >
ModelSEIRD< TSeq >::ModelSEIRD (

12.43.1 Constructor & Destructor Documentation

12.43.1.1 ModelSEIRMixing() [1/2]

```
template<typename TSeq >
ModelSEIRMixing< TSeq >::ModelSEIRMixing (
    ModelSEIRMixing< TSeq > & model,
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix ) [inline]
```

Constructs a [ModelSEIRMixing](#) object.

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model.

Parameters

<i>model</i>	A reference to an existing ModelSEIRMixing object.
<i>vname</i>	The name of the ModelSEIRMixing object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.
<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>model</i>	A Model<TSeq> object where to set up the SIR.
<i>vname</i>	std::string Name of the virus
<i>prevalence</i>	Initial prevalence (proportion)
<i>contact_rate</i>	Average number of contacts (interactions) per step.
<i>transmission_rate</i>	Probability of transmission
<i>recovery_rate</i>	Probability of recovery

12.43.1.2 ModelSEIRMixing() [2/2]

```
template<typename TSeq >
ModelSEIRMixing< TSeq >::ModelSEIRMixing (
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix ) [inline]
```

Constructs a [ModelSEIRMixing](#) object.

Parameters

<i>vname</i>	The name of the ModelSEIRMixing object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.
<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.

12.43.2 Member Function Documentation

12.43.2.1 `clone_ptr()`

```
template<typename TSeq >
Model< TSeq > * ModelSEIRMixing< TSeq >::clone_ptr [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.43.2.2 `initial_states()`

```
template<typename TSeq >
ModelSEIRMixing< TSeq > & ModelSEIRMixing< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with a single element:
—	<ul style="list-style-type: none"> The proportion of non-infected individuals who have recovered.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.43.2.3 reset()

```
template<typename TSeq >
void ModelSEIRMixing< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from `epiworld::Model< EPI_DEFAULT_TSEQ >`.

The documentation for this class was generated from the following file:

12.45.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >
```

SEIR model with mixing, quarantine, and contact tracing.

This class implements a Susceptible-Exposed-Infected-Removed (SEIR) epidemiological model with additional features including:

- Population mixing based on contact matrices
- Quarantine measures for exposed contacts
- Isolation policies for detected infected individuals
- Contact tracing with configurable success rates
- Hospitalization of severe cases
- Individual willingness to comply with public health measures

The model supports 10 distinct states:

- Susceptible: Individuals who can become infected
- Exposed: Infected but not yet infectious (incubation period)
- Infected: Infectious individuals in the community
- Isolated: Detected infected individuals in self-isolation
- Detected Hospitalized: Hospitalized individuals who were contact-traced
- Quarantined Susceptible: Susceptible individuals in quarantine due to contact tracing
- Quarantined Exposed: Exposed individuals in quarantine due to contact tracing
- Isolated Recovered: Recovered individuals still in isolation
- Hospitalized: Individuals requiring hospital care
- Recovered: Individuals who have recovered and gained immunity

Template Parameters

<i>TSeq</i>	Type for genetic sequences (default: EPI_DEFAULT_TSEQ)
-------------	--

12.45.2 Constructor & Destructor Documentation

12.45.2.1 ModelSEIRMixingQuarantine() [1/2]

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq >::ModelSEIRMixingQuarantine (
    ModelSEIRMixingQuarantine< TSeq > & model,
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a [ModelSEIRMixingQuarantine](#) object.

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model with mixing, quarantine, and contact tracing.

Parameters

<i>model</i>	A reference to an existing ModelSEIRMixingQuarantine object.
<i>vname</i>	The name of the ModelSEIRMixingQuarantine object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.
<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).
<i>model</i>	A ModelSEIRMixingQuarantine<TSeq> object where to set up the SEIR model.
<i>vname</i>	Name of the virus
<i>n</i>	Number of agents in the population
<i>prevalence</i>	Initial prevalence (proportion of infected individuals)

Parameters

<i>contact_rate</i>	Average number of contacts (interactions) per step
<i>transmission_rate</i>	Probability of transmission per contact
<i>avg_incubation_days</i>	Average incubation period in days
<i>recovery_rate</i>	Probability of recovery per day
<i>contact_matrix</i>	Contact matrix specifying mixing patterns between population groups
<i>hospitalization_rate</i>	Rate at which infected individuals are hospitalized
<i>hospitalization_period</i>	Average duration of hospitalization in days
<i>days_undetected</i>	Average number of days an infected individual remains undetected
<i>quarantine_period</i>	Duration of quarantine in days for exposed contacts
<i>quarantine_willingness</i>	Proportion of individuals willing to comply with quarantine
<i>isolation_willingness</i>	Proportion of individuals willing to self-isolate when detected
<i>isolation_period</i>	Duration of isolation in days for detected infected individuals
<i>contact_tracing_success_rate</i>	Probability of successfully identifying contacts during tracing
<i>contact_tracing_days_prior</i>	Number of days prior to detection for contact tracing

12.45.2.2 `ModelSEIRMixingQuarantine()` [2/2]

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq >::ModelSEIRMixingQuarantine (
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a `ModelSEIRMixingQuarantine` object.

Parameters

<i>vname</i>	The name of the <code>ModelSEIRMixingQuarantine</code> object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.

Parameters

<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.45.3 Member Function Documentation

12.45.3.1 `clone_ptr()`

```
template<typename TSeq >
Model< TSeq > * ModelSEIRMixingQuarantine< TSeq >::clone_ptr [inline], [virtual]
```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from `epiworld::Model< EPI_DEFAULT_TSEQ >`.

12.45.3.2 `get_agent_quarantine_triggered()`

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< size_t > epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >::get_agent_↵
quarantine_triggered ( ) const [inline]
```

Get the quarantine trigger status for all agents.

Returns

Vector indicating quarantine process status for each agent

12.45.3.3 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< double > epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >::get_contact_↵
matrix ( ) const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.45.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >::get_isolation_↵
willingness ( ) const [inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.45.3.5 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >::get_quarantine_↵
willingness ( ) const [inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.45.3.6 initial_states()

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq > & ModelSEIRMixingQuarantine< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions</i> ↔ —	Double vector with two elements: <ul style="list-style-type: none"> • [0]: The proportion of initially infected individuals who start in the exposed state. • [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.45.3.7 `run()`

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq > & ModelSEIRMixingQuarantine< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.45.3.8 `set_contact_matrix()`

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void epiworld::epimodels::ModelSEIRMixingQuarantine< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

12.46.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class ModelSEIRMixingQuarantine< TSeq >
```

SEIR model with mixing, quarantine, and contact tracing.

This class implements a Susceptible-Exposed-Infected-Removed (SEIR) epidemiological model with additional features including:

- Population mixing based on contact matrices
- Quarantine measures for exposed contacts
- Isolation policies for detected infected individuals
- Contact tracing with configurable success rates
- Hospitalization of severe cases
- Individual willingness to comply with public health measures

The model supports 10 distinct states:

- Susceptible: Individuals who can become infected
- Exposed: Infected but not yet infectious (incubation period)
- Infected: Infectious individuals in the community
- Isolated: Detected infected individuals in self-isolation
- Detected Hospitalized: Hospitalized individuals who were contact-traced
- Quarantined Susceptible: Susceptible individuals in quarantine due to contact tracing
- Quarantined Exposed: Exposed individuals in quarantine due to contact tracing
- Isolated Recovered: Recovered individuals still in isolation
- Hospitalized: Individuals requiring hospital care
- Recovered: Individuals who have recovered and gained immunity

Template Parameters

<i>TSeq</i>	Type for genetic sequences (default: EPI_DEFAULT_TSEQ)
-------------	--

12.46.2 Constructor & Destructor Documentation

12.46.2.1 ModelSEIRMixingQuarantine() [1/2]

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq >::ModelSEIRMixingQuarantine (
    ModelSEIRMixingQuarantine< TSeq > & model,
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a [ModelSEIRMixingQuarantine](#) object.

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model with mixing, quarantine, and contact tracing.

Parameters

<i>model</i>	A reference to an existing ModelSEIRMixingQuarantine object.
<i>vname</i>	The name of the ModelSEIRMixingQuarantine object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.
<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model. Specified in column-major order.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).
<i>model</i>	A ModelSEIRMixingQuarantine<TSeq> object where to set up the SEIR model.
<i>vname</i>	Name of the virus
<i>n</i>	Number of agents in the population
<i>prevalence</i>	Initial prevalence (proportion of infected individuals)

Parameters

<i>contact_rate</i>	Average number of contacts (interactions) per step
<i>transmission_rate</i>	Probability of transmission per contact
<i>avg_incubation_days</i>	Average incubation period in days
<i>recovery_rate</i>	Probability of recovery per day
<i>contact_matrix</i>	Contact matrix specifying mixing patterns between population groups
<i>hospitalization_rate</i>	Rate at which infected individuals are hospitalized
<i>hospitalization_period</i>	Average duration of hospitalization in days
<i>days_undetected</i>	Average number of days an infected individual remains undetected
<i>quarantine_period</i>	Duration of quarantine in days for exposed contacts
<i>quarantine_willingness</i>	Proportion of individuals willing to comply with quarantine
<i>isolation_willingness</i>	Proportion of individuals willing to self-isolate when detected
<i>isolation_period</i>	Duration of isolation in days for detected infected individuals
<i>contact_tracing_success_rate</i>	Probability of successfully identifying contacts during tracing
<i>contact_tracing_days_prior</i>	Number of days prior to detection for contact tracing

12.46.2.2 `ModelSEIRMixingQuarantine()` [2/2]

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq >::ModelSEIRMixingQuarantine (
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double avg_incubation_days,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix,
    epiworld_double hospitalization_rate,
    epiworld_double hospitalization_period,
    epiworld_double days_undetected,
    epiworld_fast_int quarantine_period,
    epiworld_double quarantine_willingness,
    epiworld_double isolation_willingness,
    epiworld_fast_int isolation_period,
    epiworld_double contact_tracing_success_rate = 1.0,
    epiworld_fast_uint contact_tracing_days_prior = 4u ) [inline]
```

Constructs a `ModelSEIRMixingQuarantine` object.

Parameters

<i>vname</i>	The name of the <code>ModelSEIRMixingQuarantine</code> object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>avg_incubation_days</i>	The average incubation period of the disease in the model.

Parameters

<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.
<i>hospitalization_rate</i>	The rate at which infected individuals are hospitalized.
<i>hospitalization_period</i>	The average duration of hospitalization in days.
<i>days_undetected</i>	The average number of days an infected individual remains undetected.
<i>quarantine_period</i>	The duration of quarantine in days for exposed contacts.
<i>quarantine_willingness</i>	The proportion of individuals willing to comply with quarantine measures.
<i>isolation_willingness</i>	The proportion of individuals willing to self-isolate when detected.
<i>isolation_period</i>	The duration of isolation in days for detected infected individuals.
<i>contact_tracing_success_rate</i>	The probability of successfully identifying and tracing contacts (default: 1.0).
<i>contact_tracing_days_prior</i>	The number of days prior to detection for which contacts are traced (default: 4).

12.46.3 Member Function Documentation

12.46.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSEIRMixingQuarantine< TSeq >::clone_ptr [inline], [virtual]
```

Create a clone of this model.

Returns

Pointer to a new model instance with the same configuration

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.46.3.2 get_agent_quarantine_triggered()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< size_t > ModelSEIRMixingQuarantine< TSeq >::get_agent_quarantine_triggered ( )
const [inline]
```

Get the quarantine trigger status for all agents.

Returns

Vector indicating quarantine process status for each agent

12.46.3.3 get_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< double > ModelSEIRMixingQuarantine< TSeq >::get_contact_matrix ( ) const [inline]
```

Get the current contact matrix.

Returns

Vector representing the contact matrix

12.46.3.4 get_isolation_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > ModelSEIRMixingQuarantine< TSeq >::get_isolation_willingness ( ) const
[inline]
```

Get the isolation willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to self-isolate

12.46.3.5 get_quarantine_willingness()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
std::vector< bool > ModelSEIRMixingQuarantine< TSeq >::get_quarantine_willingness ( ) const
[inline]
```

Get the quarantine willingness for all agents.

Returns

Vector of boolean values indicating each agent's willingness to quarantine

12.46.3.6 initial_states()

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq > & ModelSEIRMixingQuarantine< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions</i> ↔ —	Double vector with two elements: <ul style="list-style-type: none"> • [0]: The proportion of initially infected individuals who start in the exposed state. • [1]: The proportion of initially non-infected individuals who have recovered (immune).
<i>queue_</i>	Optional vector for queuing specifications (default: empty).

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.46.3.7 run()

```
template<typename TSeq >
ModelSEIRMixingQuarantine< TSeq > & ModelSEIRMixingQuarantine< TSeq >::run (
    epiworld_fast_uint ndays,
    int seed = -1 ) [inline], [virtual]
```

Run the model simulation.

Parameters

<i>ndays</i>	Number of days to simulate
<i>seed</i>	Random seed for reproducibility (default: -1 for random seed)

Returns

Reference to this model instance

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.46.3.8 set_contact_matrix()

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
void ModelSEIRMixingQuarantine< TSeq >::set_contact_matrix (
    std::vector< double > cmat ) [inline]
```

Set the contact matrix for population mixing.

Parameters

<i>cmat</i>	Contact matrix specifying interaction rates between groups
-------------	--

Additional Inherited Members

12.51.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelSIRD< TSeq >
```

Template for a Susceptible-Infected-Removed-Deceased (SIRD) model.

12.51.2 Constructor & Destructor Documentation

12.51.2.1 ModelSIRD()

```
template<typename TSeq >
ModelSIRD< TSeq >::ModelSIRD (
    ModelSIRD< TSeq > & model,
    const std::string & vname,
    epiworld_double prevalence,
    epiworld_double transmission_rate,
    epiworld_double recovery_rate,
    epiworld_double death_rate ) [inline]
```

Constructs a new SIRD model with the given parameters.

Parameters

<i>model</i>	The SIRD model to copy from.
<i>vname</i>	The name of the vertex associated with this model.
<i>prevalence</i>	The initial prevalence of the disease in the population.
<i>transmission_rate</i>	The rate at which the disease spreads from infected to susceptible individuals.
<i>recovery_rate</i>	The rate at which infected individuals recover and become immune.
<i>death_rate</i>	The rate at which infected individuals die.

12.51.3 Member Function Documentation

12.51.3.1 initial_states()

```
template<typename TSeq >
ModelSIRD< TSeq > & ModelSIRD< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with two elements:
—	<ul style="list-style-type: none"> • The proportion of non-infected individuals who have recovered. • The proportion of non-infected individuals who have died.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

- [ModelSIRD](#) < TSeq > & [initial_states](#) (std::vector< double > proportions_, std::vector< int > queue_={})
Set the initial states of the model.
- [ModelSIRD](#) ([ModelSIRD](#) < TSeq > &model, const std::string &vname, epiworld_double prevalence, epiworld_double transmission_rate, epiworld_double recovery_rate, epiworld_double death_rate)
Constructs a new SIRD model with the given parameters.
- **ModelSIRD** (const std::string &vname, epiworld_double prevalence, epiworld_double transmission_rate, epiworld_double recovery_rate, epiworld_double death_rate)

Additional Inherited Members

12.52.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class ModelSIRD< TSeq >
```

Template for a Susceptible-Infected-Removed-Deceased (SIRD) model.

12.52.2 Constructor & Destructor Documentation

12.52.2.1 ModelSIRD()

```
template<typename TSeq >
ModelSIRD< TSeq >::ModelSIRD (
    ModelSIRD< TSeq > & model,
    const std::string & vname,
    epiworld_double prevalence,
    epiworld_double transmission_rate,
    epiworld_double recovery_rate,
    epiworld_double death_rate ) [inline]
```

Constructs a new SIRD model with the given parameters.

Parameters

<i>model</i>	The SIRD model to copy from.
<i>vname</i>	The name of the vertex associated with this model.
<i>prevalence</i>	The initial prevalence of the disease in the population.
<i>transmission_rate</i>	The rate at which the disease spreads from infected to susceptible individuals.
<i>recovery_rate</i>	The rate at which infected individuals recover and become immune.
<i>death_rate</i>	The rate at which infected individuals die.

12.52.3 Member Function Documentation

12.52.3.1 initial_states()

```
template<typename TSeq >
ModelSIRD< TSeq > & ModelSIRD< TSeq >::initial_states (
    std::vector< double > proportions_,
    std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<i>proportions_</i>	Double vector with two elements:
—	<ul style="list-style-type: none"> • The proportion of non-infected individuals who have recovered. • The proportion of non-infected individuals who have died.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.55.1 Detailed Description

```
template<typename TSeq = EPI_DEFAULT_TSEQ>
class epiworld::epimodels::ModelSIRLogit< TSeq >
```

Template for a Susceptible-Infected-Removed (SIR) model.

In this model, infection and recovery probabilities are computed using a logit model. Particularly, the probability of infection is computed as:

$$\frac{1}{1 + \exp(-(\beta_0 E_i + \sum_{i=1}^n \beta_i x_i))}$$

where β_0 is the exposure coefficient and E_i is the exposure number, β_i are the coefficients for the features x_i of the agents, and n is the number of features. The probability of recovery is computed as:

$$\frac{1}{1 + \exp(-(\sum_{i=1}^n \beta_i x_i))}$$

where β_i are the coefficients for the features x_i of the agents, and n is the number of features.

Parameters

<i>TSeq</i>	Type of the sequence (e.g. <code>std::vector</code> , <code>std::deque</code>)
-------------	---

12.55.2 Constructor & Destructor Documentation

12.55.2.1 ModelSIRLogit()

```
template<typename TSeq >
ModelSIRLogit< TSeq >::ModelSIRLogit (
    ModelSIRLogit< TSeq > & model,
    const std::string & vname,
    double * data,
    size_t ncols,
    std::vector< double > coefs_infect,
    std::vector< double > coefs_recover,
    std::vector< size_t > coef_infect_cols,
    std::vector< size_t > coef_recover_cols,
    epiworld_double transmission_rate,
    epiworld_double recovery_rate,
    epiworld_double prevalence ) [inline]
```

Template for a Susceptible-Infected-Removed (SIR) model.

Parameters

<i>vname</i>	Name of the virus.
<i>coefs_infect</i>	Double ptr. Infection coefficients.
<i>coefs_recover</i>	Double ptr. Recovery coefficients.
<i>ncoenf_infect</i>	Unsigned int. Number of infection coefficients.
<i>ncoenf_recover</i>	Unsigned int. Number of recovery coefficients.
<i>coef_infect_cols</i>	Vector<unsigned int>. Ids of infection vars.
<i>coef_recover_cols</i>	Vector<unsigned int>. Ids of recover vars.

Parameters

<i>model</i>	A Model<TSeq> object where to set up the SIR.
<i>vname</i>	std::string Name of the virus
<i>prevalence</i>	Initial prevalence (proportion)
<i>contact_rate</i>	Average number of contacts (interactions) per step.
<i>prob_transmission</i>	Probability of transmission
<i>prob_recovery</i>	Probability of recovery

12.55.3 Member Function Documentation

12.55.3.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSIRLogit< TSeq >::clone_ptr [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.55.3.2 reset()

```
template<typename TSeq >
void ModelSIRLogit< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

ModelSIRMixing< TSeq >::ModelSIRMixing (
    const std::string & vname,
    epiworld_fast_uint n,
    epiworld_double prevalence,
    epiworld_double contact_rate,
    epiworld_double transmission_rate,
    epiworld_double recovery_rate,
    std::vector< double > contact_matrix ) [inline]
```

Constructs a [ModelSIRMixing](#) object.

Parameters

<i>vname</i>	The name of the ModelSIRMixing object.
<i>n</i>	The number of entities in the model.
<i>prevalence</i>	The initial prevalence of the disease in the model.
<i>contact_rate</i>	The contact rate between entities in the model.
<i>transmission_rate</i>	The transmission rate of the disease in the model.
<i>recovery_rate</i>	The recovery rate of the disease in the model.
<i>contact_matrix</i>	The contact matrix between entities in the model.

12.58.2 Member Function Documentation

12.58.2.1 clone_ptr()

```
template<typename TSeq >
Model< TSeq > * ModelSIRMixing< TSeq >::clone_ptr [inline], [virtual]
```

Advanced usage: Makes a copy of data and returns it as undeleted pointer.

Parameters

<i>copy</i>	
-------------	--

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.58.2.2 initial_states()

```
template<typename TSeq >
ModelSIRMixing< TSeq > & ModelSIRMixing< TSeq >::initial_states (
```

```
std::vector< double > proportions_,
std::vector< int > queue_ = {} ) [inline], [virtual]
```

Set the initial states of the model.

Parameters

<code>proportions_</code>	Double vector with a single element:
—	<ul style="list-style-type: none"> The proportion of non-infected individuals who have recovered.

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.58.2.3 `reset()`

```
template<typename TSeq >
void ModelSIRMixing< TSeq >::reset [inline], [virtual]
```

Reset the model.

Resetting the model will:

- clear the database
- restore the population (if `set_backup()` was called before)
- re-distribute tools
- re-distribute viruses
- set the date to 0

Reimplemented from [epiworld::Model< EPI_DEFAULT_TSEQ >](#).

12.63 epiworld::epimodels::ModelSURV< TSeq > Class Template Reference

Inheritance diagram for epiworld::epimodels::ModelSURV< TSeq >:

Collaboration diagram for epiworld::epimodels::ModelSURV< TSeq >:

Public Member Functions

- void `reset` ()
Reset the model.

Construct a new ModelSURV object

The `ModelSURV` class simulates a surveillance model where agents can be isolated, even if asymptomatic.

Parameters

<code>vname</code>	<i>String. Name of the virus</i>
<code>prevalence</code>	<i>Integer. Number of initial cases of the virus.</i>
<code>efficacy_vax</code>	<i>Double. Efficacy of the vaccine (1 - P(acquire the disease)).</i>
<code>latent_period</code>	<i>Double. Shape parameter of a Gamma (latent_period, 1) distribution. This coincides with the expected number of latent days.</i>
<code>infect_period</code>	<i>Double. Shape parameter of a Gamma (infected_period, 1) distribution. This coincides with the expected number of infectious days.</i>
<code>prob_symptoms</code>	<i>Double. Probability of generating symptoms.</i>
<code>prop_vaccinated</code>	<i>Double. Probability of vaccination. Coincides with the initial prevalence of vaccinated individuals.</i>
<code>prop_vax_redux_transm</code>	<i>Double. Factor by which the vaccine reduces transmissibility.</i>
<code>prop_vax_redux_infect</code>	<i>Double. Factor by which the vaccine reduces the chances of becoming infected.</i>
<code>surveillance_prob</code>	<i>Double. Probability of testing an agent.</i>
<code>prob_transmission</code>	<i>Double. Raw transmission probability.</i>
<code>prob_death</code>	<i>Double. Raw probability of death for symptomatic individuals.</i>
<code>prob_noreinfect</code>	<i>Double. Probability of no re-infection.</i>

This model features the following states:

- *Susceptible*
- *Latent*
- *Symptomatic*
- *Symptomatic isolated*

- *Asymptomatic*
- *Asymptomatic isolated*
- *Recovered*
- *Removed*

Returns

An object of class `epiworld_surv`

- **ModelSURV** ()
- **ModelSURV** ([ModelSURV](#)< TSeq > &model, const std::string &vname, epiworld_fast_uint prevalence=50, epiworld_double efficacy_vax=0.9, epiworld_double latent_period=3u, epiworld_double infect_↵_period=6u, epiworld_double prob_symptoms=0.6, epiworld_double prop_vaccinated=0.25, epiworld_↵_double prop_vax_redux_transm=0.5, epiworld_double prop_vax_redux_infect=0.5, epiworld_double surveillance_prob=0.001, epiworld_double prob_transmission=1.0, epiworld_double prob_death=0.001, epiworld_double prob_noreinfect=0.9)

12.78 epiworld::ToolFunctions< TSeq > Class Template Reference

Helper class to store the functions avoiding multiple shared_pointers (we have only one for the four of these)

```
#include <epiworld.hpp>
```

Public Attributes

- ToolFun< TSeq > **susceptibility_reduction** = nullptr
- ToolFun< TSeq > **transmission_reduction** = nullptr
- ToolFun< TSeq > **recovery_enhancer** = nullptr
- ToolFun< TSeq > **death_reduction** = nullptr
- ToolToAgentFun< TSeq > **dist** = nullptr

12.78.1 Detailed Description

```
template<typename TSeq>
class epiworld::ToolFunctions< TSeq >
```

Helper class to store the functions avoiding multiple shared_pointers (we have only one for the four of these)

The documentation for this class was generated from the following file:

- epiworld.hpp

12.79 ToolFunctions< TSeq > Class Template Reference

Helper class to store the functions avoiding multiple shared_pointers (we have only one for the four of these)

```
#include <tool-bones.hpp>
```

Public Attributes

- ToolFun< TSeq > **susceptibility_reduction** = nullptr
- ToolFun< TSeq > **transmission_reduction** = nullptr
- ToolFun< TSeq > **recovery_enhancer** = nullptr
- ToolFun< TSeq > **death_reduction** = nullptr
- ToolToAgentFun< TSeq > **dist** = nullptr

12.79.1 Detailed Description

```
template<typename TSeq>
class ToolFunctions< TSeq >
```

Helper class to store the functions avoiding multiple shared_pointers (we have only one for the four of these)

The documentation for this class was generated from the following file:

- include/epiworld/tool-bones.hpp

12.80 epiworld::Tools< TSeq > Class Template Reference

Set of tools (useful for building iterators)

```
#include <epiworld.hpp>
```

Public Member Functions

- **Tools** ([Agent](#)< TSeq > &p)
- std::vector< ToolPtr< TSeq > >::iterator **begin** ()
- std::vector< ToolPtr< TSeq > >::iterator **end** ()
- ToolPtr< TSeq > & **operator**() (size_t i)
- ToolPtr< TSeq > & **operator**[] (size_t i)
- size_t **size** () const noexcept
- void **print** () const noexcept

Friends

- class **Tool**< TSeq >
- class **Agent**< TSeq >

12.80.1 Detailed Description

```
template<typename TSeq>
class epiworld::Tools< TSeq >
```

Set of tools (useful for building iterators)

Template Parameters

<i>TSeq</i>	
-------------	--

The documentation for this class was generated from the following file:

- epiworld.hpp

12.81 Tools< TSeq > Class Template Reference

Set of tools (useful for building iterators)

```
#include <tools-bones.hpp>
```

Public Member Functions

- **Tools** ([Agent](#)< TSeq > &p)
- std::vector< ToolPtr< TSeq > >::iterator **begin** ()
- std::vector< ToolPtr< TSeq > >::iterator **end** ()
- ToolPtr< TSeq > & **operator**() (size_t i)
- ToolPtr< TSeq > & **operator**[] (size_t i)

Friends

- class **Tool**< TSeq >
- class **Agent**< TSeq >

12.83.1 Detailed Description

```
template<typename TSeq>
class Tools_const< TSeq >
```

Set of [Tools](#) (const) (useful for iterators)

Template Parameters

<i>TSeq</i>	
-------------	--

The documentation for this class was generated from the following files:

- include/epiworld/agent-bones.hpp
- include/epiworld/tools-bones.hpp

12.84 epiworld::UserData< TSeq > Class Template Reference

Personalized data by the user.

```
#include <epiworld.hpp>
```

Public Member Functions

- **UserData** ([Model](#)< TSeq > &m)
- **UserData** ([Model](#)< TSeq > *m)
- **UserData** (std::vector< std::string > names)
Construct a new User Data object.
- std::vector< std::string > & **get_names** ()
- std::vector< int > & **get_dates** ()
- std::vector< epiworld_double > & **get_data** ()
- void **get_all** (std::vector< std::string > *names=nullptr, std::vector< int > *date=nullptr, std::vector< epiworld_double > *data=nullptr)
- epiworld_fast_uint **nrow** () const
- epiworld_fast_uint **ncol** () const
- void **write** (std::string fn)
- void **print** () const

Append data

Parameters

x	A vector of length <code>ncol()</code> (if vector), otherwise a <code>epiworld_double</code> .
j	Index of the data point, from 0 to <code>ncol()</code> - 1.

- void **add** (std::vector< epiworld_double > x)
- void **add** (epiworld_fast_uint j, epiworld_double x)

Access data

Parameters

i	Row (0 through <code>ndays</code> - 1.)
j	Column (0 through <code>ncols()</code>).

*Returns**epiworld_double&*

- *epiworld_double* & **operator()** (*epiworld_fast_uint* i, *epiworld_fast_uint* j)
- *epiworld_double* & **operator()** (*epiworld_fast_uint* i, *std::string* name)

Friends

- class **Model**< **TSeq** >
- class **DataBase**< **TSeq** >

12.84.1 Detailed Description

```
template<typename TSeq>
class epiworld::UserData< TSeq >
```

Personalized data by the user.

Template Parameters

<i>TSeq</i>	
-------------	--

12.84.2 Constructor & Destructor Documentation**12.84.2.1 UserData()**

```
template<typename TSeq >
UserData< TSeq >::UserData (
    std::vector< std::string > names ) [inline]
```

Construct a new User Data object.

Parameters

<i>names</i>	A vector of names. The length of the vector sets the number of columns to record.
--------------	---

The documentation for this class was generated from the following file:

- *epiworld.hpp*

12.85 UserData< TSeq > Class Template Reference

Personalized data by the user.

```
#include <userdata-bones.hpp>
```

Public Member Functions

- **UserData** ([Model](#)< TSeq > &m)
- **UserData** ([Model](#)< TSeq > *m)
- **UserData** (std::vector< std::string > names)
Construct a new User Data object.
- std::vector< std::string > & **get_names** ()
- std::vector< int > & **get_dates** ()
- std::vector< epiworld_double > & **get_data** ()
- void **get_all** (std::vector< std::string > *names=nullptr, std::vector< int > *date=nullptr, std::vector< epiworld_double > *data=nullptr)
- epiworld_fast_uint **nrow** () const
- epiworld_fast_uint **ncol** () const
- void **write** (std::string fn)
- void **print** () const

Append data

Parameters

x	A vector of length <code>ncol()</code> (if vector), otherwise a <code>epiworld_double</code> .
j	Index of the data point, from 0 to <code>ncol()</code> - 1.

- void **add** (std::vector< epiworld_double > x)
- void **add** (epiworld_fast_uint j, epiworld_double x)

Access data

Parameters

i	Row (0 through <code>ndays</code> - 1.)
j	Column (0 through <code>ncols()</code>).

Returns

`epiworld_double&`

- epiworld_double & **operator()** (epiworld_fast_uint i, epiworld_fast_uint j)
- epiworld_double & **operator()** (epiworld_fast_uint i, std::string name)

Friends

- class **Model**< TSeq >
- class **DataBase**< TSeq >

12.85.1 Detailed Description

```
template<typename TSeq>
class UserData< TSeq >
```

Personalized data by the user.

Template Parameters

<i>TSeq</i>	
-------------	--

12.85.2 Constructor & Destructor Documentation

12.85.2.1 UserData()

```
template<typename TSeq >
UserData< TSeq >::UserData (
    std::vector< std::string > names ) [inline]
```

Construct a new User Data object.

Parameters

<i>names</i>	A vector of names. The length of the vector sets the number of columns to record.
--------------	---

The documentation for this class was generated from the following files:

- include/epiworld/database-bones.hpp
- include/epiworld/userdata-bones.hpp
- include/epiworld/userdata-meat.hpp

12.86 epiworld::vecHasher< T > Struct Template Reference

Vector hasher.

```
#include <epiworld.hpp>
```

Public Member Functions

- `std::size_t operator() (std::vector< T > const &dat) const` noexcept

12.86.1 Detailed Description

```
template<typename T>
struct epiworld::vecHasher< T >
```

Vector hasher.

Template Parameters

<i>T</i>	
----------	--

The documentation for this struct was generated from the following file:

- epiworld.hpp

12.87 vecHasher< T > Struct Template Reference

Vector hasher.

```
#include <misc.hpp>
```

Public Member Functions

- `std::size_t operator() (std::vector< T > const &dat) const` noexcept

12.87.1 Detailed Description

```
template<typename T>
struct vecHasher< T >
```

Vector hasher.

Template Parameters

<i>T</i>	
----------	--

The documentation for this struct was generated from the following file:

- include/epiworld/misc.hpp

12.88 epiworld::Virus< TSeq > Class Template Reference

[Virus](#).

```
#include <epiworld.hpp>
```

Public Member Functions

- **Virus** (std::string name="unknown virus")
- **Virus** (std::string name, epiworld_double prevalence, bool as_proportion)
- void **mutate** (Model< TSeq > *model)
- void **set_mutation** (MutFun< TSeq > fun)
- **EPI_TYPENAME_TRAITS** (TSeq, int) get_sequence()
- void **set_sequence** (TSeq sequence)

- void **set_agent** (Agent< TSeq > *p)
- void **set_date** (int d)
- int **get_date** () const
- void **set_id** (int idx)
- int **get_id** () const
- void **set_name** (std::string name)
- std::string **get_name** () const
- bool **operator==** (const Virus< TSeq > &other) const
- bool **operator!=** (const Virus< TSeq > &other) const
- void **print** () const

Get and set the tool functions

Parameters

v	<i>The virus over which to operate</i>
fun	<i>the function to be used</i>

Returns

epiworld_double

- epiworld_double **get_prob_infecting** (Model< TSeq > *model)
- epiworld_double **get_prob_recovery** (Model< TSeq > *model)
- epiworld_double **get_prob_death** (Model< TSeq > *model)
- epiworld_double **get_incubation** (Model< TSeq > *model)
- void **post_recovery** (Model< TSeq > *model)

- void **set_prob_recovery_fun** (VirusFun< TSeq > fun)
- void **set_prob_death_fun** (VirusFun< TSeq > fun)
- void **set_incubation_fun** (VirusFun< TSeq > fun)
- void **set_prob_infecting** (const epiworld_double *prob)
- void **set_prob_recovery** (const epiworld_double *prob)
- void **set_prob_death** (const epiworld_double *prob)
- void **set_incubation** (const epiworld_double *prob)
- void **set_prob_infecting** (epiworld_double prob)
- void **set_prob_recovery** (epiworld_double prob)
- void **set_prob_death** (epiworld_double prob)
- void **set_incubation** (epiworld_double prob)

Get and set the state and queue

After applied, viruses can change the state and affect the queue of agents. These function sets the default values, which are retrieved when adding or removing a virus does not specify a change in state or in queue.

Parameters

init	After the virus/tool is added to the agent.
end	After the virus/tool is removed.
removed	After the agent (Agent) is removed.

- void **set_state** (epiworld_fast_int init, epiworld_fast_int end, epiworld_fast_int removed=-99)
 - void **set_queue** (epiworld_fast_int init, epiworld_fast_int end, epiworld_fast_int removed=-99)
 - void **get_state** (epiworld_fast_int *init, epiworld_fast_int *end, epiworld_fast_int *removed=nullptr)
 - void **get_queue** (epiworld_fast_int *init, epiworld_fast_int *end, epiworld_fast_int *removed=nullptr)
-
- void [distribute](#) ([Model](#)< TSeq > *model)
Get information about the prevalence of the virus.
 - void **set_distribution** (VirusToAgentFun< TSeq > fun)

Friends

- class **Agent**< TSeq >
- class **Model**< TSeq >
- class **DataBase**< TSeq >
- void **default_add_virus** ([Event](#)< TSeq > &a, [Model](#)< TSeq > *m)
- void **default_rm_virus** ([Event](#)< TSeq > &a, [Model](#)< TSeq > *m)

12.88.1 Detailed Description

```
template<typename TSeq>
class epiworld::Virus< TSeq >
```

[Virus](#).

Template Parameters

<i>TSeq</i>	
-------------	--

Raw transmissibility of a virus should be a function of its genetic sequence. Nonetheless, transmissibility can be reduced as a result of having one or more tools to fight the virus. Because of this, transmissibility should be a function of the agent.

The documentation for this class was generated from the following file:

- epiworld.hpp

12.89 Virus< TSeq > Class Template Reference

[Virus](#).

```
#include <virus-bones.hpp>
```

13.2.1 Detailed Description

Template for a Measles model with population mixing, quarantine, and contact tracing.

13.2.2 Macro Definition Documentation

13.2.2.1 GET_MODEL

```
#define GET_MODEL(  
    model,  
    output )
```

Value:

```
auto * output = dynamic_cast< ModelMeaslesMixing<TSeq> * >( (model) ); \  
assert((output) != nullptr);
```

13.2.2.2 SAMPLE_FROM_PROBS

```
#define SAMPLE_FROM_PROBS(  
    n,  
    ans )
```

Value:

```
size_t ans; \  
epiworld_double p_total = m->runif(); \  
for (ans = 0u; ans < n; ++ans) \  
{ \  
    if (p_total < m->array_double_tmp[ans]) \  
        break; \  
    m->array_double_tmp[ans + 1] += m->array_double_tmp[ans]; \  
}
```

13.3 include/epiworld/models/measlesmixingriskquarantine.hpp File Reference

Template for a Measles model with population mixing and risk-based quarantine.

This graph shows which files directly or indirectly include this file:

Classes

- class [ModelMeaslesMixingRiskQuarantine< TSeq >](#)
Measles model with population mixing and risk-based quarantine strategies.

Macros

- `#define COL_MAJOR_POS(i, j, n) (j * n + i)`
- `#define GET_MODEL(model, output)`
- `#define SAMPLE_FROM_PROBS(n, ans)`
Macro to sample from a list of probabilities.

13.3.1 Detailed Description

Template for a Measles model with population mixing and risk-based quarantine.

13.3.2 Macro Definition Documentation

13.3.2.1 GET_MODEL

```
#define GET_MODEL(  
    model,  
    output )
```

Value:

```
auto * output = dynamic_cast< ModelMeaslesMixingRiskQuarantine<TSeq> * >( (model) ); \
assert((output) != nullptr);
```

13.3.2.2 SAMPLE_FROM_PROBS

```
#define SAMPLE_FROM_PROBS(  
    n,  
    ans )
```

Value:

```
int ans; \
epiworld_double p_total = m->runif(); \
for (ans = 0; ans < static_cast<int>(n); ans++) \
{ \
    if (p_total < m->array_double_tmp[ans]) \
        break; \
    m->array_double_tmp[ans + 1] += m->array_double_tmp[ans]; \
};
```

Macro to sample from a list of probabilities.

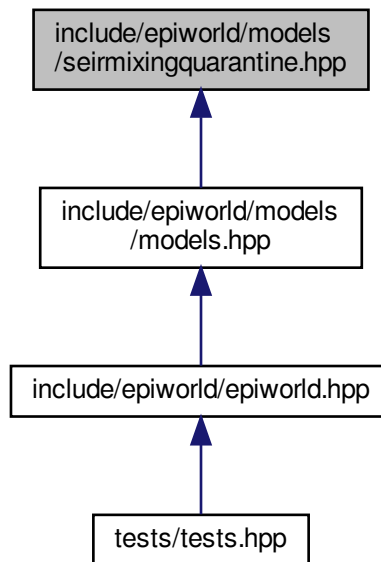

Returns

The index of the sampled probability; and the total length if none is found, returns n.

13.4 include/epiworld/models/seirmixingquarantine.hpp File Reference

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model with mixing, quarantine, and contact tracing.

This graph shows which files directly or indirectly include this file:

Classes

- class [ModelSEIRMixingQuarantine< TSeq >](#)
SEIR model with mixing, quarantine, and contact tracing.

Macros

- #define **MM**(i, j, n) $j * n + i$
- #define **GET_MODEL**(model, output)
- #define **SAMPLE_FROM_PROBS**(n, ans)

13.4.1 Detailed Description

Template for a Susceptible-Exposed-Infected-Removed (SEIR) model with mixing, quarantine, and contact tracing.

13.4.2 Macro Definition Documentation

13.4.2.1 GET_MODEL

```
#define GET_MODEL(  
    model,  
    output )
```

Value:

```
auto * output = dynamic_cast< ModelSEIRMixingQuarantine<TSeq> * >( (model) ); \  
assert( (output) != nullptr);
```

13.4.2.2 SAMPLE_FROM_PROBS

```
#define SAMPLE_FROM_PROBS(  
    n,  
    ans )
```

Value:

```
size_t ans; \  
epiworld_double p_total = m->runif(); \  
for (ans = 0u; ans < n; ++ans) \  
{ \  
    if (p_total < m->array_double_tmp[ans]) \  
        break; \  
    m->array_double_tmp[ans + 1] += m->array_double_tmp[ans]; \  
}
```
